# GIGABYTE<sup>™</sup> R163-SG2-AAC1

4th Gen Intel® Xeon® Scalable - 1U UP Gen5 GPU 12-Bay Gen5 NVMe/SATA/SAS4

User Manual

Rev. 1.0

# **Copyright**

© 2023 Giga Computing Technology CO., LTD. All rights reserved. The trademarks mentioned in this manual are legally registered to their respective owners.

### **Disclaimer**

Information in this manual is protected by copyright laws and is the property of Giga Computing. Changes to the specifications and features in this manual may be made by Giga Computing without prior notice. No part of this manual may be reproduced, copied, translated, transmitted, or published in any form or by any means without Giga Computing's prior written permission.

### **Documentation Classifications**

In order to assist in the use of this product, Giga Computing provides the following types of documentation:

- User Manual: detailed information & steps about the installation, configuration and use of this product (e.g. motherboard, server barebones), covering hardware and BIOS.
- User Guide: detailed information about the installation & use of an add-on hardware or software component (e.g. BMC firmware, rail-kit) compatible with this product.
- Quick Installation Guide: a short guide with visual diagrams that you can reference easily for installation purposes of this product (e.g. motherboard, server barebones).

Please see the support section of the online product page to check the current availability of these documents.

### For More Information

For related product specifications, the latest firmware and software, and other information please visit our website at http://www.gigabyte.com/Enterprise

For GIGABYTE distributors and resellers, additional sales & marketing materials are available from our reseller portal: http://reseller.b2b.gigabyte.com

For further technical assistance, please contact your GIGABYTE representative or visit https://esupport.gigabyte.com/ to create a new support ticket

For any general sales or marketing enquiries, you may also message GIGABYTE server directly by email: server.grp@gigabyte.com

# Conventions

The following conventions are used in this user's guide:

L.	<b>NOTE!</b> Gives bits and pieces of additional information related to the current topic.
	CAUTION! Gives precautionary measures to avoid possible hardware or software problems.
	WARNING! Alerts you to any damage that might result from doing or not doing specific actions.

# **Server Warnings and Cautions**

Before installing a server, be sure that you understand the following warnings and cautions.

# 

#### To reduce the risk of electric shock or damage to the equipment:

- Do not disable the power cord grounding plug. The grounding plug is an important safety feature.
- Plug the power cord into a grounded (earthed) electrical outlet that is easily accessible at all times.
- Unplug all the power cords from the power supplies to disconnect power to the equipment.

- Shock Hazard! Disconnect all power supply cords before servicing.
- Do not route the power cord where it can be walked on or pinched by items placed against it. Pay particular attention to the plug, electrical outlet, and the point where the cord extends from the server.

# 

To reduce the risk of personal injury from hot surfaces, allow the drives and the internal system components to cool before touching them.

This server is equipped with high speed fans. Keep away from hazardous moving fan blades during servicing.

# 

This equipment is intended to be used in Restrict Access Location. The access can only be gained by Skilled person. Only authorized by well trained professional person can access the restrict access location.

# 

- Do not operate the server for long periods with the access panel open or removed. Operating the server in this manner results in improper airflow and improper cooling that can lead to thermal damage.
- Danger of explosion if battery is incorrectly replaced.
- Replace only with the same or equivalent type recommended by the manufacturer.
- Dispose of used batteries according to the manufacturer's instructions.

# CAUTION!

Risk of explosion if battery is replaced incorrectly or with an incorrect type. Replace the battery only with the same or equivalent type recommended by the manufacturer. Dispose of used batteries according to the manufacturer's instructions.

# Electrostatic Discharge (ESD)

ESD CAN DAMAGE DRIVES, BOARDS, AND OTHER PARTS. WE RECOMMEND THAT YOU PERFORM ALL PROCEDURES AT AN ESD WORKSTATION. IF ONE IS NOT AVAILABLE, PROVIDE SOME ESD PROTECTION BY WEARING AN ANTI-STATIC WRIST STRAP AT-TACHED TO CHASSIS GROUND -- ANY UNPAINTED METAL SURFACE -- ON YOUR SERVER WHEN HANDLING PARTS.

