

# TRX40 DESIGNARE

## User's Manual

Rev. 1301

12ME-TR4DES-1301R

For more product details, please visit GIGABYTE's website.

To reduce the impacts on global warming, the packaging materials of this product are recyclable and reusable. GIGABYTE works with you to protect the environment.

## **Copyright**

© 2021 GIGA-BYTE TECHNOLOGY CO., LTD. All rights reserved.

The trademarks mentioned in this manual are legally registered to their respective owners.

## **Disclaimer**

Information in this manual is protected by copyright laws and is the property of GIGABYTE. Changes to the specifications and features in this manual may be made by GIGABYTE without prior notice. No part of this manual may be reproduced, copied, translated, transmitted, or published in any form or by any means without GIGABYTE's prior written permission.

## **Documentation Classifications**

In order to assist in the use of this product, GIGABYTE provides the following types of documentations:

- For quick set-up of the product, read the Quick Installation Guide included with the product.
- For detailed product information, carefully read the User's Manual.

For product-related information, check on our website at: <https://www.gigabyte.com>

## **Identifying Your Motherboard Revision**

The revision number on your motherboard looks like this: "REV: X.X." For example, "REV: 1.0" means the revision of the motherboard is 1.0. Check your motherboard revision before updating motherboard BIOS, drivers, or when looking for technical information.

Example:

## Box Contents

- TRX40 DESIGNARE motherboard
- Motherboard driver disc
- User's Manual
- Quick Installation Guide
- One AORUS Gen4 AIC Adaptor (GC-4XM2G4)
- One GC-TITAN RIDGE Add-in Card
- One Wi-Fi antenna
- Four SATA cables
- One addressable LED strip adapter cable
- One RGB LED strip extension cable
- Two thermistor cables
- One G Connector
- M.2 screw(s)/M.2 standoff(s)

The box contents above are for reference only and the actual items shall depend on the product package you obtain. The box contents are subject to change without notice.

## Optional Items

- 2-port USB 2.0 bracket (Part No. 12CR1-1UB030-6\*R)
- eSATA bracket (Part No. 12CF1-3SATPW-4\*R)
- 3.5" Front Panel with 2 USB 3.2 Gen 1 ports (Part No. 12CR1-FPX582-2\*R)

# Chapter 1 Hardware Installation

## 1-1 Installation Precautions

The motherboard contains numerous delicate electronic circuits and components which can become damaged as a result of electrostatic discharge (ESD). Prior to installation, carefully read the user's manual and follow these procedures:

- Prior to installation, make sure the chassis is suitable for the motherboard.
- Prior to installation, do not remove or break motherboard S/N (Serial Number) sticker or warranty sticker provided by your dealer. These stickers are required for warranty validation.
- Always remove the AC power by unplugging the power cord from the power outlet before installing or removing the motherboard or other hardware components.
- When connecting hardware components to the internal connectors on the motherboard, make sure they are connected tightly and securely.
- When handling the motherboard, avoid touching any metal leads or connectors.
- It is best to wear an electrostatic discharge (ESD) wrist strap when handling electronic components such as a motherboard, CPU or memory. If you do not have an ESD wrist strap, keep your hands dry and first touch a metal object to eliminate static electricity.
- Prior to installing the motherboard, please have it on top of an antistatic pad or within an electrostatic shielding container.
- Before connecting or unplugging the power supply cable from the motherboard, make sure the power supply has been turned off.
- Before turning on the power, make sure the power supply voltage has been set according to the local voltage standard.
- Before using the product, please verify that all cables and power connectors of your hardware components are connected.
- To prevent damage to the motherboard, do not allow screws to come in contact with the motherboard circuit or its components.
- Make sure there are no leftover screws or metal components placed on the motherboard or within the computer casing.
- Do not place the computer system on an uneven surface.
- Do not place the computer system in a high-temperature or wet environment.
- Turning on the computer power during the installation process can lead to damage to system components as well as physical harm to the user.
- If you are uncertain about any installation steps or have a problem related to the use of the product, please consult a certified computer technician.
- If you use an adapter, extension power cable, or power strip, ensure to consult with its installation and/or grounding instructions.

## 1-2 Product Specifications

 CPU	<ul style="list-style-type: none"> <li>AMD Socket sTRX4:           <ul style="list-style-type: none"> <li>Support 3rd Generation AMD Ryzen™ Threadripper™ processors (Go to GIGABYTE's website for the latest CPU support list.)</li> </ul> </li> </ul>
 Chipset	<ul style="list-style-type: none"> <li>AMD TRX40</li> </ul>
 Memory	<ul style="list-style-type: none"> <li>8 x DDR4 DIMM sockets supporting up to 256 GB (32 GB single DIMM capacity) of system memory           <ul style="list-style-type: none"> <li>Quad channel memory architecture</li> <li>Support for DDR4 3200/2933/2667/2400/2133 MHz memory modules</li> <li>Support for ECC Un-buffered DIMM 1Rx8/2Rx8 memory modules</li> <li>Support for non-ECC Un-buffered DIMM 1Rx8/2Rx8/1Rx16 memory modules</li> <li>Support for Extreme Memory Profile (XMP) memory modules (Go to GIGABYTE's website for the latest supported memory speeds and memory modules.)</li> </ul> </li> </ul>
 Audio	<ul style="list-style-type: none"> <li>Realtek® ALC4080 Audio CODEC           <ul style="list-style-type: none"> <li>Support for DTS:X® Ultra</li> <li>High Definition Audio</li> <li>2/4/5.1/7.1-channel</li> <li>Support for S/PDIF Out</li> </ul> </li> </ul>
 LAN	<ul style="list-style-type: none"> <li>2 x Intel® GbE LAN chips (1 Gbps/100 Mbps)</li> </ul>

	Form Factor	<ul style="list-style-type: none"> <li>◆ XL-ATX Form Factor; 32.5cm x 26.9cm</li> </ul>

\* GIGABYTE reserves the right to make any changes to the product specifications and product-related information without prior notice.

Please visit GIGABYTE's website for support lists of CPU, memory modules, SSDs, and M.2 devices.

Please visit the **Support/Utility List** page on GIGABYTE's website to download the latest version of apps.

## 1-3 Installing the CPU and CPU Cooler

Read the following guidelines before you begin to install the CPU:

- Make sure that the motherboard supports the CPU.  
(Go to GIGABYTE's website for the latest CPU support list.)
- Prepare a T20 star screwdriver.
- Always turn off the computer and unplug the power cord from the power outlet before installing the CPU to prevent hardware damage.
- Apply an even and thin layer of thermal grease on the surface of the CPU.
- Do not turn on the computer if the CPU cooler is not installed, otherwise overheating and damage of the CPU may occur.
- Set the CPU host frequency in accordance with the CPU specifications. It is not recommended that the system bus frequency be set beyond hardware specifications since it does not meet the standard requirements for the peripherals. If you wish to set the frequency beyond the standard specifications, please do so according to your hardware specifications including the CPU, graphics card, memory, hard drive, etc.

### 1-3-1 Installing the CPU

The CPU carrier frame must be slid into the CPU rail frame with the CPU. Do not remove the CPU from the CPU carrier frame.

Follow the steps below to correctly install the CPU into the motherboard CPU socket.

- Before installing the CPU, make sure to turn off the computer and unplug the power cord from the power outlet to prevent damage to the CPU.
- To protect the socket contacts, do not remove the CPU socket cap unless the CPU is inserted into the CPU socket. Save the cap properly and always replace it when the CPU is removed.

**Step 1:**  
On the CPU metal load plate, there are three screws marked as 1, 2, 3. To loosen/tighten these screws, you need a T20 star screwdriver. The OPEN and CLOSE markings indicate in what order to loosen/tighten the screws.

To open the CPU metal load plate, loosen the screws in 3>2>1 sequence.

To close the CPU metal load plate, tighten the screws in 1>2>3 sequence.

**Step 2:**  
To open the CPU metal load plate, start by loosening Screw 3, then Screw 2, and finally Screw 1. After all three screws are loosened, gently lift the load plate to its fully open position.

**Step 3:**  
Use your fingers to pull up the tabs on the two sides of the CPU rail frame to release the CPU rail frame from the CPU socket. Then lift the rail frame.

**Step 4:**  
Use one hand to hold the rail frame and the other to slide the external cap out of the rail frame.

**Step 5:**  
Grasp the top portion of the CPU carrier frame and align the edges of the CPU carrier frame with the rails of the CPU rail frame. Then slide the carrier frame into the rails until it stops sliding in.

Make sure the edges of the CPU carrier frame are installed correctly on the rails.

**Step 6:**  
Push the carrier frame into place and you will hear a "click" sound when it is pushed to the bottom.

**Warning!** The CPU carrier frame cannot be placed outside the rails.

**Step 7:**  
Remove the CPU socket cap.

**Step 8:**  
After installing the CPU, use two fingers to push down on the upper portion of the sides of the CPU carrier frame to fasten the rail frame back to the CPU socket.

**Step 9:**  
Close the metal load plate. With one finger pressing down on the load plate, begin tightening Screw 1 slightly. Then do the same to Screw 2 and Screw 3. Next, fully tighten the three screws. Make sure the motherboard is placed on a stable surface during the tightening process.

### 1-3-2 Installing the CPU Cooler

Refer to the steps below to correctly install the CPU cooler on the motherboard. Use a CPU cooler that is specifically designed to be able to cool an AMD Ryzen™ Threadripper™ processor or install a water cooling system to ensure proper heat dissipation and a stable system operation. (Actual installation process may differ depending the CPU cooler to be used. Refer to the user's manual for your CPU cooler.)

**Step 1:** Apply an even and thin layer of thermal grease on the surface of the installed CPU.

**Step 2:** Place the cooler atop the CPU, aligning the four mounting screws with the mounting holes around the CPU socket. NOTE: the spacing between the upper two screws is not the same as that between the lower two screws, please make sure to align the screws correctly).

**Step 3:** Use one hand to hold the cooler and the other to tighten the screws in a diagonal sequence. Begin tightening a screw with a few turns and repeat with the screw diagonally opposite the one you just tightened. Then do the same to the other pair. Next, fully tighten the four screws.

**Step 4:** Finally, attach the power connector of the CPU cooler to the CPU fan header (CPU\_FAN) on the motherboard.

Use extreme care when removing the CPU cooler because the thermal grease/tape between the CPU cooler and CPU may adhere to the CPU. Inadequately removing the CPU cooler may damage the CPU.

## 1-4 Installing the Memory

Read the following guidelines before you begin to install the memory:

- Make sure that the motherboard supports the memory. It is recommended that memory of the same capacity, brand, speed, and chips be used. (Go to GIGABYTE's website for the latest supported memory speeds and memory modules.)
- Always turn off the computer and unplug the power cord from the power outlet before installing the memory to prevent hardware damage.
- Memory modules have a foolproof design. A memory module can be installed in only one direction. If you are unable to insert the memory, switch the direction.

### 1-4-1 Quad Channel Memory Configuration

This motherboard supports Quad Channel Technology. After the memory is installed, the BIOS will automatically detect the specifications and capacity of the memory. The eight DDR4 memory sockets are divided into four channels as following:

- ▶▶ Channel A: DDR4\_A1, DDR4\_A2
- ▶▶ Channel B: DDR4\_B1, DDR4\_B2
- ▶▶ Channel C: DDR4\_C1, DDR4\_C2
- ▶▶ Channel D: DDR4\_D1, DDR4\_D2

▶▶ Refer to the table below for memory installation according to the number of the memory modules you want to install:

	DDR4_D2	DDR4_D1	DDR4_C2	DDR4_C1	DDR4_A1	DDR4_A2	DDR4_B1	DDR4_B2
1 Modules								✓
2 Modules						✓		✓
4 Modules	✓		✓			✓		✓
6 Modules	✓	✓	✓			✓	✓	✓
8 Modules	✓	✓	✓	✓	✓	✓	✓	✓

✓ : Installed, Empty: Not Installed

For optimum performance, it is recommended that memory of the same capacity, brand, speed, and chips be used. When installing the memory, make sure to begin with the second socket of each channel, such as DDR4\_A2, DDR4\_B2, DDR4\_C2, DDR4\_D2.

## 1-4-2 Installing a Memory

 Before installing a memory module, make sure to turn off the computer and unplug the power cord from the power outlet to prevent damage to the memory module. DDR4 and DDR3 DIMMs are not compatible to each other or DDR2 DIMMs. Be sure to install DDR4 DIMMs on this motherboard.

A DDR4 memory module has a notch, so it can only fit in one direction. Follow the steps below to correctly install your memory modules in the memory sockets.

### Step 1:

Note the orientation of the memory module. Spread the retaining clip at the right end of the memory socket. Place the memory module on the socket. As indicated in the picture on the left, place your fingers on the top edge of the memory, push down on the memory and insert it vertically into the memory socket.

### Step 2:

The clip at the right end of the socket will snap into place when the memory module is securely inserted.

## 1-5 Installing an Expansion Card

Read the following guidelines before you begin to install an expansion card:

- Make sure the motherboard supports the expansion card. Carefully read the manual that came with your expansion card.
- Always turn off the computer and unplug the power cord from the power outlet before installing an expansion card to prevent hardware damage.

Follow the steps below to correctly install your expansion card in the expansion slot.

1. Locate an expansion slot that supports your card. Remove the metal slot cover from the chassis back panel.
2. Align the card with the slot, and press down on the card until it is fully seated in the slot.
3. Make sure the metal contacts on the card are completely inserted into the slot.
4. Secure the card's metal bracket to the chassis back panel with a screw.
5. After installing all expansion cards, replace the chassis cover(s).
6. Turn on your computer. If necessary, go to BIOS Setup to make any required BIOS changes for your expansion card(s).
7. Install the driver provided with the expansion card in your operating system.

Example: Installing and Removing a PCI Express Graphics Card:

- Installing a Graphics Card:  
Gently push down on the top edge of the card until it is fully inserted into the PCI Express slot. Make sure the card is securely seated in the slot and does not rock.

- Removing the Card:  
Gently push back on the lever on the slot and then lift the card straight out from the slot.

## 1-6 Setting up AMD CrossFire™/NVIDIA® SLI™ Configuration

### A. System Requirements

- Windows 10 64-bit operating system
- A CrossFire/SLI-supported motherboard with two or more PCI Express x16 slots and correct driver
- CrossFire/SLI-ready graphics cards of identical brand and chip and correct driver  
(For the latest GPUs that support the 4-Way/3-way CrossFire/SLI technology, please refer to the AMD/NVIDIA® website.)<sup>(Note 1)</sup>
- CrossFire<sup>(Note 2)</sup>/SLI bridge connectors
- A power supply with sufficient power is recommended<sup>(Note 3)</sup> (Refer to the manual of your graphics cards for the power requirement)

### B. Connecting the Graphics Cards

Step 1:

Observe the steps in "1-5 Installing an Expansion Card" and install CrossFire/SLI graphics cards on the PCI Express x16 slots.

Step 2:

Insert the CrossFire<sup>(Note 2)</sup>/SLI bridge connectors in the CrossFire/SLI gold edge connectors on top of the cards.

Step 3:

Plug the display cable into the graphics card on the PCIEX16\_1 slot.