Always handle boards carefully. They can be extremely sensitive to ESD. Hold boards only by their edges without any component and pin touching. After removing a board from its protective wrapper or from the system, place the board component side up on a grounded, static free surface. Use a conductive foam pad if available but not the board wrapper. Do not slide board over any surface.

**System power on/off:** To remove power from system, you must remove the system from rack. Make sure the system is removed from the rack before opening the chassis, adding, or removing any non hot-plug components.

Hazardous conditions, devices and cables: Hazardous electrical conditions may be present on power, telephone, and communication cables. Turn off the system and disconnect the cables attached to the system before servicing it. Otherwise, personal injury or equipment damage can result.

**Electrostatic discharge (ESD) and ESD protection:** ESD can damage drives, boards, and other parts. We recommend that you perform all procedures in this chapter only at an ESD workstation. If one is not available, provide some ESD protection by wearing an antistatic wrist strap attached to chassis ground (any unpainted metal surface on the server) when handling parts.

**ESD** and handling boards: Always handle boards carefully. They can be extremely sensitive to electrostatic discharge (ESD). Hold boards only by their edges. After removing a board from its protective wrapper or from the system, place the board component side up on a grounded, static free surface. Use a conductive foam pad if available but not the board wrapper. Do not slide board over any surface.

**Installing or removing jumpers:** A jumper is a small plastic encased conductor that slips over two jumper pins. Some jumpers have a small tab on top that can be gripped with fingertips or with a pair of fine needle nosed pliers. If the jumpers do not have such a tab, take care when using needle nosed pliers to remove or install a jumper; grip the narrow sides of the jumper with the pliers, never the wide sides. Gripping the wide sides can dam-age the contacts inside the jumper, causing intermittent problems with the function con-trolled by that jumper. Take care to grip with, but not squeeze, the pliers or other tool used to remove a jumper, or the pins on the board may bend or break.

# Chapter 1 Hardware Installation

# 1-1 Installation Precautions

The motherboard/system contain numerous delicate electronic circuits and components which can become damaged as a result of electrostatic discharge (ESD). Prior to installation, carefully read the service guide and follow these procedures:

- Prior to installation, do not remove or break motherboard S/N (Serial Number) sticker or warranty sticker provided by your dealer. These stickers are required for warranty validation.
- Always remove the AC power by unplugging the power cord from the power outlet before installing or removing the motherboard or other hardware components.
- When connecting hardware components to the internal connectors on the motherboard, make sure they are connected tightly and securely.
- When handling the motherboard, avoid touching any metal leads or connectors.
- It is best to wear an electrostatic discharge (ESD) wrist strap when handling electronic components such as a motherboard, CPU or memory. If you do not have an ESD wrist strap, keep your hands dry and first touch a metal object to eliminate static electricity.
- Prior to installing the motherboard, please have it on top of an antistatic pad or within an electrostatic shielding container.
- Before unplugging the power supply cable from the motherboard, make sure the power supply has been turned off.
- Before turning on the power, make sure the power supply voltage has been set according to the local voltage standard.
- Before using the product, please verify that all cables and power connectors of your hardware components are connected.
- To prevent damage to the motherboard, do not allow screws to come in contact with the motherboard circuit or its components.
- Make sure there are no leftover screws or metal components placed on the motherboard or within the computer casing.
- Do not place the computer system on an uneven surface.
- · Do not place the computer system in a high-temperature environment.
- Turning on the computer power during the installation process can lead to damage to system components as well as physical harm to the user.
- If you are uncertain about any installation steps or have a problem related to the use of the product, please consult a certified computer technician.

# 1-2 Product Specifications

#### NOTE:

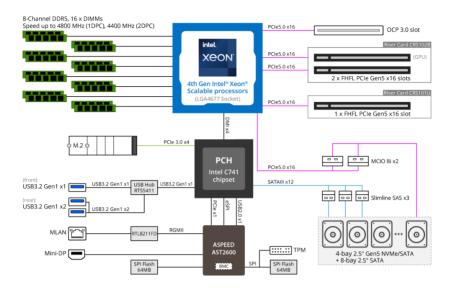

We reserve the right to make any changes to the product specifications and product-related information without prior notice.

#### NOTE!

- 1. EC FW is broken or not exited result in Microchip CEC1702 cannot load EC FW for authentication.
- 2 (1) Authentication fail include below scenarios Configuration table is missing or modified Public key is missing or modified Protected area or signature is modified Flash empty
- If active flash is still authentication failed after recovery sequence, Microchip CEC1702 stop the process and showing LED behavior.
- 4. If backup flash authentication is failed cause by configuration table, public key or protected area is broken. Microchip CEC1702 stop the process and showing LED behavior.
- Front panel LED is controlled by BMC or Microchip CEC1702. Once Microchip CEC1702 is working(Auth or recovery), the front panel LED is controlled by Microchip CEC1702 and vice versa.

# 2-4 Rear System LAN LEDs

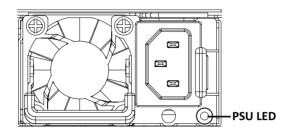

No.	Name	Color	Status	Description
	1015	Yellow	On	1 Gbps data rate
1.	1GbE Speed LED	Green	On	100 Mbps data rate
		N/A	Off	10 Mbps data rate
	1GbE Link/ Activity	0	On	Link between system and
		Green		network or no access
2.			Blink	Data transmission or receiving is occurring
	LED	N/A	Off	No data transmission or
				receiving is occurring

# 2-5 Power Supply Unit (PSU) LED

#### NOTE!

The power supply may be vary based on the system configuration.

State	Description
OFF	No AC power to all power supplies
1Hz Green Blinking	AC present / only standby on / Cold redundant mode
2Hz Green Blinking	Power supply firmware updating mode
Amber	AC cord unplugged or AC power lost; with a second power supply in parallel still with AC input power
Amber	Power supply critical event causing shut down: failure, OCP, OVP, fan failure and UVP
1Hz Amber Blinking	Power supply warning events where the power supply continues to operate: high temp, high power, high current and slow fan

# 2-6 Hard Disk Drive LEDs

RAIE	LED #1	Locate	HDD Fault	Rebuilding	HDD Access	HDD Present (No Access)	
	Disk LED (LED	Green	ON(*1)	OFF		BLINK (*2)	OFF
No RAID	on Back Panel)	Amber	OFF	OFF		OFF	OFF
configuration (via PCH, HBA)	Removed HDD Slot (LED on	Green	ON(*1)	OFF			
	Back Panel)	Amber	OFF	OFF			
RAID		Green	ON	OFF		BLINK (*2)	OFF
configuration (via HW RAID	Disk LED	Amber	OFF	ON	(Low Speed: 2 Hz)	OFF	OFF
Card or SW	Removed	Green	ON(*1)	OFF	(*3)		
RAID Card)	HDD Slot	Amber	OFF	ON	(*3)		

LED #2	HDD Present	No HDD			
Green	ON	OFF			

NOTE:

\*1: Depends on HBA/Utility Spec.

\*2: Blink cycle depends on HDD's activity signal.

\*3: If HDD is pulled out during rebuilding, the disk status of this HDD is regarded as faulty.

# Chapter 3 System Hardware Installation

#### **Pre-installation Instructions**

Computer components and electronic circuit boards can be damaged by electrostatic discharge. Working on computers that are still connected to a power supply can be extremely dangerous. Follow the simple guidelines below to avoid damage to your computer or injury to yourself.

- Always disconnect the computer from the power outlet whenever you are working inside the computer case.
- If possible, wear a grounded wrist strap when you are working inside the computer case. Alternatively, discharge any static electricity by touching the bare metal system of the computer case, or the bare metal body of any other grounded appliance.
- Hold electronic circuit boards by the edges only. Do not touch the components on the board unless it is necessary to do so. Do not flex or stress the circuit board.
- Leave all components inside the static-proof packaging until you are ready to use the component
  for the installation.

# 3-1 Removing Chassis Cover

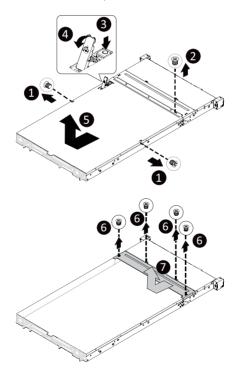

Before you remove or install the system cover

· Make sure the system is not turned on or connected to AC power.