### C. Configuring the Graphics Card Driver

#### C-1. To Enable CrossFire Function

After installing the graphics card driver in the operating system, go to the **AMD RADEON SETTINGS** screen. Browse to **Gaming/Global Settings** and ensure **AMD CrossFire** is set to **On**.

#### C-2. To Enable SLI Function

After installing the graphics card driver in the operating system, go to the **NVIDIA Control Panel**. Browse to the **Configure SLI, Surround, PhysX** screen and ensure **Maximize 3D performance** is enabled.

(Note 1) When using dual core graphics cards, only 2-way is supported.

(Note 2) The bridge connector(s) may be needed or not depending on your graphics cards.

(Note 3) When two or more graphics cards are installed, we recommend that you connect the power cable from the power supply to the OC\_PEG connector to ensure system stability.

Procedure and driver screen for enabling CrossFire/SLI technology may differ by graphics cards and driver version. Refer to the manual that came with your graphics cards for more information about enabling CrossFire/SLI technology.

## 1-7 Back Panel Connectors

### a Q-Flash Plus Button <sup>(Note)</sup>

This button allows you to update the BIOS when the power connector is connected but the system is not powered on.

### b Clear CMOS Button

Use this button to clear the CMOS values (e.g. BIOS configuration) and reset the CMOS values to factory defaults when needed.

- Always turn off your computer and unplug the power cord from the power outlet before using the clear CMOS button.
- Do not use the clear CMOS button when the system is on, or the system may shutdown and data loss or damage may occur.
- After system restart, go to BIOS Setup to load factory defaults (select Load Optimized Defaults) or manually configure the BIOS settings (refer to Chapter 2, "BIOS Setup," for BIOS configurations).

### c USB 2.0/1.1 Port

The USB port supports the USB 2.0/1.1 specification. Use this port for USB devices.

### d USB 3.2 Gen 2 Type-A Port (Red)

The USB 3.2 Gen 2 Type-A port supports the USB 3.2 Gen 2 specification and is compatible to the USB 3.2 Gen 1 and USB 2.0 specification. Use this port for USB devices.

### e USB 3.2 Gen 2 Type-A Port (Q-Flash Plus Port)

The USB 3.2 Gen 2 Type-A port supports the USB 3.2 Gen 2 specification and is compatible to the USB 3.2 Gen 1 and USB 2.0 specification. Before using Q-Flash Plus <sup>(Note)</sup>, make sure to insert the USB flash drive into this port first.

### f RJ-45 LAN Port

The Gigabit Ethernet LAN port provides Internet connection at up to 1 Gbps data rate. The following describes the states of the LAN port LEDs.

Speed LED:

State	Description
Orange	1 Gbps data rate
Green	100 Mbps data rate
Off	10 Mbps data rate

Activity LED:

State	Description
Blinking	Data transmission or receiving is occurring
On	No data transmission or receiving is occurring

### g USB Type-C® Port

The reversible USB port supports the USB 3.2 Gen 2 specification and is compatible to the USB 3.2 Gen 1 and USB 2.0 specification. Use this port for USB devices.

(Note) To enable Q-Flash Plus function, refer to Chapter 5, "Unique Features," for more information.

### ⑩ SMA Antenna Connectors (2T2R)

Use this connector to connect an antenna.

Tighten the antenna cables to the antenna connectors and then move the antenna to a place where the signal is good.

### ⑩ Center/Subwoofer Speaker Out

Use this audio jack to connect center/subwoofer speakers.

### ⑩ Rear Speaker Out

Use this audio jack to connect rear speakers.

### ⑩ Optical S/PDIF Out Connector

This connector provides digital audio out to an external audio system that supports digital optical audio. Before using this feature, ensure that your audio system provides an optical digital audio in connector.

### ⑩ Line In/Side Speaker Out

The line in jack. Use this audio jack for line in devices such as an optical drive, walkman, etc.

### ⑩ Line Out/Front Speaker Out

The line out jack. This jack supports audio amplifying function. For better sound quality, it is recommended that you connect your headphone/speaker to this jack (actual effects may vary by the device being used).

### ⑩ Mic In

The Mic in jack.

Audio Jack Configurations:

Jack	Headphone/ 2-channel	4-channel	5.1-channel	7.1-channel
⑩ Center/Subwoofer Speaker Out			✓	✓
⑩ Rear Speaker Out		✓	✓	✓
⑩ Line In/Side Speaker Out				✓
⑩ Line Out/Front Speaker Out	✓	✓	✓	✓
⑩ Mic In				✓

- If you want to install a Side Speaker, you need to retask the Line in jack to be Side Speaker out through the audio driver.
- To enable or configure the audio amplifying function for the Line out jack, please access the Realtek Audio Console application.

- When removing the cable connected to a back panel connector, first remove the cable from your device and then remove it from the motherboard.
- When removing the cable, pull it straight out from the connector. Do not rock it side to side to prevent an electrical short inside the cable connector.

## 1-8 Onboard LEDs and Buttons

### Status LEDs

The status LEDs show whether the CPU, graphics card, memory, and operating system are working properly after system power-on. If the CPU/VGA/DRAM LED is on, that means the corresponding device is not working normally; if the BOOT LED is on, that means you haven't entered the operating system yet.

**VGA:** Graphics card status LED

**DRAM:** Memory status LED

**CPU:** CPU status LED

**BOOT:** Operating system status LED

### Quick Button

This motherboard has 2 quick buttons: power button and reset button. The power button and reset button allow users to quickly turn on/off or reset the computer in an open-case environment when they want to change hardware components or conduct hardware testing.

**PW\_SW:** Power Button

**RST\_SW:** Reset Button

## 1-9 Internal Connectors

1) ATX_12V1/ATX_12V2	12) M2M/M2Q/M2P/M2C
2) ATX	13) F_PANEL
3) OC_PEG	14) F_AUDIO
4) CPU_FAN	15) F_U32C
5) SYS_FAN1/2	16) F_USB32_1/F_USB32_2
6) SYS_FAN5A/B_PUMP/SYS_FAN6A/B_PUMP	17) F_USB20_1/F_USB20_2
7) CPU_OPT	18) THB_C
8) EC_TEMP1/EC_TEMP2	19) TPM
9) D_LED1/D_LED2	20) BAT
10) LED_C1/LED_C2	21) CLR_CMOS
11) SATA3 0/1/2/3/4/5/6/7	

Read the following guidelines before connecting external devices:

- First make sure your devices are compliant with the connectors you wish to connect.
- Before installing the devices, be sure to turn off the devices and your computer. Unplug the power cord from the power outlet to prevent damage to the devices.
- After installing the device and before turning on the computer, make sure the device cable has been securely attached to the connector on the motherboard.

## 1/2) ATX\_12V1/ATX\_12V2/ATX (2x4 12V Power Connectors and 2x12 Main Power Connector)

With the use of the power connector, the power supply can supply enough stable power to all the components on the motherboard. Before connecting the power connector, first make sure the power supply is turned off and all devices are properly installed. The power connector possesses a foolproof design. Connect the power supply cable to the power connector in the correct orientation.

The 12V power connector mainly supplies power to the CPU. If the 12V power connector is not connected, the computer will not start.

To meet expansion requirements, it is recommended that a power supply that can withstand high power consumption be used (500W or greater). If a power supply is used that does not provide the required power, the result can lead to an unstable or unbootable system.

ATX\_12V1/ATX\_12V2:

Pin No.	Definition
1	GND (Only for 2x4-pin 12V)
2	GND (Only for 2x4-pin 12V)
3	GND
4	GND
5	+12V (Only for 2x4-pin 12V)
6	+12V (Only for 2x4-pin 12V)
7	+12V
8	+12V

ATX:

Pin No.	Definition	Pin No.	Definition
1	3.3V	13	3.3V
2	3.3V	14	-12V
3	GND	15	GND
4	+5V	16	PS_ON (soft On/Off)
5	GND	17	GND
6	+5V	18	GND
7	GND	19	GND
8	Power Good	20	NC
9	5VSB (stand by +5V)	21	+5V
10	+12V	22	+5V
11	+12V (Only for 2x12-pin ATX)	23	+5V (Only for 2x12-pin ATX)
12	3.3V (Only for 2x12-pin ATX)	24	GND (Only for 2x12-pin ATX)

### 3) OC\_PEG (PCIe Power Connector)

The power connector provide auxiliary power to the onboard PCI Express x16 slots. When two or more graphics cards are installed, we recommend that you connect the power cable from the power supply to the ATX4P connector to ensure system stability.

Pin No.	Definition
1	+12V
2	+12V
3	+12V
4	GND
5	GND
6	GND

### 4/5) CPU\_FAN/SYS\_FAN1/SYS\_FAN2 (Fan Headers)

All fan headers on this motherboard are 4-pin. Most fan headers possess a foolproof insertion design. When connecting a fan cable, be sure to connect it in the correct orientation (the black connector wire is the ground wire). The speed control function requires the use of a fan with fan speed control design. For optimum heat dissipation, it is recommended that a system fan be installed inside the chassis.

CPU\_FAN

SYS\_FAN1

SYS\_FAN2

Pin No.	Definition
1	GND
2	Voltage Speed Control
3	Sense
4	PWM Speed Control

- Be sure to connect fan cables to the fan headers to prevent your CPU and system from overheating. Overheating may result in damage to the CPU or the system may hang.
- These fan headers are not configuration jumper blocks. Do not place a jumper cap on the headers.

## 6) SYS\_FAN5A/B\_PUMP/SYS\_FAN6A/B\_PUMP (System Fan/Water Cooling Pump Headers)

The fan/pump headers are 4-pin. Most fan headers possess a foolproof insertion design. When connecting a fan cable, be sure to connect it in the correct orientation (the black connector wire is the ground wire). The speed control function requires the use of a fan with fan speed control design. For optimum heat dissipation, it is recommended that a system fan be installed inside the chassis. The header also provides speed control for a water cooling pump, refer to Chapter 2, "BIOS Setup," "Settings\Smart Fan 5," for more information.

## 7) CPU\_OPT (Water Cooling CPU Fan Header)

The fan header is 4-pin and possesses a foolproof insertion design. Most fan headers possess a foolproof insertion design. When connecting a fan cable, be sure to connect it in the correct orientation (the black connector wire is the ground wire). The speed control function requires the use of a fan with fan speed control design.

- Be sure to connect fan cables to the fan headers to prevent your CPU and system from overheating. Overheating may result in damage to the CPU or the system may hang.
- These fan headers are not configuration jumper blocks. Do not place a jumper cap on the headers.

## 8) EC\_TEMP1/EC\_TEMP2 (Temperature Sensor Headers)

Connect the thermistor cables to the headers for temperature detection.

## 9) D\_LED1/D\_LED2 (Addressable LED Strip Headers)

The headers can be used to connect a standard 5050 addressable LED strip, with maximum power rating of 5A (5V) and maximum number of 1000 LEDs.

Connect one end of the included addressable LED strip adapter cable to this header and the other end to your addressable LED strip. The power pin (marked with a triangle on the plug) of the LED strip must be connected to Pin 1 of the addressable LED strip header. Incorrect connection may lead to the damage of the LED strip.

For how to turn on/off the lights of the LED strip, refer to the instructions on in Chapter 5, "Unique Features," "APP Center\RGB Fusion."

Before installing the devices, be sure to turn off the devices and your computer. Unplug the power cord from the power outlet to prevent damage to the devices.

## 10) LED\_C1/LED\_C2 (RGB LED Strip Headers)

The headers can be used to connect a standard 5050 RGB LED strip (12V/G/R/B), with maximum power rating of 2A (12V) and maximum length of 2m.

Pin No.	Definition
1	12V
2	G
3	R
4	B

Connect one end of the RGB LED strip extension cable to the header and the other end to your RGB LED strip. The black wire (marked with a triangle on the plug) of the extension cable must be connected to Pin 1 (12V) of this header. The 12V pin (marked with an arrow) on the other end of the extension cable must be lined up with the 12V of the LED strip. Be careful with the connection orientation of the LED strip; incorrect connection may lead to the damage of the LED strip.

## 11) SATA3 0/1/2/3/4/5/6/7 (SATA 6Gb/s Connectors)

The SATA connectors conform to SATA 6Gb/s standard and are compatible with SATA 3Gb/s and SATA 1.5Gb/s standard. Each SATA connector supports a single SATA device. The AMD Chipset supports RAID 0, RAID 1, and RAID 10. Refer to Chapter 3, "Configuring a RAID Set," for instructions on configuring a RAID array.

Pin No.	Definition
1	GND
2	TXP
3	TXN
4	GND
5	RXN
6	RXP
7	GND

To enable hot-plugging for the SATA ports, refer to Chapter 2, "BIOS Setup," "Settings\IO Ports\ SATA And RST Configuration," for more information.

## 12) M2M/M2Q/M2P/M2C (M.2 Socket 3 Connectors)

The M.2 connectors support M.2 SATA SSDs or M.2 PCIe SSDs and support RAID configuration. Please note that an M.2 PCIe SSD cannot be used to create a RAID set either with an M.2 SATA SSD or a SATA hard drive. Refer to Chapter 3, "Configuring a RAID Set," for instructions on configuring a RAID array.

Follow the steps below to correctly install an M.2 SSD in the M.2 connector.

**Step 1:**  
Get a screw and a standoff from the included M.2 screw kit. Locate the M.2 connector where you will install the M.2 SSD, use a screwdriver to unfasten the screw on the heatsink and then remove the heatsink.

**Step 2:**  
Locate the proper mounting hole for the M.2 SSD to be installed and then tighten the standoff first. Insert the M.2 SSD into the M.2 connector at an angle.

**Step 3:**  
Press the M.2 SSD down and then secure it with the screw. Replace the heatsink and secure it to the original hole.

**Step 4:**  
The installation is completed, as shown in the picture above.

Select the proper hole for the M.2 SSD to be installed and refasten the screw and standoff.

### 13) F\_PANEL (Front Panel Header)

Connect the power switch, reset switch, speaker, chassis intrusion switch/sensor and system status indicator on the chassis to this header according to the pin assignments below. Note the positive and negative pins before connecting the cables.

- **PLED/PWR\_LED (Power LED):**

System Status	LED
S0	On
S3/S4/S5	Off

Connects to the power status indicator on the chassis front panel. The LED is on when the system is operating. The LED is off when the system is in S3/S4 sleep state or powered off (S5).

- **PW (Power Switch):**

Connects to the power switch on the chassis front panel. You may configure the way to turn off your system using the power switch (refer to Chapter 2, "BIOS Setup," "Settings/Platform Power," for more information).

- **SPEAK (Speaker):**

Connects to the speaker on the chassis front panel. The system reports system startup status by issuing a beep code. One single short beep will be heard if no problem is detected at system startup.

- **HD (Hard Drive Activity LED):**

Connects to the hard drive activity LED on the chassis front panel. The LED is on when the hard drive is reading or writing data.

- **RES (Reset Switch):**

Connects to the reset switch on the chassis front panel. Press the reset switch to restart the computer if the computer freezes and fails to perform a normal restart.

- **CI (Chassis Intrusion Header):**

Connects to the chassis intrusion switch/sensor on the chassis that can detect if the chassis cover has been removed. This function requires a chassis with a chassis intrusion switch/sensor.

- **NC: No connection.**

The front panel design may differ by chassis. A front panel module mainly consists of power switch, reset switch, power LED, hard drive activity LED, speaker and etc. When connecting your chassis front panel module to this header, make sure the wire assignments and the pin assignments are matched correctly.

#### 14) F\_AUDIO (Front Panel Audio Header)

The front panel audio header supports High Definition audio (HD). You may connect your chassis front panel audio module to this header. Make sure the wire assignments of the module connector match the pin assignments of the motherboard header. Incorrect connection between the module connector and the motherboard header will make the device unable to work or even damage it.

Pin No.	Definition
1	MIC2_L
2	GND
3	MIC2_R
4	NC
5	LINE2_R
6	Sense
7	GND
8	No Pin
9	LINE2_L
10	Sense

Some chassis provide a front panel audio module that has separated connectors on each wire instead of a single plug. For information about connecting the front panel audio module that has different wire assignments, please contact the chassis manufacturer.

#### 15) F\_U32C (USB Type-C® Header with USB 3.2 Gen 2 Support)

The header conforms to USB 3.2 Gen 2 specification and can provide one USB port.

Pin No.	Definition	Pin No.	Definition
1	VBUS	11	VBUS
2	TX1+	12	TX2+
3	TX1-	13	TX2-
4	GND	14	GND
5	RX1+	15	RX2+
6	RX1-	16	RX2-
7	VBUS	17	GND
8	CC1	18	D-
9	SBU1	19	D+
10	SBU2	20	CC2

Prior to installing the USB bracket, be sure to turn off your computer and unplug the power cord from the power outlet to prevent damage to the USB bracket.

## 16) F\_USB32\_1/F\_USB32\_2 (USB 3.2 Gen 1 Headers)

The headers conform to USB 3.2 Gen 1 and USB 2.0 specification and each header can provide two USB ports. For purchasing the optional 3.5" front panel that provides two USB 3.2 Gen 1 ports, please contact the local dealer.

Pin No.	Definition	Pin No.	Definition
1	VBUS	11	D2+
2	SSRX1-	12	D2-
3	SSRX1+	13	GND
4	GND	14	SSTX2+
5	SSTX1-	15	SSTX2-
6	SSTX1+	16	GND
7	GND	17	SSRX2+
8	D1-	18	SSRX2-
9	D1+	19	VBUS
10	NC	20	No Pin

 Only the USB ports routed to the F\_USB32\_1 connector support USB TurboCharger. Enabling this function requires software support. The maximum power output of this connector may vary depending on the power management mechanism for the USB cable and charging device used. For more information on USB TurboCharger, refer to the instructions in Chapter 5, "Unique Features."

## 17) F\_USB20\_1/F\_USB20\_2 (USB 2.0/1.1 Headers)

The headers conform to USB 2.0/1.1 specification. Each USB header can provide two USB ports via an optional USB bracket. For purchasing the optional USB bracket, please contact the local dealer.

Pin No.	Definition
1	Power (5V)
2	Power (5V)
3	USB DX-
4	USB DY-
5	USB DX+
6	USB DY+
7	GND
8	GND
9	No Pin
10	NC

 • Do not plug the IEEE 1394 bracket (2x5-pin) cable into the USB 2.0/1.1 header.  
 • Prior to installing the USB bracket, be sure to turn off your computer and unplug the power cord from the power outlet to prevent damage to the USB bracket.

### 18) THB\_C (GIGABYTE GC-TITAN RIDGE Add-in Card Connector)

This connector is for a GIGABYTE GC-TITAN RIDGE add-in card which two USB 3.2 Gen 2 Type-C® ports are able to daisy-chain as a total up to 6 devices and 5V/3A quick power charge support.

### 19) TPM (Trusted Platform Module Header)

You may connect a TPM (Trusted Platform Module) to this header.

Pin No.	Definition
1	LAD0
2	VCC3
3	LAD1
4	No Pin
5	LAD2
6	LCLK
7	LAD3
8	GND
9	LFRAME
10	NC
11	SERIRQ
12	LRESET

## 20) BAT (Battery)

The battery provides power to keep the values (such as BIOS configurations, date, and time information) in the CMOS when the computer is turned off. Replace the battery when the battery voltage drops to a low level, or the CMOS values may not be accurate or may be lost.

You may clear the CMOS values by removing the battery:

1. Turn off your computer and unplug the power cord.
2. Gently remove the battery from the battery holder and wait for one minute. (Or use a metal object like a screwdriver to touch the positive and negative terminals of the battery holder, making them short for 5 seconds.)
3. Replace the battery.
4. Plug in the power cord and restart your computer.

- Always turn off your computer and unplug the power cord before replacing the battery.
- Replace the battery with an equivalent one. Damage to your devices may occur if the battery is replaced with an incorrect model.
- Contact the place of purchase or local dealer if you are not able to replace the battery by yourself or uncertain about the battery model.
- When installing the battery, note the orientation of the positive side (+) and the negative side (-) of the battery (the positive side should face up).
- Used batteries must be handled in accordance with local environmental regulations.

## 21) CLR\_CMOS (Clear CMOS Jumper)

Use this jumper to clear the BIOS configuration and reset the CMOS values to factory defaults. To clear the CMOS values, use a metal object like a screwdriver to touch the two pins for a few seconds.

Open: Normal

Short: Clear CMOS Values

- Always turn off your computer and unplug the power cord from the power outlet before clearing the CMOS values.
- After system restart, go to BIOS Setup to load factory defaults (select Load Optimized Defaults) or manually configure the BIOS settings (refer to Chapter 2, "BIOS Setup," for BIOS configurations).

## Chapter 2 BIOS Setup

BIOS (Basic Input and Output System) records hardware parameters of the system in the CMOS on the motherboard. Its major functions include conducting the Power-On Self-Test (POST) during system startup, saving system parameters and loading operating system, etc. BIOS includes a BIOS Setup program that allows the user to modify basic system configuration settings or to activate certain system features.

When the power is turned off, the battery on the motherboard supplies the necessary power to the CMOS to keep the configuration values in the CMOS.

To access the BIOS Setup program, press the <Delete> key during the POST when the power is turned on.

To upgrade the BIOS, use either the GIGABYTE Q-Flash or @BIOS utility.

- Q-Flash allows the user to quickly and easily upgrade or back up BIOS without entering the operating system.
- @BIOS is a Windows-based utility that searches and downloads the latest version of BIOS from the Internet and updates the BIOS.

For instructions on using the Q-Flash and @BIOS utilities, refer to Chapter 5, "BIOS Update Utilities."

- Because BIOS flashing is potentially risky, if you do not encounter problems using the current version of BIOS, it is recommended that you not flash the BIOS. To flash the BIOS, do it with caution. Inadequate BIOS flashing may result in system malfunction.
- It is recommended that you not alter the default settings (unless you need to) to prevent system instability or other unexpected results. Inadequately altering the settings may result in system's failure to boot. If this occurs, try to clear the CMOS values and reset the board to default values. (Refer to the "Load Optimized Defaults" section in this chapter or introductions of the battery or the clear CMOS jumper/button in Chapter 1 for how to clear the CMOS values.)

## 2-1 Startup Screen

The following startup Logo screen will appear when the computer boots.

### Function Keys:

#### <DEL>: BIOS SETUP/Q-FLASH

Press the <Delete> key to enter BIOS Setup or to access the Q-Flash utility in BIOS Setup.

#### <F12>: BOOT MENU

Boot Menu allows you to set the first boot device without entering BIOS Setup. In Boot Menu, use the up arrow key <↑> or the down arrow key <↓> to select the first boot device, then press <Enter> to accept. The system will boot from the device immediately.

Note: The setting in Boot Menu is effective for one time only. After system restart, the device boot order will still be based on BIOS Setup settings.

#### <END>: Q-FLASH

Press the <End> key to access the Q-Flash utility directly without having to enter BIOS Setup first.

## 2-2 The Main Menu

### Advanced Mode

The Advanced Mode provides detailed BIOS settings. You can press the arrow keys on your keyboard to move among the items and press <Enter> to accept or enter a sub-menu. Or you can use your mouse to select the item you want.

(Sample BIOS Version: E3)

### Advanced Mode Function Keys

<←><→>	Move the selection bar to select a setup menu
<↑><↓>	Move the selection bar to select an configuration item on a menu
<Enter>/Double Click	Execute command or enter a menu
<+>/<Page Up>	Increase the numeric value or make changes
<->/<Page Down>	Decrease the numeric value or make changes
<F1>	Show descriptions of the function keys
<F2>	Switch to Easy Mode
<F3>	Save the current BIOS settings to a profile
<F4>	Load the BIOS settings from a profile created before
<F5>	Restore the previous BIOS settings for the current submenus
<F6>	Display the Smart Fan 5 screen
<F7>	Load the Optimized BIOS default settings for the current submenus
<F8>	Access the Q-Flash utility
<F10>	Save all the changes and exit the BIOS Setup program
<F11>	Switch to the Favorites submenu
<F12>	Capture the current screen as an image and save it to your USB drive
<Insert>	Add or remove a favorite option
<Ctrl>+<S>	Display information on the installed memory
<Esc>	Main Menu: Exit the BIOS Setup program Submenus: Exit current submenu

## B. Easy Mode

Easy Mode allows users to quickly view their current system information or to make adjustments for optimum performance. In Easy Mode, you can use your mouse to move through configuration items or press <F2> to switch to the Advanced Mode screen.

## 2-3 Favorites (F11)

Set your frequently used options as your favorites and use the <F11> key to quickly switch to the page where all of your favorite options are located. To add or remove a favorite option, go to its original page and press <Insert> on the option. The option is marked with a star sign if set as a "favorite."

## 2-4 Tweaker

Whether the system will work stably with the overclock/overvoltage settings you made is dependent on your overall system configurations. Incorrectly doing overclock/overvoltage may result in damage to CPU, chipset, or memory and reduce the useful life of these components. This page is for advanced users only and we recommend you not to alter the default settings to prevent system instability or other unexpected results. (Inadequately altering the settings may result in system's failure to boot. If this occurs, clear the CMOS values and reset the board to default values.)

### 🔗 CPU Clock Control

Allows you to manually set the CPU base clock in 1 MHz increments. (Default: Auto)

**Important:** It is highly recommended that the CPU frequency be set in accordance with the CPU specifications.

### 🔗 Spread Spectrum Control

Enables or disables CPU/PCIe Spread Spectrum. (Default: Auto)

### 🔗 CPU Clock Ratio

Allows you to alter the clock ratio for the installed CPU. The adjustable range is dependent on the CPU being installed.

### ■ Advanced CPU Core Settings

- ☞ **Core Performance Boost**  
 Allows you to determine whether to enable the Core Performance Boost (CPB) technology, a CPU performance-boost technology. (Default: Auto)
- ☞ **SVM Mode**  
 Virtualization enhanced by Virtualization Technology will allow a platform to run multiple operating systems and applications in independent partitions. With virtualization, one computer system can function as multiple virtual systems. (Default: Disabled)
- ☞ **Global C-state Control**  
 Allows you to determine whether to let the CPU enter C states. When enabled, the CPU core frequency will be reduced during system halt state to decrease power consumption. (Default: Auto)
- ☞ **Power Supply Idle Control**  
 Enables or disables Package C6 State.

  - ▶▶ Typical Current Idle Disables this function.
  - ▶▶ Low Current Idle Enables this function.
  - ▶▶ Auto Lets the BIOS automatically configure this setting. (Default)
- ☞ **CCD Control**  
 Sets the number of CCDs to be used. (Default: Auto)
- ☞ **Downcore Control**  
 Allows you to select the number of CPU cores to enable (the number of CPU cores may vary by CPU). (Default: Auto)
- ☞ **SMT Mode**  
 Allows you to enable or disable the CPU Simultaneous Multi-Threading technology. (Default: Auto)
- ☞ **Extreme Memory Profile (X.M.P.)** <sup>(Note)</sup>  
 Allows the BIOS to read the SPD data on XMP memory module(s) to enhance memory performance when enabled.

  - ▶▶ Disabled Disables this function. (Default)
  - ▶▶ Profile1 Uses Profile 1 settings.
  - ▶▶ Profile2 <sup>(Note)</sup> Uses Profile 2 settings.
- ☞ **XMP High Frequency Support** <sup>(Note)</sup>  
 Allows you to select the compatibility level for high-frequency memory. This item is configurable only when **Extreme Memory Profile (X.M.P.)** is set to **Profile1** or **Profile2**. (Default: Auto)
- ☞ **System Memory Multiplier**  
 Allows you to set the system memory multiplier. **Auto** sets memory multiplier according to memory SPD data. (Default: Auto)

(Note) This item is present only when you install a CPU and a memory module that support this feature.

- **Advanced Memory Settings**

- **Memory Subtimings**

- ▼ **Standard Timing Control, Advanced Timing Control, CAD Bus Setup Timing, CAD Bus Drive Strength, Data Bus Configuration**

These sections provide memory timing settings. Note: Your system may become unstable or fail to boot after you make changes on the memory timings. If this occurs, please reset the board to default values by loading optimized defaults or clearing the CMOS values.

- **SPD Info**

Displays information on the installed memory.

- **CPU Vcore/Dynamic Vcore(DVID)/VCORE SOC/Dynamic VCORE SOC(DVID)/CPU VDD18/PCH\_CLDO/PM\_1VSOC/PM\_1V8/DRAM Voltage (CH A/B)/DDRVP Voltage (CH A/B)/DRAM Termination (CH A/B)/DRAM Voltage (CH C/D)/DDRVP Voltage (CH C/D)/DRAM Termination (CH C/D)**

These items allow you to adjust the CPU Vcore and memory voltages.

■ CPU/VRM Settings

This submenu allows you to configure Load-Line Calibration level, over-voltage protection level, over-current protection level, and PWM phases.

## 2-5 Settings

### ■ Platform Power

#### ○ AC BACK

Determines the state of the system after the return of power from an AC power loss.

- ▶▶ Memory The system returns to its last known awake state upon the return of the AC power.
- ▶▶ Always On The system is turned on upon the return of the AC power.
- ▶▶ Always Off The system stays off upon the return of the AC power. (Default)

#### ○ ErP

Determines whether to let the system consume least power in S5 (shutdown) state. (Default: Disabled)

Note: When this item is set to **Enabled**, the following functions will become unavailable: Resume by Alarm, power on by mouse, and power on by keyboard.

#### ○ Soft-Off by PWR-BTTN

Configures the way to turn off the computer in MS-DOS mode using the power button.

- ▶▶ Instant-Off Press the power button and then the system will be turned off instantly. (Default)
- ▶▶ Delay 4 Sec. Press and hold the power button for 4 seconds to turn off the system. If the power button is pressed for less than 4 seconds, the system will enter suspend mode.

## Power Loading

Enables or disables dummy load. When the power supply is at low load, a self-protection will activate causing it to shutdown or fail. If this occurs, please set to **Enabled**. **Auto** lets the BIOS automatically configure this setting. (Default: Auto)

## Resume by Alarm

Determines whether to power on the system at a desired time. (Default: Disabled)

If enabled, set the date and time as following:

▶▶ Wake up day: Turn on the system at a specific time on each day or on a specific day in a month.

▶▶ Wake up hour/minute/second: Set the time at which the system will be powered on automatically.

Note: When using this function, avoid inadequate shutdown from the operating system or removal of the AC power, or the settings may not be effective.

## Wake on LAN

Enables or disables the wake on LAN function. (Default: Enabled)

## IO Ports

## Initial Display Output

Specifies the first initiation of the monitor display from the onboard graphics or the installed PCI Express graphics card.