#### Follow these instructions to remove the chassis cover:

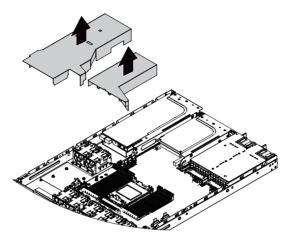

- Remove the screws on both sides of the back chassis cover. (Note: For safe shipping, installation screws are added and should be removed before deployment/putting it in the server cabinet.)
- 2. Remove the screw securing the back chassis cover.
- 3. Push button to unlock the handle.
- 4. Pull the grip handle to open the panel cover.
- Slide the back chassis cover towards the rear and remove the chassis cover in the direction indicated.
- 6. Remove the screw securing the middle chassis cover.
- 7. Slide the middle chassis cover towards the rear and remove the chassis cover in the direction indicated.
- 8. To reinstall the chassis cover reverse steps 2-7.

# 3-2 Removing and Installing the Fan Duct

#### Follow these instructions to remove/install the fan duct:

- 1. Lift up to remove the fan duct
- 2. To install the fan duct, align the fan duct with the guiding groove. Push down the fan duct into chassis until its firmly seat.

# 3-3 Removing and installing the Heat Sink

Read the following guidelines before you begin to remove/install the heat sink:

- Always turn off the computer and unplug the power cord from the power outlet before installing the heat sink to prevent hardware damage.
- Unplug all cables from the power outlets.
- · Disconnect all telecommunication cables from their ports.
- Place the system unit on a flat and stable surface.
- · Open the system according to the instructions.

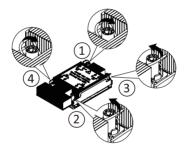

#### WARNING!

Failure to turn off the server before you start installing components may cause serious damage. Do not attempt the procedures described in the following sections unless you are a qualified service technician.

#### Follow these instructions to remove/install the heat sink:

- 1. Loosen the captive screws securing the heat sink in place in reverse order  $(4 \rightarrow 3 \rightarrow 2 \rightarrow 1)$ .
- 2. Move the rotating wires into the unlatch position.
- 3. Lift and remove the heat sink from the system.
- To reinstall the heat sink reverse steps 1-3 while ensuring that you tighten the captive screws in sequential order (1→2→3→4).

When installing the heat sink to CPU, use T30-Lobe driver to tighten 4 captive nuts in sequence as 1-4. The screw tightening torque: 8  $\pm$  0.5 kgf-cm.

To ensure the system operates properly, make sure the heatsink is seated on the processor firmly.

# 3-4 Installing the CPU

Read the following guidelines before you begin to install the CPU:

- Make sure that the motherboard supports the CPU.
- Always turn off the computer and unplug the power cord from the power outlet before installing the CPU to prevent hardware damage.
- Unplug all cables from the power outlets.
- · Disconnect all telecommunication cables from their ports.
- · Place the system unit on a flat and stable surface.
- Open the system according to the instructions.

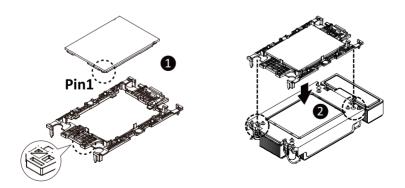

#### WARNING!

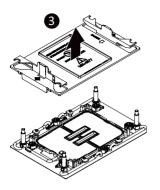

Failure to properly turn off the server before you start installing components may cause serious damage. Do not attempt the procedures described in the following sections unless you are a qualified service technician.

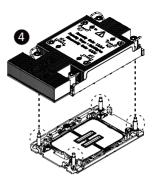

#### Follow these instructions to Install the CPU:

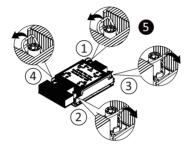

- Align and install the processor on the carrier.
   NOTE: Apply thermal compound evenly on the top of the CPU. Remove the protective cover from the underside of the heat sink.
- 2. Carefully flip the heat sink cover. Then install the carrier assembly on the bottom of the heat sink and make sure the gold arrow is located in the correct direction.
- Remove the CPU cover.
   NOTE: Save the CPU cover in the event that you need to remove the CPU from the socket.
- 4. Align the heat sink with the CPU socket by the guide pins and make sure the gold arrow is located in the correct direction. Then place the heat sink onto the top of the CPU socket.
- Position the rotating wires into the latch position. Tighten the screws in sequential order (1→2→3→4).

**NOTE:** When dissembling the heat sink, loosen the screws in reverse order  $(4 \rightarrow 3 \rightarrow 2 \rightarrow 1)$  and then move the rotating wires into the unlatch position.

#### **Carrier Types used for Package Types**

Package Type	Xeon <sup>®</sup> SP XCC	Xeon <sup>®</sup> SP MCC	Xeon <sup>®</sup> SP+HBM
Carrier Code	E1A	E1B	E1C

NOTE!

- The carrier code is marked on each carrier and matches a code laser marked on to the IHS(Integrated Heat Spreader) to ensure the right parts are used together
- When installing the heat sink to CPU, use T30-Lobe driver to tighten 4 captive nuts in sequence as 1-4.
- The screw tightening torque: 8 ± 0.5 kgf-cm.

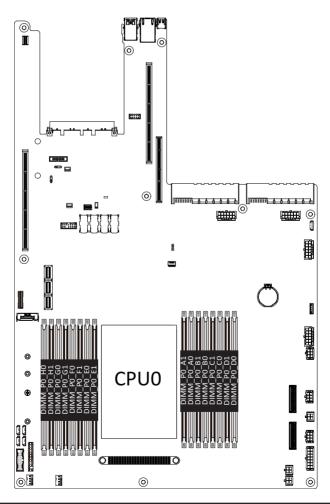

# Installing the Memory

Read the following guidelines before you begin to install the memory:

- Make sure that the motherboard supports the memory. It is recommended that memory of the same capacity, brand, speed, and chips be used.
- Always turn off the computer and unplug the power cord from the power outlet before installing the memory to prevent hardware damage.
- Memory modules have a foolproof design. A memory module can be installed in only one direction. If you are unable to insert the memory, switch the direction.

# 3-5-1 Eight Channel Memory Configuration

This motherboard provides 16 DDR5 memory slots and supports 8-Channel Technology. After the memory is installed, the BIOS will automatically detect the specifications and capacity of the memory.

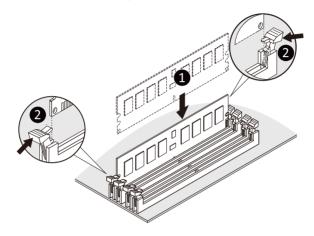

### 3-5-2 Installing the Memory

Before installing a memory module, make sure to turn off the computer and unplug the power cord from the power outlet to prevent damage to the memory module. Be sure to install DDR5 DIMMs on this motherboard.

#### Follow these instructions to install the Memory:

- 1. Insert the DIMM memory module vertically into the DIMM slot, and push it down.
- 2. Close the plastic clip at both edges of the DIMM slots to lock the DIMM module.
- 3. Reverse the installation steps when you want to remove the DIMM module.

#### 3-5-3 DIMM Population Table

Туре	Ranks Per DIMM and Data Width	DIMM Cap	acity (GB)	Speed (MT/s); Voltage (V); DIMM per Channel (DPC) 1DPCN <sup>1</sup> 2DPC				
		16Gb	24Gb <sup>2</sup>	24Gb <sup>2</sup> 1.1V				
	SRx8 (RC D)	16GB	24GB					
	SRx4 (RC C)	32GB	48GB	]				
RDIMM	SRx4 (RC F) 9x4	32GB	NA	1				
KUIIVIIVI	DRx8 (RC E)	32GB	48GB	1				
	DRx4 (RC A)	64GB	96GB	4800	4400			
	DRx4 (RC B) 9x4	64GB	NA	]				
	(4R/8R)x4	2H-128GB						
RDIMM 3DS	(RCA)	4H-256GB	NA					

NOTE:

1.1DPC applies to 1SPC or 2SPC implementations (SPC - Sockets Per Channel)

2. 24Gb XCC only w/ limited configs: 1DPC all DIMM types, 2DPC 96GB only. Only 8 and 16 DIMM configs, no fallbacks.