▶▶ PCIe 1 Slot Sets the graphics card on the PCIEX16\_1 slot as the first display. (Default)

▶▶ PCIe 2 Slot Sets the graphics card on the PCIEX8\_1 slot as the first display.

▶▶ PCIe 3 Slot Sets the graphics card on the PCIEX16\_2 slot as the first display.

▶▶ PCIe 4 Slot Sets the graphics card on the PCIEX8\_2 slot as the first display.

## PCIEX16\_1 Bifurcation

Allows you to determine how the bandwidth of the PCIEX16\_1 slot is divided. Options: Auto, x16, x4x4x4x4. (Default: Auto)

## PCIEX8\_1 Bifurcation

Allows you to determine how the bandwidth of the PCIEX8\_1 slot is divided. Options: Auto, x8, x4x4. (Default: Auto)

## PCIEX16\_2 Bifurcation

Allows you to determine how the bandwidth of the PCIEX16\_2 slot is divided. Options: Auto, x16, x4x4x4x4. (Default: Auto)

### ⊞ **PCIEX8\_2 Bifurcation**

Allows you to determine how the bandwidth of the PCIEX8\_2 slot is divided. Options: Auto, x8, x4x4. (Default: Auto)

### ⊞ **Above 4G Decoding**

Enables or disables 64-bit capable devices to be decoded in above 4 GB address space (only if your system supports 64-bit PCI decoding). Set to **Enabled** if more than one advanced graphics card are installed and their drivers are not able to be launched when entering the operating system (because of the limited 4 GB memory address space). (Default: Disabled)

### ⊞ **OnBoard LAN1 Controller (LAN1)**

Enables or disables the onboard LAN function. (Default: Enabled)

If you wish to install a 3rd party add-in network card instead of using the onboard LAN, set this item to **Disabled**.

### ⊞ **OnBoard LAN2 Controller (LAN2)**

Enables or disables the onboard LAN function. (Default: Enabled)

If you wish to install a 3rd party add-in network card instead of using the onboard LAN, set this item to **Disabled**.

## ■ **USB Configuration**

### ⊞ **Legacy USB Support**

Allows USB keyboard/mouse to be used in MS-DOS. (Default: Enabled)

### ⊞ **XHCI Hand-off**

Determines whether to enable XHCI Hand-off feature for an operating system without XHCI Hand-off support. (Default: Enabled)

### ⊞ **USB Mass Storage Driver Support**

Enables or disables support for USB storage devices. (Default: Enabled)

### ⊞ **Port 60/64 Emulation**

Enables or disables emulation of I/O ports 64h and 60h. This should be enabled for full legacy support for USB keyboards/mice in MS-DOS or in operating system that does not natively support USB devices. (Default: Disabled)

### ⊞ **Mass Storage Devices**

Displays a list of connected USB mass storage devices. This item appears only when a USB storage device is installed.

## ■ **SATA Configuration**

### ⊞ **SATA Mode**

Enables or disables RAID for the SATA controllers integrated in the Chipset or configures the SATA controllers to AHCI mode.

▶▶ RAID Enables RAID for the SATA controller.

▶▶ AHCI Configures the SATA controllers to AHCI mode. Advanced Host Controller Interface (AHCI) is an interface specification that allows the storage driver to enable advanced Serial ATA features such as Native Command Queuing and hot plug. (Default)

### ⊞ **NVMe RAID mode**

Allows you to determine whether to use your M.2 NVMe PCIe SSDs to configure RAID. (Default: Disabled)

- ⌄ **Chipset SATA Port Enable**  
Enables or disables the integrated SATA controllers. (Default: Enabled)
- ⌄ **Chipset SATA Port Hot plug**  
Enables or disable the hot plug capability for each SATA port. (Default: Disabled)
- ⌄ **Chipset SATA Port 0/1/2/3/4/5/6/7**  
Displays the information of the connected SATA device(s).
- **Network Stack Configuration**
  - ⌄ **Network Stack**  
Disables or enables booting from the network to install a GPT format OS, such as installing the OS from the Windows Deployment Services server. (Default: Disabled)
  - ⌄ **Ipv4 PXE Support**  
Enables or disables IPv4 PXE Support. This item is configurable only when **Network Stack** is enabled.
  - ⌄ **Ipv4 HTTP Support**  
Enables or disables HTTP boot support for IPv4. This item is configurable only when **Network Stack** is enabled.
  - ⌄ **Ipv6 PXE Support**  
Enables or disables IPv6 PXE Support. This item is configurable only when **Network Stack** is enabled.
  - ⌄ **Ipv6 HTTP Support**  
Enables or disables HTTP boot support for IPv6. This item is configurable only when **Network Stack** is enabled.
  - ⌄ **IPSEC Certificate**  
Enables or disables the Internet Protocol Security. This item is configurable only when **Network Stack** is enabled.
  - ⌄ **PXE boot wait time**  
Allows you to configure how long to wait before you can press <Esc> to abort the PXE boot. This item is configurable only when **Network Stack** is enabled. (Default: 0)
  - ⌄ **Media detect count**  
Allows you to set the number of times to check the presence of media. This item is configurable only when **Network Stack** is enabled. (Default: 1)
- **Intel(R) I210 Gigabit Network Connection**  
This sub-menu provides information on LAN configuration and related configuration options.

- **Miscellaneous**

- ⊞ **LEDs in System Power On State**  
Allows you to enable or disable motherboard LED lighting when the system is on.
  - ▶▶ Off Disables the selected lighting mode when the system is on.
  - ▶▶ On Enables the selected lighting mode when the system is on. (Default)
- ⊞ **LEDs in Sleep, Hibernation, and Soft Off States**  
Allows you to set the lighting mode of the motherboard LEDs in system S3/S4/S5 state. This item is configurable when **LEDs in System Power On State** is set to **On**.
  - ▶▶ Off Disables the selected lighting mode when the system enters S3/S4/S5 state. (Default)
  - ▶▶ On Enables the selected lighting mode when the system enters S3/S4/S5 state.
- ⊞ **Onboard Button Light**  
Allows you to enable or disable the LED lighting of the Clear CMOS button and power button when the system is on. (Default: On)
- ⊞ **Onboard Debug Port LED**  
Allows you to enable or disable the LED lighting of the motherboard debug LEDs when the system is on. (Default: On)
- ⊞ **PCIe Slot Configuration**  
Allows you to set the operation mode of the PCI Express slots to Gen 1, Gen 2, Gen 3, or Gen 4. Actual operation mode is subject to the hardware specification of each slot. **Auto** lets the BIOS automatically configure this setting. (Default: Auto)
- ⊞ **3DMark01 Enhancement**  
Allows you to determine whether to enhance some legacy benchmark performance. (Default: Disabled)
- ⊞ **IOMMU**  
Enables or disables AMD IOMMU support. (Default: Auto)
- ⊞ **AMD CPU fTPM**  
Enables or disables the TPM 2.0 function integrated in the AMD CPU. (Default: Disabled)
- **Trusted Computing**  
Enables or disables Trusted Platform Module (TPM).

■ AMD CBS

This sub-menu provides AMD CBS-related configuration options.

■ PC Health

☞ **Reset Case Open Status**

- ▶▶ Disabled Keeps or clears the record of previous chassis intrusion status. (Default)
- ▶▶ Enabled Clears the record of previous chassis intrusion status and the **Case Open** field will show "No" at next boot.

☞ **Case Open**

Displays the detection status of the chassis intrusion detection device attached to the motherboard CI header. If the system chassis cover is removed, this field will show "Yes", otherwise it will show "No". To clear the chassis intrusion status record, set **Reset Case Open Status** to **Enabled**, save the settings to the CMOS, and then restart your system.

☞ **CPU Vcore/CPU Vcore SOC/CPU VDD18/DRAM Channel A/B Voltage/DRAM Channel C/D Voltage/DDRVPP Channel A/B Voltage/DDRVPP Channel C/D Voltage/+3.3V/+5V/Chipset Core/+12V**

Displays the current system voltages.

- Smart Fan 5

- Monitor

Allows you to select a target to monitor and to make further adjustment. (Default: CPU FAN)

- Fan Speed Control

Allows you to determine whether to enable the fan speed control function and adjust the fan speed.

- ▶▶ Normal      Allows the fan to run at different speeds according to the temperature. You can adjust the fan speed with System Information Viewer based on your system requirements. (Default)
- ▶▶ Silent        Allows the fan to run at slow speeds.
- ▶▶ Manual        Allows you to control the fan speed in the curve graph.
- ▶▶ Full Speed    Allows the fan to run at full speeds.

- Fan Control Use Temperature Input

Allows you to select the reference temperature for fan speed control.

- Temperature Interval

Allows you to select the temperature interval for fan speed change.

- Fan/Pump Control mode

- ▶▶ Auto            Lets the BIOS automatically detect the type of fan/pump installed and sets the optimal control mode. (Default)
- ▶▶ Voltage        Voltage mode is recommended for a 3-pin fan/pump.
- ▶▶ PWM            PWM mode is recommended for a 4-pin fan/pump.

- Fan/Pump Stop

Enables or disables the fan/pump stop function. You can set the temperature limit using the temperature curve. The fan or pump stops operation when the temperature is lower than the limit. (Default: Disabled)

- Temperature

Displays the current temperature of the selected target area.

- Fan Speed

Displays current fan/pump speeds.

- Flow Rate

Displays the flow rate of your water cooling system.

(Note) The SYS\_FAN5A\_PUMP option can control the SYS\_FAN5A\_PUMP and SYS\_FAN5B\_PUMP connectors at the same time. The SYS\_FAN6A\_PUMP option can control the SYS\_FAN6A\_PUMP and SYS\_FAN6B\_PUMP connectors at the same time.

☞ **Temperature Warning Control**

Sets the warning threshold for temperature. When temperature exceeds the threshold, BIOS will emit warning sound. Options are: Disabled (default), 60°C/140°F, 70°C/158°F, 80°C/176°F, 90°C/194°F.

☞ **Fan/Pump Fail Warning**

Allows the system to emit warning sound if the fan/pump is not connected or fails. Check the fan/pump condition or fan/pump connection when this occurs. (Default: Disabled)

## 2-6 System Info.

This section provides information on your motherboard model and BIOS version. You can also select the default language used by the BIOS and manually set the system time.

### System Language

Selects the default language used by the BIOS.

### System Date

Sets the system date. The date format is week (read-only), month, date, and year. Use <Enter> to switch between the Month, Date, and Year fields and use the <Page Up> or <Page Down> key to set the desired value.

### System Time

Sets the system time. The time format is hour, minute, and second. For example, 1 p.m. is 13:00:00. Use <Enter> to switch between the Hour, Minute, and Second fields and use the <Page Up> or <Page Down> key to set the desired value.

### Access Level

Displays the current access level depending on the type of password protection used. (If no password is set, the default will display as **Administrator**.) The Administrator level allows you to make changes to all BIOS settings; the User level only allows you to make changes to certain BIOS settings but not all.

### Plug in Devices Info

Displays information on your SATA, PCI Express, and M.2 devices if installed.

### Q-Flash

Allows you to access the Q-Flash utility to update the BIOS or back up the current BIOS configuration.

## 2-7 Boot

### ☞ Boot Option Priorities

Specifies the overall boot order from the available devices. Removable storage devices that support GPT format will be prefixed with "UEFI:" string on the boot device list. To boot from an operating system that supports GPT partitioning, select the device prefixed with "UEFI:" string.

Or if you want to install an operating system that supports GPT partitioning such as Windows 10 64-bit, select the optical drive that contains the Windows 10 64-bit installation disc and is prefixed with "UEFI:" string.

### ☞ Bootup NumLock State

Enables or disables Numlock feature on the numeric keypad of the keyboard after the POST. (Default: On)

### ☞ Security Option

Specifies whether a password is required every time the system boots, or only when you enter BIOS Setup. After configuring this item, set the password(s) under the **Administrator Password/User Password** item.

▶▶ Setup A password is only required for entering the BIOS Setup program.

▶▶ System A password is required for booting the system and for entering the BIOS Setup program. (Default)

### ☞ Full Screen LOGO Show

Allows you to determine whether to display the GIGABYTE Logo at system startup. **Disabled** skips the GIGABYTE Logo when the system starts up. (Default: Enabled)

### ☞ Fast Boot

Enables or disables Fast Boot to shorten the OS boot process. **Ultra Fast** provides the fastest bootup speed. (Default: Disabled)

### ☞ SATA Support

▶▶ Last Boot SATA Devices Only Except for the previous boot drive, all SATA devices are disabled before the OS boot process completes. (Default)

▶▶ All SATA Devices All SATA devices are functional in the operating system and during the POST. This item is configurable only when **Fast Boot** is set to **Enabled** or **Ultra Fast**.

### ☞ NVMe Support

Allows you to enable or disable NVMe device(s). (Default: Enabled)

This item is configurable only when **Fast Boot** is set to **Enabled** or **Ultra Fast**.

### ⊞ **VGA Support**

Allows you to select which type of operating system to boot.

- ▶▶ Auto Enables legacy option ROM only.
- ▶▶ EFI Driver Enables EFI option ROM. (Default)

This item is configurable only when **Fast Boot** is set to **Enabled** or **Ultra Fast**.

### ⊞ **USB Support**

- ▶▶ Disabled All USB devices are disabled before the OS boot process completes.
- ▶▶ Full Initial All USB devices are functional in the operating system and during the POST. (Default)

- ▶▶ Partial Initial Part of the USB devices are disabled before the OS boot process completes.

This item is configurable only when **Fast Boot** is set to **Enabled** or **Ultra Fast**.

### ⊞ **NetWork Stack Driver Support**

- ▶▶ Disabled Disables booting from the network. (Default)
- ▶▶ Enabled Enables booting from the network.

This item is configurable only when **Fast Boot** is set to **Enabled** or **Ultra Fast**.

### ⊞ **CSM Support**

Enables or disables UEFI CSM (Compatibility Support Module) to support a legacy PC boot process.

- ▶▶ Disabled Disables UEFI CSM and supports UEFI BIOS boot process only.
- ▶▶ Enabled Enables UEFI CSM. (Default)

### ⊞ **LAN PXE Boot Option ROM**

Allows you to select whether to enable the legacy option ROM for the LAN controller. (Default: Disabled)

This item is configurable only when **CSM Support** is set to **Enabled**.

### ⊞ **Storage Boot Option Control**

Allows you to select whether to enable the UEFI or legacy option ROM for the storage device controller.

- ▶▶ Disabled Disables option ROM.
- ▶▶ UEFI Only Enables UEFI option ROM only. (Default)
- ▶▶ Legacy Only Enables legacy option ROM only.

This item is configurable only when **CSM Support** is set to **Enabled**.

### ⊞ **Other PCI Device ROM Priority**

Allows you to select whether to enable the UEFI or Legacy option ROM for the PCI device controller other than the LAN, storage device, and graphics controllers.

- ▶▶ Disabled Disables option ROM.
- ▶▶ UEFI Only Enables UEFI option ROM only. (Default)
- ▶▶ Legacy Only Enables legacy option ROM only.

This item is configurable only when **CSM Support** is set to **Enabled**.

### ⊞ **Administrator Password**

Allows you to configure an administrator password. Press <Enter> on this item, type the password, and then press <Enter>. You will be requested to confirm the password. Type the password again and press <Enter>. You must enter the administrator password (or user password) at system startup and when entering BIOS Setup. Differing from the user password, the administrator password allows you to make changes to all BIOS settings.

↳ **User Password**

Allows you to configure a user password. Press <Enter> on this item, type the password, and then press <Enter>. You will be requested to confirm the password. Type the password again and press <Enter>. You must enter the administrator password (or user password) at system startup and when entering BIOS Setup. However, the user password only allows you to make changes to certain BIOS settings but not all. To cancel the password, press <Enter> on the password item and when requested for the password, enter the correct one first. When prompted for a new password, press <Enter> without entering any password. Press <Enter> again when prompted to confirm.

NOTE: Before setting the User Password, be sure to set the Administrator Password first.

■ **Secure Boot**

Allows you to enable or disable Secure Boot and configure related settings. This item is configurable only when **CSM Support** is set to **Disabled**.

↳ **Preferred Operating Mode**

Allows you to select whether to enter Easy mode or Advanced mode after entering BIOS Setup. **Auto** enters the BIOS mode where it was last time. (Default: Auto)

## 2-8 Save & Exit

### Save & Exit Setup

Press <Enter> on this item and select **Yes**. This saves the changes to the CMOS and exits the BIOS Setup program. Select **No** or press <Esc> to return to the BIOS Setup Main Menu.

### Exit Without Saving

Press <Enter> on this item and select **Yes**. This exits the BIOS Setup without saving the changes made in BIOS Setup to the CMOS. Select **No** or press <Esc> to return to the BIOS Setup Main Menu.

### Load Optimized Defaults

Press <Enter> on this item and select **Yes** to load the optimal BIOS default settings. The BIOS defaults settings help the system to operate in optimum state. Always load the Optimized defaults after updating the BIOS or after clearing the CMOS values.

### Boot Override

Allows you to select a device to boot immediately. Press <Enter> on the device you select and select **Yes** to confirm. Your system will restart automatically and boot from that device.

### Save Profiles

This function allows you to save the current BIOS settings to a profile. You can create up to 8 profiles and save as Setup Profile 1~ Setup Profile 8. Press <Enter> to complete. Or you can select **Select File in HDD/FDD/USB** to save the profile to your storage device.

### Load Profiles

If your system becomes unstable and you have loaded the BIOS default settings, you can use this function to load the BIOS settings from a profile created before, without the hassles of reconfiguring the BIOS settings. First select the profile you wish to load and then press <Enter> to complete. You can select **Select File in HDD/FDD/USB** to input the profile previously created from your storage device or load the profile automatically created by the BIOS, such as reverting the BIOS settings to the last settings that worked properly (last known good record).

# Chapter 3 Configuring a RAID Set

## RAID Levels

	RAID 0	RAID 1	RAID 10
Minimum Number of Hard Drives	≥2	2	4
Array Capacity	Number of hard drives * Size of the smallest drive	Size of the smallest drive	(Number of hard drives/2) * Size of the smallest drive
Fault Tolerance	No	Yes	Yes

### To configure SATA hard drive(s), follow the steps below:

- A. Install hard drive(s) in your computer.
- B. Configure SATA controller mode in BIOS Setup.
- C. Configure a RAID array in RAID BIOS <sup>(Note 1)</sup>
- D. Install the SATA RAID/AHCI driver and operating system

### Before you begin

- At least two SATA hard drives or SSDs <sup>(Note 2)</sup> (to ensure optimal performance, it is recommended that you use two hard drives with identical model and capacity). <sup>(Note 3)</sup>
- A Windows setup disk.
- Motherboard driver disk.
- A USB thumb drive.

## 3-1 Configuring SATA Controllers

### A. Installing SATA hard drive(s) in your computer

Install the hard drives/SSDs in the SATA/M.2 connectors on the motherboard. Then connect the power connectors from your power supply to the hard drives.

(Note 1) Skip this step if you do not want to create RAID array on the SATA controller.

(Note 2) An M.2 PCIe SSD cannot be used to set up a RAID set either with an M.2 SATA SSD or a SATA hard drive.

(Note 3) Refer to "Internal Connectors," for the installation notices for the M.2, and SATA connectors.

## B. Configuring SATA controller mode in BIOS Setup

Make sure to configure the SATA controller mode correctly in system BIOS Setup.

Step:

Turn on your computer and press <Delete> to enter BIOS Setup during the POST (Power-On Self-Test). Under **Settings** > **IO Ports**, set **SATA Configuration**/**SATA Mode** to **RAID** (Figure 1). Then save the settings and restart your computer. (If you want to use NVMe PCIe SSDs to configure RAID, make sure to set **NVMe RAID mode** to **Enabled**. Then set how the bandwidth of the PCIe slot you use is divided. Save the changes and exit BIOS Setup.)

Figure 1

## C. UEFI RAID Configuration

Step 1:

In BIOS Setup, go to **Boot** and set **CSM Support** to **Disabled** (Figure 2). Save the changes and exit BIOS Setup.

Figure 2

The BIOS Setup menus described in this section may differ from the exact settings for your motherboard. The actual BIOS Setup menu options you will see shall depend on the motherboard you have and the BIOS version.

Step 2:

After the system reboot, enter BIOS Setup again. Then enter the **Settings\IO Ports\RAIDXpert2 Configuration Utility** sub-menu (Figure 3).

Figure 3

Step 3:

On the RAIDXpert2 Configuration Utility screen, press <Enter> on **Array Management** to enter the **Create Array** screen. Then, select a RAID level (Figure 4). RAID levels supported include RAID 0, RAID 1, and RAID 10 (the selections available depend on the number of the hard drives being installed). Next, press <Enter> on **Select Physical Disks** to enter the **Select Physical Disks** screen.

Figure 4

Step 4:

On the **Select Physical Disks** screen, select the hard drives to be included in the RAID array and set them to **Enabled**. Next, use the down arrow key to move to **Apply Changes** and press <Enter> (Figure 5). Then return to the previous screen and set the **Array Size**, **Array Size Unit**, **Read Cache Policy** and **Write Cache Policy**.

Figure 5

Step 5:

After setting the capacity, move to **Create Array** and press <Enter> to begin. (Figure 6)

Figure 6

After completing, you'll be brought back to the **Array Management** screen. Under **Manage Array Properties** you can see the new RAID volume and information on RAID level, array name, array capacity, etc. (Figure 7)

Figure 7

### Delete RAID Volume

To delete a RAID array, select the array to be deleted on the RAIDxpert2 Configuration Utility\Array Management\Delete Array screen. Press <Enter> on **Delete Array** to enter the **Delete** screen. Then set **Confirm** to **Enabled** and press <Enter> on **Yes** (Figure 8).

Figure 8

## 3-2 Installing the SATA RAID/AHCI Driver and Operating System

With the correct BIOS settings, you are ready to install the operating system.

### A. Installing Windows

As some operating systems already include SATA RAID/AHCI driver, you do not need to install separate RAID/AHCI driver during the Windows installation process. After the operating system is installed, we recommend that you install all required drivers from the motherboard driver disk using "Xpress Install" to ensure system performance and compatibility. If the operating system to be installed requires that you provide additional SATA RAID/AHCI driver during the OS installation process, please refer to the steps below:

Step 1:

Copy the **Hw10** folder under the **\BootDrv** folder in the driver disk to your USB thumb drive.

Step 2:

Boot from the Windows setup disk and perform standard OS installation steps. When the screen requesting you to load the driver appears, select **Browse**.

Step 3:

Insert the USB thumb drive and then browse to the location of the driver. The location of the driver is as follows:  
Windows 64-bit: `\Hw10\RAID\64`

Step 4:

When a screen as shown in Figure 1 appears, select **AMD-RAID Bottom Device** first and click **Next** to load the driver. Then select **AMD-RAID Controller** and click **Next** to load the driver. Finally, continue the OS installation.

Figure 1

## B. Rebuilding an Array

Rebuilding is the process of restoring data to a hard drive from other drives in the array. Rebuilding applies only to fault-tolerant arrays such as RAID 1 and RAID 10 arrays. To replace the old drive, make sure to use a new drive of equal or greater capacity. The procedures below assume a new drive is added to replace a failed drive to rebuild a RAID 1 array.

While in the operating system, make sure the Chipset and RAID drivers have been installed from the motherboard driver disk. Then double-click the **RAIDXpert2** icon on the desktop to launch the RAID utility.

Step 1:  
Enter the login ID and password (default: "admin"), and then click **Submit** to launch **AMD RAIDxpert2**.

Step 2:  
In the **Disk Devices** section, left-click your mouse twice on the newly-added hard drive.

Step 3:  
On the next screen, select **Assign as Global Spare** and click **Confirm**.

Step 4:  
During the rebuild process, you can select the array that is being built (displayed in red) in the **Active Volumes** section to check the current progress.

Step 5:  
Then rebuild is complete when the **Task State** column shows "COMPLETED."

## Chapter 4 Drivers Installation

- Before installing the drivers, first install the operating system.
- After installing the operating system, insert the motherboard driver disk into your optical drive. Click on the message "Tap to choose what happens with this disc" on the top-right corner of the screen and select "Run **Run.exe.**" (Or go to My Computer, double-click the optical drive and execute the Run.exe program.)

### 4-1 Drivers & Software

"Xpress Install" will automatically scan your system and then list all of the drivers that are recommended to install. You can click the **Xpress Install** button and "Xpress Install" will install all of the selected drivers. Or click the arrow **Install** icon to individually install the drivers you need.

- Please ignore the popup dialog box(es) (e.g. the **Found New Hardware Wizard**) displayed when "Xpress Install" is installing the drivers. Failure to do so may affect the driver installation.
- Some device drivers will restart your system automatically during the driver installation. After the system restart, "Xpress Install" will continue to install other drivers.

## 4-2 Application Software

This page displays the apps that GIGABYTE develops and some free software. You can select the apps you want and click the **Install**  icon to begin the installation.

## 4-3 Information

This page provides detailed information on the drivers on the driver disk. The **Contact** page provides contact information of the GIGABYTE Taiwan headquarter. You can click the URL on this page to link to the GIGABYTE website to check more information on the GIGABYTE headquarter or worldwide branch offices.

## Chapter 5 Unique Features

### 5-1 BIOS Update Utilities

GIGABYTE motherboards provide two unique BIOS update tools, Q-Flash™ and @BIOS™. GIGABYTE Q-Flash and @BIOS are easy-to-use and allow you to update the BIOS without the need to enter MS-DOS mode. Additionally, this motherboard features the DualBIOS™ design and supports Q-Flash Plus, providing multiple protection for the safety and stability of your computer.

#### What is DualBIOS™?

Motherboards that support DualBIOS have two BIOS onboard, a main BIOS and a backup BIOS. Normally, the system works on the main BIOS. However, if the main BIOS is corrupted or damaged, the backup BIOS will take over on the next system boot to ensure normal system operation.

#### What is Q-Flash Plus?

Q-Flash Plus allows you to update the BIOS when your system is off (S5 shutdown state). Save the latest BIOS on a USB thumb drive and plug it into the dedicated port, and then you can now flash the BIOS automatically by simply pressing the Q-Flash Plus button.

#### What is Q-Flash™?

With Q-Flash you can update the system BIOS without having to enter operating systems like MS-DOS or Windows first. Embedded in the BIOS, the Q-Flash tool frees you from the hassles of going through complicated BIOS flashing process.

#### What is @BIOS™?

@BIOS allows you to update the system BIOS while in the Windows environment. @BIOS will download the latest BIOS file from the nearest @BIOS server site and update the BIOS.

### 5-1-1 Updating the BIOS with the Q-Flash Utility

#### A. Before You Begin

1. From GIGABYTE's website, download the latest compressed BIOS update file that matches your motherboard model.
2. Extract the file and save the new BIOS file (e.g. TRX40DESIGNARE.F1) to your USB flash drive, or hard drive. Note: The USB flash drive or hard drive must use FAT32/16/12 file system.
3. Restart the system. During the POST, press the <End> key to enter Q-Flash. Note: You can access Q-Flash by either pressing the <End> key during the POST or click the **Q-Flash** icon (or press the <F8> key) in BIOS Setup. However, if the BIOS update file is saved to a hard drive in RAID/AHCI mode or a hard drive attached to an independent SATA controller, use the <End> key during the POST to access Q-Flash.

Because BIOS flashing is potentially risky, please do it with caution. Inadequate BIOS flashing may result in system malfunction.

Click **Q-Flash (F8)** or select the Q-Flash item on the System Info menu to access Q-Flash.

## B. Updating the BIOS

In the main menu of Q-Flash, use the keyboard or mouse to select an item to execute. When updating the BIOS, choose the location where the BIOS file is saved. The following procedure assumes that you have saved the BIOS file to a USB flash drive.

Step 1:

1. Insert the USB flash drive containing the BIOS file into the computer. In the main screen of Q-Flash, select **Update BIOS**.

- The **Save BIOS** option allows you to save the current BIOS file.
- Q-Flash only supports USB flash drive or hard drives using FAT32/16/12 file system.
- If the BIOS update file is saved to a hard drive in RAID/AHCI mode or a hard drive attached to an independent SATA controller, use the <End> key during the POST to access Q-Flash.

2. Select the BIOS update file.

**Make sure the BIOS update file matches your motherboard model.**

Step 2:

The screen will show that the BIOS file is being read from your USB flash drive. Please select **Fast** or **Intact** to begin the BIOS update. The screen will then display the update process.

- Do not turn off or restart the system when the system is reading/updating the BIOS.
- Do not remove the USB flash drive or hard drive when the system is updating the BIOS.

Step 3:

The system will restart after the update process is complete.

Step 4:

During the POST, press <Delete> to enter BIOS Setup. Select **Load Optimized Defaults** on the **Save & Exit** screen and press <Enter> to load BIOS defaults. System will re-detect all peripheral devices after a BIOS update, so we recommend that you reload BIOS defaults.

Select **Yes** to load BIOS defaults

Step 5:

Select **Save & Exit Setup** and press <Enter>. And then select **Yes** to save settings to CMOS and exit BIOS Setup. The procedure is complete after the system restarts.

## 5-1-2 Updating the BIOS with the @BIOS Utility

### A. Before You Begin

1. In Windows, close all applications and TSR (Terminate and Stay Resident) programs. This helps prevent unexpected failures when performing a BIOS update.
2. If the BIOS is being updated via the Internet, ensure the Internet connection is stable and do NOT interrupt the Internet connection (for example, avoid a power loss or switching off the Internet). Failure to do so may result in a corrupted BIOS or a system that is unable to start.
3. GIGABYTE product warranty does not cover any BIOS damage or system failure resulting from an inadequate BIOS flashing.

### B. Using @BIOS

#### 1. Update the BIOS Using the Internet Update Function:

 Click **Update from Server**, select the @BIOS server site closest to your location and then download the BIOS file that matches your motherboard model. Follow the on-screen instructions to complete.

If the BIOS update file for your motherboard is not present on the @BIOS server site, please manually download the BIOS update file from GIGABYTE's website and follow the instructions in "Update the BIOS without Using the Internet Update Function" below.

#### 2. Update the BIOS without Using the Internet Update Function:

 Click **Update from File**, then select the location where you save the BIOS update file obtained from the Internet or through other source. Follow the on-screen instructions to complete.