## 3-5-4 Processor and Memory Module Matrix Table

Memory	CPU0 H0 H1 G0 G1 F0 F1 E0 E1 A1 A0 B1 B0 C1 C0 D1 D0

1 DIMM										v						
2 DIMM			v							v						
4 DIMM			v				v			v				v		
6 DIMM			v		v		v			v				v		v
8 DIMM	v		v		v		v			v		v		v		v
12 DIMM	v		v	v	v		v	v	v	v		v	v	v		v
16 DIMM	v	v	v	v	v	v	v	v	v	v	v	v	v	v	v	v

# 3-6 Installing the GPU Card

Before you install/remove the GPU card:

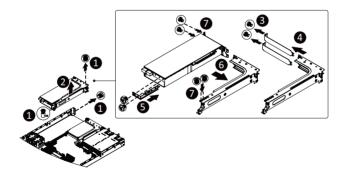

- Voltages can be present within the server whenever an AC power source is connected. This
  voltage is present even when the main power switch is in the off position. Ensure that the
  system is powered down and all power sources have been disconnected from the server prior
  to installing a GPU card. Make sure the system is not turned on or connected to AC power.
- Failure to observe these warnings could result in personal injury or damage to the equipment.

• The GPU cards need to be purchased.

#### Follow these instructions to install the GPU card:

- 1. Remove the screws and loosen the thumbscrew securing the riser bracket.
- 2. Lift up the riser bracket out of system.
- 3. Remove the two screws securing the GPU card slot covers in place.
- 4. Remove the GPU card slot covers.
- 5. Attach the support bracket to the side of GPU Card and secure it with two screws.
- 6. Insert the GPU card into the selected slot. Make sure the GPU card is properly seated.
- 7. Install the screws to secure the GPU card in place.
- 8. Reverse the previous steps to remove the GPU card.

# 3-7 Installing the PCI Expansion Card

Voltages can be present within the server whenever an AC power source is connected. This voltage is present even when the main power switch is in the off position. Ensure that the system is powered-down and all power sources have been disconnected from the server prior to installing a PCIe card.

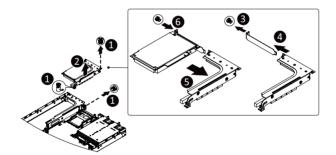

· Failure to observe these warnings could result in personal injury or damage to equipment.

The PCIe riser assembly does not include a riser card or any cabling as standard. To install a PCIe card, a riser card must be installed.

#### Follow these instructions for a PCI Expansion card:

- 1. Remove the screws and loosen the thumbscrew securing the riser bracket.
- 2. Lift up the riser bracket out of system.
- 3. Remove the screw securing the slot cover from the riser bracket.
- 4. Remove the slot cover from the riser bracket.
- Orient the PCIe card with the riser guide slot and push in the direction of the arrow until the PCIe card sits in the PCIe card connector.
- 6. Secure the PCIe card with the screw.
- 7. Reverse the previous steps to install the riser bracket.

# 3-8 Installing the Mezzanine Card

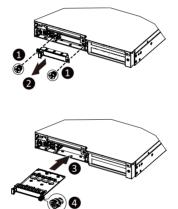

# 3-8-1 OCP 3.0

Use of the following type of OCP 3.0 NIC is recommended:

- OCP 3.0 SFF with Pull Tab
  - OCP 3.0 SFF with Ejector Latch

#### Follow these instructions to install an OCP 3.0 mezzanine card:

- 1. Remove the two screws securing the mezzanine card slot cover.
- 2. Remove the slot cover from the system.
- 3. Insert the OCP 3.0 mezzanine card into the card slot ensuring that the card is firmly connected to the connector on the motherboard.
- 4. Tighten the thumbnail screw to secure the OCP 3.0 mezzanine card in place.
- 5. Reverse the previous steps to replace the OCP 3.0 mezzanine card.

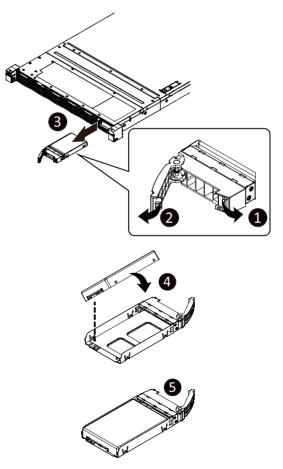

# 3-9 Installing the Hard Disk Drive

Read the following guidelines before you begin to install the HDD:

- Take note of the drive tray orientation before sliding it out.
- The tray will not fit back into the bay if inserted incorrectly.
- Make sure that the HDD is connected to the HDD connector on the backplane.