#### 3. Save the Current BIOS File:

 Click **Save to File** to save the current BIOS file.

#### 4. Change the Boot-up Logo:

 Click **Upload new image** in Face-Wizard and you will be able to change the boot-up logo with your own picture, creating a personalized boot-up screen. Click **Backup current image** to save the current boot-up logo.

Supported image formats include jpg, bmp, and gif.

### C. After Updating the BIOS

Restart your system after updating the BIOS.

- Make sure that the BIOS file to be flashed matches your motherboard model. Updating the BIOS with an incorrect BIOS file could cause your system not to boot.
- Do not turn off the system or remove the power during the BIOS update process, or the BIOS may corrupt and the system may not boot.

### 5-1-3 Using Q-Flash Plus

#### A. Before you use Q-Flash Plus, follow the steps below in sequence:

1. From GIGABYTE's website, download the latest compressed BIOS update file that matches your motherboard model.
2. Uncompress the downloaded BIOS file, save it to your USB flash drive, and rename it to **GIGABYTE.bin**.  
**Note:** The USB flash drive must use the FAT32 file system and it must be a USB 2.0 flash drive.
3. Insert the USB flash drive into the Q-Flash Plus port on the back panel.
4. Connect the power cables to the 12V power connector (connect either one if there are two) and main power connector.

#### B. Using Q-Flash Plus

Press the Q-Flash Plus button on the back panel and the system will automatically search and match the BIOS file in the USB flash drive on the Q-Flash Plus port. The Q-Flash Plus button will flash during the BIOS matching and flashing process. Wait for 2-3 minutes and the button will stop flashing when the BIOS flashing is complete.

- Before using the Q-Flash Plus function, make sure that your system is off (S5 shutdown state).
- If your motherboard has a BIOS switch and a SB switch, reset them to their default settings. (Default setting for the BIOS switch: Boot from the main BIOS; default setting for the SB switch: Dual BIOS)
- After the main BIOS is flashed, the system will reboot automatically and then DualBIOS™ will continue to update the backup BIOS. After completion, the system will reboot again and boot from the main BIOS.
- Q-Flash Plus will update the main BIOS only if run without the CPU installed. The system will shut down upon completion.

## 5-2 APP Center

GIGABYTE App Center gives you easy access to a wealth of GIGABYTE apps that help you get the most from your GIGABYTE motherboard (Note). Using a simple, unified user interface, GIGABYTE App Center allows you to easily launch all GIGABYTE apps installed on your system, check related updates online, and download the apps, drivers, and BIOS.

### Running the APP Center

Insert the motherboard driver disc. On the Autorun screen, go to **Application Software** Install GIGABYTE Utilities to install GIGABYTE App Center and the selected apps. Restart your computer after the installation is complete. In Desktop mode, click the App Center icon  in the notification area to launch the App Center utility (Figure 1). On the main menu, you can select an app to run or click **LiveUpdate** to update an app online.

Figure 1

If the App Center is closed, you can restart it by clicking **Launch App Center** on the Start menu (Figure 2).

Figure 2

(Note) Available applications in APP Center may differ by motherboard model. Supported functions of each application may also vary depending on motherboard specifications.

## 5-2-1 AutoGreen

AutoGreen<sup>(Note)</sup> is an easy-to-use tool that provides users with simple options to enable system power savings via a Bluetooth-enabled smart phone/tablet device. When the device is out of the range of the computer's Bluetooth receiver, the system will enter the specified power saving mode. Before using this app, you need to turn on Bluetooth on both your computer and smart phone/tablet device.

### The AutoGreen Interface

#### Control Tab:

The **Control** tab allows you to select a system power saving mode.

Button	Description
Disable	Disables this function
Standby	Enters Power on Suspend mode
Suspend	Enters Suspend to RAM mode
Hibernate	Enters Suspend to Disk mode

#### Bluetooth Devices Tab:

The **Bluetooth** tab allows you to pair your smart phone/tablet device with the Bluetooth receiver on your computer. Press **Refresh** to let AutoGreen search for the Bluetooth devices around you. A message will appear on both your computer and smart phone/tablet device prompting you to compare the passcodes on the two devices. Confirm to complete the pairing process.

(Note) Once your smart phone/tablet device has been paired with your AutoGreen-enabled computer, you'll not be able to use it to connect to other Bluetooth device(s).

## 5-2-2 Cloud Station

**Cloud STATION** GIGABYTE Cloud Station (Server) is composed of HomeCloud, GIGABYTE Remote, Remote OC, and HotSpot, which allow your smart phone, tablet device, and remote computer to communicate, share resources, and control the host computer via wireless connection. Cloud Station allows your computer to share files with another computer that has Cloud Station (Server) installed.

### Before You Begin:

- To use HomeCloud, GIGABYTE Remote, and Remote OC, you must install GIGABYTE Cloud Station on your smart phone/tablet device. (For Android systems, please download the app from Google Play; for iOS systems, please download it from App Store.)<sup>(Note 1)</sup>
- To share HomeCloud files between computers, you need to install Cloud Station (Server) on the host computer and Cloud Station on the remote computer.
- Your smart phone/tablet device must have Android 4.0/iOS 6.0 or above version.
- The first time you use HomeCloud, GIGABYTE Remote, and Remote OC, you must sign in with your Google/Facebook/Windows Live account. Be sure to use the same account to sign in on your smart phone/tablet device and computers.

### HomeCloud

HomeCloud allows you to upload/download/back up files<sup>(Note 2)</sup> from your smart phone/tablet device/computer to the host computer.

### The HomeCloud Interface

Cloud Station (Server):

(Note 1) You can use your smart phone/tablet device to scan the QR code on the HomeCloud UI to link to the download page of the GIGABYTE Cloud Station on App Store or Google Play.

(Note 2) For iOS systems, the file types are limited to image/video files.

## Cloud Station:

## Using HomeCloud

### Step 1:

Launch HomeCloud on the host computer (installed with Cloud Station (Server)), sign in with your Google/Facebook/Windows Live account or select the account on the **Account List**. Then enable **HomeCloud Function**. To automatically enable this function after system reboot, enable **Always run on next reboot**.

### Step 2:

Run Cloud Station on your smart phone/tablet device/remote computer, sign in with the same account you use for HomeCloud on your host computer. Tap on **HomeCloud** to perform the following functions:

### On the Host Computer:

Option	Function
Account List	Displays currently signed in account(s).
Remove	Remove the selected account.
Share Folder	Displays the shared folder directory of the currently signed in account.
Open Folder	Access the shared folder of the currently signed in account.

### On the Smart Phone/Tablet Device/Remote Computer:

Option	Function
All Picture Files	File Upload: Tap on the folder, browse and select the files inside. Tap on the menu icon and select <b>Upload selected Files</b> to upload the files to your computer. File Download: Tap on the folder and then tap on the menu icon, select <b>Download Files</b> . You can browse the files and select the files that you want to download to your smart phone/tablet device.
All Music Files	
All Video Files	
All Files	
User Contacts	Tap on the folder and then tap on the menu icon to use the options including <b>Backup to remote, Restore From remote, View Remote Contact, and Reselect Computers</b> .
Call Log	

## GIGABYTE Remote

GIGABYTE Remote allows you to use your smart phone/tablet device to remotely control the mouse/keyboard/Windows Media Player on your computer.

### The GIGABYTE Remote Interface

## Using GIGABYTE Remote

Step 1:

On the host computer, launch GIGABYTE Remote and enable **GIGABYTE Remote Function**. To automatically enable this function after system reboot, enable **Always run on next reboot**.

Step 2:

Run GIGABYTE Cloud Station on your smart phone/tablet device, sign in with the same account you use for HomeCloud on your computer. Tap on **Remote Control** to perform the following remote controls:

### On the Smart Phone/Tablet Device:

Option	Function
Mouse	Remotely perform mouse functionalities including dragging, right/left-clicking, and holding the mouse left button.
Keyboard	Remotely control your keyboard such as text input (tap on Real-Time Mode to type texts) or deletion.
Media	Remotely configure and control the currently running Windows Media Player application on your computer.

## Remote OC

Remote OC provides you with remote control options including overclocking and system tweaking, system monitoring plus the ability to also remotely power down/reset the PC when needed.

### The Remote OC Interface

## Using Remote OC

Step 1:

On the host computer, launch Remote OC and enable **Remote OC Function**. To automatically enable this function after system reboot, enable **Always run on next reboot**.

Step 2:

Run GIGABYTE Cloud Station on your smart phone/tablet device, sign in with the same account you use for HomeCloud on your computer. Tap on **Remote OC** to perform the following functions:

### On the Smart Phone/Tablet Device:

Option	Function
Tuner	Allows you to change CPU/memory frequency and voltage settings.
INFO	Displays the system information, including the CPU, motherboard, and memory.
HW MONIT	Allows you to monitor system temperatures, voltages, and fan speeds.
QUICK BOOST	Provides you with three preset overclocking configurations.
CONTROL	Allows you to remotely reboot or shut down your computer.

## HotSpot

HotSpot turns your computer into a virtual wireless access point and allows you to share your connection with your other wireless devices. Make sure your computer has been connected to a network and Wi-Fi is enabled.

### The HotSpot Interface

### Using HotSpot:

Configuring your host computer:

The options are as follows. Make sure to click **Start** to complete.

- **Make this network connection available for sharing:**  
Select a currently running network connection you want to share.
- **Available HotSpot device:**  
Select a network virtual adapter. If there are more than one Wi-Fi card on your computer, you need to select the one you want to use from the list.
- **SSID:**  
The hotspot SSID name. You can keep the default name or create your own one.
- **HotSpot Password (must have at least 8 characters):**  
The password is required when other wireless devices want to access the Internet through the virtual wireless access point. You can keep the default name or create your own one. The password must have at least 8 characters and cannot be empty.

### Sharing your connection with other wireless devices:

First make sure Wi-Fi is enabled on the wireless devices. Then browse to the network configuration screen, search for available Wi-Fi networks, and tap the name of your virtual wireless access point, enter the password, and confirm.

## 5-2-3 EasyTune

GIGABYTE's EasyTune is a simple and easy-to-use interface that allows users to fine-tune their system settings or do overclock/overvoltage in Windows environment.

### The EasyTune Interface

### Tabs Information

Tab	Description
 Smart Boost	The <b>Smart Boost</b> tab provides you with different levels of CPU frequency to choose to achieve desired system performance. After making changes, be sure to restart your system for these changes to take effect.
 Advanced CPU OC	The <b>Advanced CPU OC</b> tab allows you to set CPU base clock, frequency, and voltages, and integrated graphics frequency. You can save the current settings to a profile. You can create up to 2 profiles.
 Advanced DDR OC	The <b>Advanced DDR OC</b> tab allows you to set the memory clock.
 Advanced Power	The <b>Advanced Power</b> tab allows you to adjust voltages.
 Hotkey	The <b>HotKey</b> tab allows you to set hotkeys for your profiles.

Available functions in EasyTune may vary by motherboard model and CPU. Grayed-out area(s) indicates that the item is not configurable or the function is not supported.

Incorrectly doing overclock/overvoltage may result in damage to the hardware components such as CPU, chipset, and memory and reduce the useful life of these components. Before you do the overclock/overvoltage, make sure that you fully know each function of EasyTune, or system instability or other unexpected results may occur.

## 5-2-4 Fast Boot

Through the simple GIGABYTE Fast Boot interface, you can enable or change the **Fast Boot** setting right in the operating system.

### The Fast Boot Interface

### Using Fast Boot

- **BIOS Fast Boot:**

This option is the same as the **Fast Boot** option <sup>(Note)</sup> in BIOS Setup. It allows you to enable or disable the fast boot function to shorten OS boot time.

After you configure the settings, click **Save** to save and click **Exit**. The settings will take effect on next boot. If you click the **Enter BIOS Setup Now** button, the system will restart and enter BIOS Setup immediately.

(Note) For more details about this function, refer to Chapter 2, "BIOS Setup."

## 5-2-5 Game Boost

This app allows you to flexibly manage your applications to optimize your gaming performance by freeing up system resources and memory usage.

### The Game Boost Interface

### Using Game Boost

Select the application you want to suspend and then click **Go** to optimize your system for gaming. To revert the computer back to the state it was before, click **Revert**. In addition, two hotkeys are provided as follows:

- **Optimize(Ctrl+Alt+B)**: Automatically optimizes your gaming platform and gaming performance.
- **Revert(Ctrl+Alt+R)**: Restores your computer back to the state before the gaming begins.

## 5-2-6 RGB Fusion

This application allows you to enable or specify the lighting mode of the select device <sup>(Note 1)</sup> while in the Windows environment.

### The RGB Fusion Interface

### Using RGB Fusion

- **The  icon on the top right corner:** Allows you to return to the main menu.
- **The  icon on the top right corner:** Allows your computer to connect to the GIGABYTE RGB Fusion app installed on your handheld devices. <sup>(Note 2)</sup>
- Click the icon of the desired device and select the LED color/ lighting behaviour on the right section of the screen.

Static	All LEDs emit a single color.
Pulse	All LEDs simultaneously fade in and fade out.
Flash	All LEDs simultaneously flash on and off.
Double Flash	All LEDs flash in an interlaced pattern.
Color Cycle	All LEDs simultaneously cycle through a full spectrum of colors.
Music	All LEDs are synchronized with your music.
Random	Single LED regions flash randomly.
Wave	A full color spectrum cascades throughout the LED.
Game	All LEDs are synchronized with your game.
Off	Turn off all LEDs.

(Note 1) RGB Fusion will automatically search for the devices that have LED lighting feature and display them on the list.

(Note 2) Please download the **RGB Fusion** app from App Store or Google Play.

- Options for controlling the LEDs on the motherboard and digital LED strip. Click the motherboard icon for further settings. <sup>(Note)</sup>

Select your desired area and select the LED color/ lighting behaviour on the right section of the screen.

Static	The selected region LEDs emit a single color.
Pulse	The selected region LEDs simultaneously fade in and fade out.
Flash	The selected region LEDs simultaneously flash on and off.
Double Flash	All LEDs flash in an interlaced pattern.
Color Cycle	All LEDs simultaneously cycle through a full spectrum of colors.
Digital Wave	A full color spectrum cascades throughout the armor LED.
Digital A~I Mode	Provides multiple digital lighting mode throughout the armor LED and LED strip.
Off	Disable the selected region LEDs.

(Note) Regions/Modes/Colors available may vary by motherboard.

## 5-2-7 Smart Keyboard

GIGABYTE Smart Keyboard allows you to set your own hotkeys using the F1 through F12 keys. You can use the customized hotkeys to change the mouse sensitivity, replace a word or password, open a file or an application, all of which helps to make the most out of your keyboard and mouse.

### The Smart Keyboard Interface

### Using Smart Keyboard

Select one of the F1 through F12 keys and configure the following functions:

- **Marco Key:**  
Allows you to assign key strokes to the selected key, or use the key to record mouse location, or set time interval between each keystroke.
- **Sniper Key:**  
Using this option, you can switch the mouse sensitivity when you are in sniper mode for better sniper accuracy.
- **Smart Cut:**  
Allows you to create keyboard shortcuts for a file or an application.
- **Smart Key:**  
Allows you to give the selected key the ability to replace a word or password.
- **Disable:**  
Allows you to disable the functionality of particular key(s).

After completing the settings, make sure to click **Enable keyboard monitor function** on the top right corner.

- **Save:**  
Save current settings as a profile.
- **Load:**  
Load a previously save profile.

(Note) It is recommended that Smart Keyboard be closed if it violates the end user license agreement of your game.

## 5-2-8 Smart Backup

Smart Backup allows you to back up a partition as an image file every hour. You can use these images to restore your system or files when needed.

The Smart Backup main menu:

Button	Description
Settings	Allows you to select the source and destination partition
Start	Allows you to create a rescue drive
Backup Now	Allows you to perform the backup immediately
File Recovery...	Allows you to recover your files from the backup image
System Recovery...	Allows you to recover your system from the backup image

- Smart Backup only supports NTFS file system.
- You need to select the destination partition in **Settings** the first time you use Smart Backup.
- The **Backup Now** button will be available only after 10 minutes you have logged in Windows.
- Select the **Always run on next reboot** checkbox to automatically enable Smart Backup after system reboot.

### Creating a backup:

Click the **Settings** button on the main menu. In the **Settings** dialog box, select the source partition and destination partition and click **OK**. The initial backup will start after 10 minutes and regular backup will be performed hourly. Note: By default, all partitions on the system drive are selected as the backup source. The backup destination cannot be on the same partition as the backup source.

### Saving the backup to a network location:

If you want to save the backup to a network location, select **Browse network location**. Make sure your computer and the computer where you want to save the backup are in the same domain. Choose the network location where you want to store the backup and enter the user name and password. Follow the on-screen instructions to complete.

### Recovering a file:

Click the **File Recovery** button on the main menu. Use the time slider on the top of the popped out window to select a previous backup time. The right pane will display the backed-up partitions in the backup destination (in the **My Backup** folder). Browse to the file you want and copy it.

## Recovering your system with Smart Backup:

Steps:

1. Click the **System Recovery** button on the main menu.
2. Select the location where your backup is saved.
3. Use the time slider to select a time point.
4. Select a partition backup created on the selected time point and click **Restore**.
5. Confirm whether to restart your system to proceed with the restore immediately or later. Once you respond "Yes" the system will restart to the Windows recovery environment. Follow the onscreen instructions to restore your system.

All of your files and programs will be deleted and replaced with those on the selected backup. If needed, be sure to make a copy of your data before the restore.

## 5-2-9 System Information Viewer

GIGABYTE System Information Viewer allows you to monitor and adjust the fan speed in the operating system. You can also display the hardware monitor information on the desktop to view the system status at any time.

### The System Information Viewer Interface

### Tabs Information

Tab	Description
 System Information	The <b>System Information</b> tab provides information on the installed CPU, motherboard, and the BIOS version.
 Smart Fan 5 Auto	The <b>Smart Fan 5 Auto</b> tab allows you to specify a Smart Fan mode.
 Smart Fan 5 Advanced	The <b>Smart Fan 5 Advanced</b> tab allows you to adjust the smart fan speed. The fans will run at different speeds according to system temperatures. Using the <b>Smart Fan</b> option you can adjust the fan's workload according system temperatures or you can fix the fan speeds using the <b>RPM Fixed Mode</b> option. Click the <b>Calibrate</b> button and the fan speed will be shown in relation to overall fan workload after calibration. The <b>Reset</b> button can revert the fan settings back to the last saved values.
 System Alert	The <b>System Alert</b> tab allows you to monitor hardware temperature, voltage and fan speed, and set temperature/fan speed alarm.  allows you to select what information to be displayed in quick mode (by default, all of the hardware information are displayed);  allows you to enable alert notification, click <b>Apply</b> after selection.
 Record	The <b>Record</b> tab allows you to record changes in system voltages, temperatures, fan speeds, and noise. Please note, the recording will stop if you exit the <b>Record</b> tab during the recording process.

The speed control function requires the use of a fan with fan speed control design.

## 5-2-10 Smart Survey

GIGABYTE Smart Survey collects, processes, and sort certain types of non-personal information on how you and others use our motherboards. The information collected is data related to system specs, including CPU model, OS version, MAC address, memory etc. This information is used to help us understand how well our products perform over time, to detect issues and to identify potential product improvements.

### The Smart Survey Interface

### Using Smart Survey

- **Clicking "Here":**  
Allows you to check the complete list of collected data.
- **Sending Device Data to GIGABYTE:**  
Selecting **I Agree** means you consent to GIGABYTE's collection of your device data. Smart Survey will not collect any data if you select **I Do Not Agree**.
- **Clicking "Delete All":**  
All data will be immediately deleted from Gigabyte server.

## 5-2-11 USB Blocker

GIGABYTE USB Blocker provides you with an easy-to-use interface that allows you to block certain USB device types on your PC. Devices classes that are blocked will be ignored by the operating system.

### The USB Blocker Interface

### Using USB Blocker

Select the class of USB device that you would like to block or unblock. Double left-click to change the **Blocked** or **Unblocked** status and click **OK**. Then enter your password and click **OK** to complete.

## 5-2-12 USB TurboCharger

GIGABYTE USB TurboCharger supports the quick charging technologies <sup>(Note 1)</sup> of Apple's and Android™ QC 3.0's smart phones/tablet devices. It allows you to quick-charge your device(s) connected to the front USB 3.2 Gen 1 type A port (s) with the required mode.

### The USB TurboCharger Interface

### Using USB TurboCharger

The quick-charging performance of each connector may vary by the device used. Refer to the table below to select a proper way to charge:

	Apple	Android™ QC 3.0
<b>Standard</b>	Used as a normal USB 3.2 Gen 1 port	Used as a normal USB 3.2 Gen 1 port
<b>Quick Charge <sup>(Note 2)</sup></b>	✓ * Provides maximum output power of 10 W	✓ * Provides maximum output power of 18 W
<b>Apple Fast Charge <sup>(Note 3)</sup></b>	✓ * Provides maximum output power of 15 W	✗

✓ : Supports quick-charge, ✗ : Not support quick-charge.

While the system is in S3/S4, the Quick Charge and Apple Fast-Charge modes can only deliver 5V standby power, and the two front USB ports together can provide a total power of up to 10 W and do not support PME Event Wake Up function.

(Note 1) Quick-charging protocols supported: Apple and Samsung® divider charging profile at 5V@2.4A and 5V@2A, Qualcomm® Quick Charge 3.0™ at 3.6V~12V (QC3.0), backward compatible Quick Charge 2.0™ at 5V/9V/12V (QC2.0), Battery Charging Specification v1.2 DCP 5V@1.5A.

(Note 2) The file transfer function is not supported in this mode.

(Note 3) This is the recommended mode when Apple iPhone 8 / iPhone 8 plus / iPhone X is connected.

## Chapter 6 Appendix

### 6-1 Configuring Audio Input and Output

After you install the included motherboard drivers, make sure your Internet connection works properly. The system will automatically install the audio driver from the Microsoft Store. Restart the system after the audio driver is installed.

#### 6-1-1 Configuring 2/4/5.1/7.1-Channel Audio

The motherboard provides five audio jacks on the back panel which support 2/4/5.1/7.1-channel audio. The picture to the right shows the default audio jack assignments. To configure 4/5.1/7.1-channel audio, you have to retask the Line in jack to be Side speaker out through the audio driver.

#### A. Configuring Speakers

Step 1:

Go to the Start menu and click **Realtek Audio Console**. For speaker connection, refer to the instructions in Chapter 1, "Hardware Installation," "Back Panel Connectors."

Step 2:

Connect an audio device to an audio jack. The **Which device did you plug in ?** dialog box appears. Select the device according to the type of device you connect. Then click **OK**.

Step 3:

On the **Speakers** screen, click the **Speaker Configuration** tab. In the **Speaker Configuration** list, select **Stereo**, **Quadraphonic**, **5.1 Speaker**, or **7.1 Speaker** according to the type of speaker configuration you wish to set up. Then the speaker setup is completed.

## B. Configuring Sound Effect

You may configure an audio environment on the **Speakers** tab.

## C. Enabling Smart Headphone Amp

The Smart Headphone Amp feature automatically detects impedance of your head-worn audio device, whether earbuds or high-end headphones to provide optimal audio dynamics. To enable this feature, connect your head-worn audio device to the Line out jack on the rear panel and then go to the **Speaker** page. Enable the **Smart Headphone Amp** feature. The **Headphone Power** list below allows you to manually set the level of headphone volume, preventing the volume from being too high or too low.

### \* Configuring the Headphone

When you connect your headphone to the Line out jack on the back panel or front panel, make sure the default playback device is configured correctly.

Step 1:

Locate the  icon in the notification area and right-click on the icon. Select **Open Sound settings**.

Step 2:

Select **Sound Control Panel**.

**Step 3:**

On the **Playback** tab, make sure your headphone is set as the default playback device. For the device connected to the Line out jack on the back panel, right-click on **Speakers** and select **Set as Default Device**; for the device connected to the Line out jack on the front panel, right-click on **Headphones**.

## 6-1-2 Configuring S/PDIF Out

The S/PDIF Out jack can transmit audio signals to an external decoder for decoding to get the best audio quality.

### 1. Connecting a S/PDIF Out Cable:

Connect a S/PDIF optical cable to an external decoder for transmitting the S/PDIF digital audio signals.

### 2. Configuring S/PDIF Out:

On the **Realtek Digital Output** screen, select the sample rate and bit depth in the **Default Format** section.

### 6-1-3 Stereo Mix

The following steps explain how to enable Stereo Mix (which may be needed when you want to record sound from your computer).

Step 1:

Locate the  icon in the notification area and right-click on the icon. Select **Open Sound settings**.

Step 2:

Select **Sound Control Panel**.

Step 3:

On the **Recording** tab, right-click on **Stereo Mix** item and select **Enable**. Then set it as the default device. (if you do not see **Stereo Mix**, right-click on an empty space and select **Show Disabled Devices**.)

Step 4:

Now you can access the **HD Audio Manager** to configure **Stereo Mix** and use **Voice Recorder** to record the sound.

## 6-1-4 Using the Voice Recorder

After setting up the audio input device, to open the **Voice Recorder**, go to the Start menu and search for **Voice Recorder**.

### A. Recording Audio

1. To begin the recording, click the **Record** icon .
2. To stop the recording, click the **Stop recording** icon .

### B. Playing the Recorded Sound

The recordings will be saved in Documents>Sound Recordings. Voice Recorder records audio in MPEG-4 (.m4a) format. You can play the recording with a digital media player program that supports the audio file format.

## 6-1-5 DTS:X® Ultra

Hear what you have been missing! DTS:X® Ultra technology is designed to enhance your gaming, movies, AR, and VR experiences on headphones and speakers. It delivers an advanced audio solution that renders sounds above, around, and close to you, stepping up your game play to new levels. Now with support for Microsoft Spatial sound. Key features include:

- **Believable 3D audio**  
DTS latest spatial audio rendering that delivers believable 3D audio over headphones and speakers.
- **PC sound gets real**  
DTS:X decoding technology places sound where it would occur naturally in the real world.
- **Hear sound as it was intended**  
Speaker and headphone tuning that preserves the audio experience as it was designed.

### A. Using DTS:X Ultra

Step 1:

After you install the included motherboard drivers, make sure your Internet connection works properly. The system will automatically install DTS: X Ultra from the Microsoft Store. Restart the system after it is installed.

Step 2:

Connect your audio device and select **DTS:X Ultra** on the Start menu. The **Content Mode** main menu allows you to select content modes including Music, Video, and Movies, or you can select specifically tuned sound modes, including Strategy, RPG, and Shooter, to suit different game genres. The **Custom Audio** allows you to create customized audio profiles based on personal preference for later use.

## B. Using DTS Sound Unbound

### Installing DTS Sound Unbound

#### Step 1:

Connect your headphones to the front panel line out jack and make sure your Internet connection works properly. Locate the  icon in the notification area and right-click on the icon. Click on **Spatial Sound** and then select **DTS Sound Unbound**.

#### Step 2:

The system will connect to the Microsoft Store. When the DTS Sound Unbound application appears, click **Install** and follow the on-screen instructions to proceed with the installation.

#### Step 3:

After the DTS Sound Unbound application is installed, click **Launch**. Accept the **End User License Agreement** and restart the system.

#### Step 4:

Select **DTS Sound Unbound** on the Start menu. DTS Sound Unbound allows you to use the DTS Headphone:X and DTS:X features.

## 6-2 Troubleshooting

### 6-2-1 Frequently Asked Questions

To read more FAQs for your motherboard, please go to the **SupportFAQ** page on GIGABYTE's website.

Q: Why is the light of my keyboard/optical mouse still on after the computer shuts down?

A: Some motherboards provide a small amount of standby power after the computer shuts down and that's why the light is still on.

Q: How do I clear the CMOS values?

A: For motherboards that have a Clear CMOS button, press this button to clear the CMOS values (before doing this, please turn off the computer and unplug the power cord). For motherboards that have a Clear CMOS jumper, refer to the instructions in Chapter 1 to short the jumper to clear the CMOS values. If your board doesn't have this jumper/button, refer to the instructions on the motherboard battery in Chapter 1. You can temporarily remove the battery from the battery holder to stop supplying power to the CMOS, which will clear the CMOS values after about one minute.

Q: Why do I still get a weak sound even though I have turned my speaker to the maximum volume?

A: Make sure your speaker is equipped with an internal amplifier. If not, try a speaker with power/amplifier.

## 6-2-2 Troubleshooting Procedure

If you encounter any troubles during system startup, follow the troubleshooting procedure below to solve the problem.

If the procedure above is unable to solve your problem, contact the place of purchase or local dealer for help. Or go to the **Support\Technical Support** page to submit your question. Our customer service staff will reply you as soon as possible.

## 6-3 Debug LED Codes

### Regular Boot

Code	Description
10	PEI Core is started.
11	Pre-memory CPU initialization is started.
12~14	Reserved.
15	Pre-memory North-Bridge initialization is started.
16~18	Reserved.
19	Pre-memory South-Bridge initialization is started.
1A~2A	Reserved.
2B~2F	Memory initialization.
31	Memory installed.
32~36	CPU PEI initialization.
37~3A	IOH PEI initialization.
3B~3E	PCH PEI initialization.
3F~4F	Reserved.
60	DXE Core is started.
61	NVRAM initialization.
62	Installation of the PCH runtime services.
63~67	CPU DXE initialization is started.
68	PCI host bridge initialization is started.
69	IOH DXE initialization.
6A	IOH SMM initialization.
6B~6F	Reserved.
70	PCH DXE initialization.
71	PCH SMM initialization.
72	PCH devices initialization.
73~77	PCH DXE initialization (PCH module specific).
78	ACPI Core initialization.
79	CSM initialization is started.
7A~7F	Reserved for AML use.
80~8F	Reserved for OEM use (OEM DXE initialization codes).
90	Phase transfer to BDS (Boot Device Selection) from DXE.
91	Issue event to connect drivers.