#### Follow these instructions to install a 2.5" HDD:

- 1. Press the release button.
- 2. Extend the locking lever.
- 3. Pull the locking lever in the direction indicated to remove the HDD tray.
- 4. Align the hard disk drive with the positioning stud on the HDD tray.
- 5. Slide the hard disk drive into the HDD tray.
- 6. Reinsert the HDD tray into the slot and close the locking lever.

# 3-10 Installing the M.2 Device and Heat Sink

#### CAUTION

The position of the stand-off screw will depend on the size of the M.2 device. The stand-off screw is pre-installed for 22110 cards as standard. Refer to the size of the M.2 device and change the position of the stand-off screw accordingly.

#### WARNING:

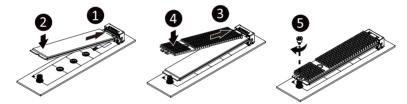

Please ensure a heatsink is attached to any M.2 device installed into the system. Installing an M.2 device without any heatsink may result in the system overheating or system performance being throttled.

To install/remove the M.2 module and Heatsink use a No. 1 Phillips-head screwdriver with a screw torque of 1.5  $\pm$  0.2 kgf\*cm

#### Follow these instructions to install the M.2 device and heat sink:

- 1. Insert the M.2 device into the M.2 connector.
- 2. Press down on the M.2 device.
- 3. Install the thermal pad of the M.2 device to the M.2 device.
- 4. Press down on the thermal pad.
- 5. Secure the M.2 device and its thermal pad to the motherboard with a single screw.
- 6. Reverse steps 1-2 to remove the M.2 device.

# 3-11 Replacing the Fan Assembly

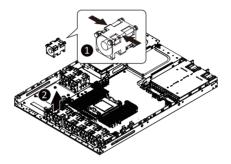

Voltages can be present within the server whenever an AC power source is connected. This voltage is present even when the main power switch is in the off position. Ensure that the system is powered-down and all power sources have been disconnected from the server prior to replacing a system fan.

· Failure to observe these warnings could result in personal injury or damage to equipment.

#### Follow these instructions to replace the fan assembly:

- 1. Lift up the fan assembly from the chassis.
- 2. Reverse the previous steps to install the replacement fan assembly.

## 3-12 Replacing the Power Supply

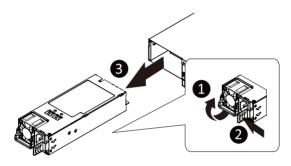

### CAUTION!

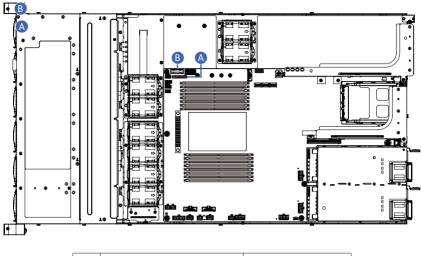

• In order to reduce the risk of injury from electric shock, disconnect AC power from the power supply before removing the power supply from the system

#### Follow these instructions to replace the power supply:

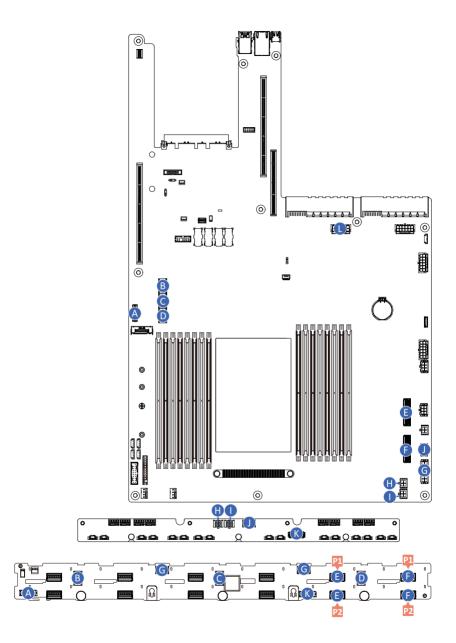

- 1. Flip and then grasp the power supply handle.
- 2. Press the retaining clip on the top side of the power supply in the direction indicated.
- 3. Pull out the power supply using the handle.
- 4. Insert the replacement power supply firmly into the chassis. Connect the AC power cord to the replacement power supply.