<b>Code</b>	<b>Description</b>
92	PCI Bus initialization is started.
93	PCI Bus hot plug initialization.
94	PCI Bus enumeration for detecting how many resources are requested.
95	Check PCI device requested resources.
96	Assign PCI device resources.
97	Console Output devices connect (ex. Monitor is lighted).
98	Console input devices connect (ex. PS2/USB keyboard/mouse are activated).
99	Super IO initialization.
9A	USB initialization is started.
9B	Issue reset during USB initialization process.
9C	Detect and install all currently connected USB devices.
9D	Activated all currently connected USB devices.
9E~9F	Reserved.
A0	IDE initialization is started.
A1	Issue reset during IDE initialization process.
A2	Detect and install all currently connected IDE devices.
A3	Activated all currently connected IDE devices.
A4	SCSI initialization is started.
A5	Issue reset during SCSI initialization process.
A6	Detect and install all currently connected SCSI devices.
A7	Activated all currently connected SCSI devices.
A8	Verify password if needed.
A9	BIOS Setup is started.
AA	Reserved.
AB	Wait user command in BIOS Setup.
AC	Reserved.
AD	Issue Ready To Boot event for OS Boot.
AE	Boot to Legacy OS.
AF	Exit Boot Services.
B0	Runtime AP installation begins.
B1	Runtime AP installation ends.
B2	Legacy Option ROM initialization.
B3	System reset if needed.

Code	Description
B4	USB device hot plug-in.
B5	PCI device hot plug.
B6	Clean-up of NVRAM.
B7	Reconfigure NVRAM settings.
B8~BF	Reserved.
C0~CF	Reserved.

### S3 Resume

Code	Description
E0	S3 Resume is started (called from DXE IPL).
E1	Fill boot script data for S3 resume.
E2	Initializes VGA for S3 resume.
E3	OS S3 wake vector call.

### Recovery

Code	Description
F0	Recovery mode will be triggered due to invalid firmware volume detection.
F1	Recovery mode will be triggered by user decision.
F2	Recovery is started.
F3	Recovery firmware image is found.
F4	Recovery firmware image is loaded.
F5~F7	Reserved for future AMI progress codes.

### Error

Code	Description
50~55	Memory initialization error occurs.
56	Invalid CPU type or speed.
57	CPU mismatch.
58	CPU self test failed or possible CPU cache error.
59	CPU micro-code is not found or micro-code update is failed.
5A	Internal CPU error.
5B	Reset PPI is failed.
5C~5F	Reserved.
D0	CPU initialization error.
D1	IOH initialization error.

<b>Code</b>	<b>Description</b>
D2	PCH initialization error.
D3	Some of the Architectural Protocols are not available.
D4	PCI resource allocation error. Out of Resources.
D5	No Space for Legacy Option ROM initialization.
D6	No Console Output Devices are found.
D7	No Console Input Devices are found.
D8	It is an invalid password.
D9~DA	Can't load Boot Option.
DB	Flash update is failed.
DC	Reset protocol is failed.
DE~DF	Reserved.
E8	S3 resume is failed.
E9	S3 Resume PPI is not found.
EA	S3 Resume Boot Script is invalid.
EB	S3 OS Wake call is failed.
EC~EF	Reserved.
F8	Recovery PPI is invalid.
F9	Recovery capsule is not found.
FA	Invalid recovery capsule.
FB~FF	Reserved.

# Regulatory Notices

## United States of America, Federal Communications Commission Statement

### Supplier's Declaration of Conformity 47 CFR § 2.1077 Compliance Information

Product Name: **Motherboard**  
Trade Name: **GIGABYTE**  
Model Number: **TRX40 DESIGNARE**

Responsible Party – U.S. Contact Information: **G.B.T. Inc.**  
Address: 17358 Railroad street, City Of Industry, CA91748  
Tel.: 1-626-854-9338  
Internet contact information: <https://www.gigabyte.com>

#### **FCC Compliance Statement:**

This device complies with Part 15 of the FCC Rules, Subpart B, Unintentional Radiators.

Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

The FCC with its action in ET Docket 96-8 has adopted a safety standard for human exposure to radio frequency (RF) electromagnetic energy emitted by FCC certified equipment. The Intel PRO/Wireless 5000 LAN products meet the Human Exposure limits found in OET Bulletin 65, 2001, and ANSI/IEEE C95.1, 1992. Proper operation of this radio according to the instructions found in this manual will result in exposure substantially below the FCC's recommended limits.

The following safety precautions should be observed:

- Do not touch or move antenna while the unit is transmitting or receiving.
- Do not hold any component containing the radio such that the antenna is very close or touching any exposed parts of the body, especially the face or eyes, while transmitting.
- Do not operate the radio or attempt to transmit data unless the antenna is connected; if not, the radio may be damaged.
- Use in specific environments:
  - The use of wireless devices in hazardous locations is limited by the constraints posed by the safety directors of such environments.
  - The use of wireless devices on airplanes is governed by the Federal Aviation Administration (FAA).
  - The use of wireless devices in hospitals is restricted to the limits set forth by each hospital.

#### **Antenna use:**

In order to comply with FCC RF exposure limits, low gain integrated antennas should be located at a minimum distance of 7.9 inches (20 cm) or more from the body of all persons.

#### **Explosive Device Proximity Warning**

Warning: Do not operate a portable transmitter (such as a wireless network device) near unshielded blasting caps or in an explosive environment unless the device has been modified to be qualified for such use.

#### **Antenna Warning**

The wireless adapter is not designed for use with high-gain antennas.

#### **Use On Aircraft Caution**

Caution: Regulations of the FCC and FAA prohibit airborne operation of radio-frequency wireless devices because their signals could interfere with critical aircraft instruments.

#### **Other Wireless Devices**

Safety Notices for Other Devices in the Wireless Network: Refer to the documentation supplied with wireless Ethernet adapters or other devices in the wireless network.

#### **Canada, Canada-Industry Notice:**

This device complies with Industry Canada license-exempt RSS standard(s). Operation is subject to the following two conditions:

- (1) this device may not cause interference, and
- (2) this device must accept any interference, including interference that may cause undesired operation of the device.

Cet appareil est conforme aux normes Canada d'Industrie de RSS permis-exempt. L'utilisation est assujéti aux deux conditions suivantes:

- (1) le dispositif ne doit pas produire de brouillage préjudiciable, et
- (2) ce dispositif doit accepter tout brouillage reçu, y compris un brouillage susceptible de provoquer un fonctionnement indésirable.

**Caution:** When using IEEE 802.11a wireless LAN, this product is restricted to indoor use due to its operation in the 5.15-to 5.25-GHz frequency range. Industry Canada requires this product to be used indoors for the frequency range of 5.15 GHz to 5.25 GHz to reduce the potential for harmful interference to co-channel mobile satellite systems. High power radar is allocated as the primary user of the 5.25-to 5.35-GHz and 5.65 to 5.85-GHz bands. These radar stations can cause interference with and/or damage to this device. The maximum allowed antenna gain for use with this device is 6dBi in order to comply with the E.I.R.P limit for the 5.25-to 5.35 and 5.725 to 5.85 GHz frequency range in point-to-point operation. To comply with RF exposure requirements all antennas should be located at a minimum distance of 20cm, or the minimum separation distance allowed by the module approval, from the body of all persons.

**Attention:** l'utilisation d'un réseau sans fil IEEE802.11a est restreinte à une utilisation en intérieur à cause du fonctionnement dans la bande de fréquence 5.15-5.25 GHz. Industry Canada requiert que ce produit soit utilisé à l'intérieur des bâtiments pour la bande de fréquence 5.15-5.25 GHz afin de réduire les possibilités d'interférences nuisibles aux canaux co-existants des systèmes de transmission satellites. Les radars de puissances ont fait l'objet d'une allocation primaire de fréquences dans les bandes 5.25-5.35 GHz et 5.65-5.85 GHz. Ces stations radar peuvent créer des interférences avec ce produit et/ou lui être nuisible. Le gain d'antenne maximum permise pour une utilisation avec ce produit est de 6 dBi afin d'être conforme aux limites de puissance isotropique rayonnée équivalente (P.I.R.E.) applicable. dans les bandes 5.25-5.35 GHz et 5.725-5.85 GHz en fonctionnement point-à-point. Pour se conformer aux conditions d'exposition de RF toutes les antennes devraient être localisées à une distance minimum de 20 cm, ou la distance de séparation minimum permise par l'approbation du module, du corps de toutes les personnes.

Under Industry Canada regulations, this radio transmitter may only operate using an antenna of a type and maximum (or lesser) gain approved for the transmitter by Industry Canada. To reduce potential radio interference to other users, the antenna type and its gain should be chosen so that the equivalent isotropically radiated power (e.i.r.p.) is not more than that necessary for successful communication.

Conformément à la réglementation d'Industrie Canada, le présent émetteur radio peut fonctionner avec une antenne d'un type et d'un gain maximal (ou inférieur) approuvé pour l'émetteur par Industrie Canada. Dans le but de réduire les risques de brouillage radio électrique à l'intention des autres utilisateurs, il faut choisir le type d'antenne et son gain de sorte que la puissance isotrope rayonnée équivalente (p.i.r.e.) ne dépasse pas l'intensité nécessaire à l'établissement d'une communication satisfaisante.

#### European Union (EU) CE Declaration of Conformity

This device complies with the following directives: Electromagnetic Compatibility Directive 2014/30/EU, Low-voltage Directive 2014/35/EU, Radio Equipment Directive 2014/53/EU, ErP Directive 2009/125/EC, RoHS directive (recast) 2011/65/EU & the 2015/863 Statement.

This product has been tested and found to comply with all essential requirements of the Directives.

**European Union (EU) RoHS (recast) Directive 2011/65/EU & the European Commission Delegated Directive (EU) 2015/863 Statement**  
GIGABYTE products have not intended to add and safe from hazardous substances (Cd, Pb, Hg, Cr+6, PBDE, PBB, DEHP, BBP, DBP and DIBP). The parts and components have been carefully selected to meet RoHS requirement. Moreover, we at GIGABYTE are continuing our efforts to develop products that do not use internationally banned toxic chemicals.

#### European Union (EU) Community Waste Electrical & Electronic Equipment (WEEE) Directive Statement

GIGABYTE will fulfill the national laws as interpreted from the 2012/19/EU WEEE (Waste Electrical and Electronic Equipment) (recast) directive. The WEEE Directive specifies the treatment, collection, recycling and disposal of electric and electronic devices and their components. Under the Directive, used equipment must be marked, collected separately, and disposed of properly.

#### WEEE Symbol Statement

The symbol shown below is on the product or on its packaging, which indicates that this product must not be disposed of with other waste. Instead, the device should be taken to the waste collection centers for activation of the treatment, collection, recycling and disposal procedure.

For more information about where you can drop off your waste equipment for recycling, please contact your local government office, your household waste disposal service or where you purchased the product for details of environmentally safe recycling.

#### End of Life Directives-Recycling

The symbol shown below is on the product or on its packaging, which indicates that this product must not be disposed of with other waste. Instead, the device should be taken to the waste collection centers for activation of the treatment, collection, recycling and disposal procedure.

#### Déclaration de Conformité aux Directives de l'Union européenne (UE)

Cet appareil portant la marque CE est conforme aux directives de l'UE suivantes: directive Compatibilité Electromagnétique 2014/30/UE, directive Basse Tension 2014/35/UE, directive équipements radioélectriques 2014/53/UE, la directive RoHS II 2011/65/UE & la déclaration 2015/863. La conformité à ces directives est évaluée sur la base des normes européennes harmonisées applicables.

#### European Union (EU) CE-Konformitätserklärung

Dieses Produkte mit CE-Kennzeichnung erfüllen folgenden EU-Richtlinien: EMV-Richtlinie 2014/30/EU, Niederspannungsrichtlinie 2014/35/EU, Funkanlagen Richtlinie 2014/53/EU, RoHS-Richtlinie 2011/65/EU erfüllt und die 2015/863 Erklärung.

Die Konformität mit diesen Richtlinien wird unter Verwendung der entsprechenden Standards zur Europäischen Normierung beurteilt.

#### CE declaração de conformidade

Este produto com a marcação CE estão em conformidade com das seguintes Diretivas UE: Diretiva Baixa Tensão 2014/35/EU; Diretiva CEM 2014/30/EU; Diretiva RSP 2011/65/UE e a declaração 2015/863.

A conformidade com estas diretivas é verificada utilizando as normas europeias harmonizadas.

#### CE Declaración de conformidad

Este producto que llevan la marca CE cumplen con las siguientes Directivas de la Unión Europea: Directiva EMC 2014/30/EU, Directiva de bajo voltaje 2014/35/EU, Directiva de equipamientos de radio 2014/53/EU, Directiva RoHS 2011/65/UE y la Declaración 2015/863.

El cumplimiento de estas directivas se evalúa mediante las normas europeas armonizadas.

#### CE Dichiarazione di conformità

I prodotti con il marchio CE sono conformi con una o più delle seguenti Direttive UE, come applicabile: Direttiva EMC 2014/30/UE, Direttiva sulla bassa tensione 2014/35/UE, Direttiva di apparecchiature radio 2014/53/UE, Direttiva RoHS 2011/65/UE e Dichiarazione 2015/863.

La conformità con tali direttive viene valutata utilizzando gli Standard europei armonizzati applicabili.

#### Deklaracja zgodności UE Unii Europejskiej

Urządzenie jest zgodne z następującymi dyrektywami: Dyrektywa kompatybilności elektromagnetycznej 2014/30/UE, Dyrektywa niskonapięciowej 2014/35/UE, Dyrektywa urządzeń radiowych 2014/53/UE, Dyrektywa RoHS 2011/65/UE i dyrektywa 2015/863.

Niniejsze urządzenie zostało poddane testom i stwierdzono jego zgodność z wymaganiami dyrektywy.

#### ES Prohlášení o shodě

Toto zařízení splňuje požadavky Směrnice o Elektromagnetické kompatibilitě 2014/30/UE, Směrnice o Nízkém napětí 2014/35/UE, Směrnice o rádiových zařízeních 2014/53/UE, Směrnice RoHS 2011/65/UE a 2015/863.

Tento produkt byl testován a bylo shledáno, že splňuje všechny základní požadavky směrnice.

#### EK megfeleléségi nyilatkozata

A termék megfelelnek az alábbi irányelvek és szabványok követelményeinek, azok a kiállítási időpontjában érvényes, aktuális változatában: EMC irányelv 2014/30/UE, Kíszfeszültségű villamos berendezésekre vonatkozó irányelv 2014/35/UE, rádióberendezések irányelv 2014/53/UE, RoHS irányelv 2011/65/UE és 2015/863.

#### Δήλωση συμμόρφωσης EE

Είναι σε συμμόρφωση με τις διατάξεις των παρακάτω Οδηγιών της Ευρωπαϊκής Κοινότητας: Οδηγία 2014/30/ΕΕ σχετικά με την ηλεκτρομαγνητική συμβατότητα, Οδηγία χαμηλής τάσης 2014/35/ΕΕ, Οδηγία 2014/53/ΕΕ σε ραδιοεξοπλισμό, Οδηγία RoHS 2011/65/ΕΕ και 2015/863.

Η συμμόρφωση με αυτές τις οδηγίες αξιολογείται χρησιμοποιώντας τα ισχύοντα εναρμονισμένα ευρωπαϊκά πρότυπα.

**European Community Radio Equipment Directive Compliance Statement:**

This equipment complies with all the requirements and other relevant provisions of Radio Equipment Directive 2014/53/EU. This equipment is suitable for home and office use in all the European Community Member States and EFTA Member States. The low band 5.15-5.35 GHz is for indoor use only.