# Chapter 5 BIOS Setup

BIOS (Basic Input and Output System) records hardware parameters of the system in the EFI on the motherboard. Its major functions include conducting the Power-On Self-Test (POST) during system startup, saving system parameters, loading the operating system etc. The BIOS includes a BIOS Setup program that allows the user to modify basic system configuration settings or to activate certain system features. When the power is turned off, the battery on the motherboard supplies the necessary power to the CMOS to keep the configuration values in the CMOS.

To access the BIOS Setup program, press the <DEL> key during the POST when the power is turned on.

- BIOS flashing is potentially risky, if you do not encounter any problems when using the current BIOS version, it is recommended that you don't flash the BIOS. To flash the BIOS, do it with caution. Inadequate BIOS flashing may result in system malfunction.
- It is recommended that you not alter the default settings (unless you need to) to prevent system instability or other unexpected results. Inadequately altering the settings may result in system's failure to boot. If this occurs, try to clear the CMOS values and reset the board to default values. (Refer to the Exit section in this chapter or introductions of the battery/clearing CMOS jumper in Chapter 4 for how to clear the CMOS values.)

#### **BIOS Setup Program Function Keys**

	•
<←><→>	Move the selection bar to select the screen
<↑><↓>	Move the selection bar to select an item
<+>	Increase the numeric value or make changes
<->	Decrease the numeric value or make changes
<enter></enter>	Execute command or enter the submenu
<esc></esc>	Main Menu: Exit the BIOS Setup program
	Submenus: Exit current submenu
<f1></f1>	Show descriptions of general help
<f3></f3>	Restore the previous BIOS settings for the current submenus
<f9></f9>	Load the Optimized BIOS default settings for the current submenus
<f10></f10>	Save all the changes and exit the BIOS Setup program

#### Main

This setup page includes all the items of the standard compatible BIOS.

#### Advanced

This setup page includes all the items of AMI BIOS special enhanced features.

(ex: Auto detect fan and temperature status, automatically configure hard disk parameters.)

### Chipset

This setup page includes all the submenu options for configuring the functions of the Platform Controller Hub.

#### Server Management

Server additional features enabled/disabled setup menus.

### Security

Change, set, or disable supervisor and user password. Configuration supervisor password allows you to restrict access to the system and BIOS Setup.

A supervisor password allows you to make changes in BIOS Setup.

A user password only allows you to view the BIOS settings but not to make changes.

### Boot

This setup page provides items for configuration of the boot sequence.

### Save & Exit

Save all the changes made in the BIOS Setup program to the CMOS and exit BIOS Setup. (Pressing <F10> can also carry out this task.)

Abandon all changes and the previous settings remain in effect. Pressing <Y> to the confirmation message will exit BIOS Setup. (Pressing <Esc> can also carry out this task.)

## 5-1 The Main Menu

Once you enter the BIOS Setup program, the Main Menu (as shown below) appears on the screen. Use arrow keys to move among the items and press <Enter> to accept or enter other sub-menu.

#### Main Menu Help

The on-screen description of a highlighted setup option is displayed on the bottom line of the Main Menu.

#### Submenu Help

While in a submenu, press <F1> to display a help screen (General Help) of function keys available for the menu. Press <Esc> to exit the help screen. Help for each item is in the Item Help block on the right side of the submenu.

When the system is not stable as usual, select the **Restore Defaults** item to set your system to its defaults.

The BIOS Setup menus described in this chapter are for reference only and may differ by BIOS version.

## 5-2-3 SIO Configuration

Aptio Setup – AMI Advanced	
AMI SID Driver Version : A5.18.00 Super ID Chip Logical Device(s) Configuration > [=Active*] Serial Port WARNING: Logical Devices state on the left side of the control, reflects the current Logical Device state. Changes made during Setup Session will be shown after you restart the system.	View and Set Basic properties of the SIO Logical device. Like IO Base, IRQ Range, DMA Channel and Device Mode.
	<pre>++: Select Screen 11: Select Item K/M: Scroll Help Area Up/Down. Enter: Select +/-: Change Opt. F1: General Help F3: Previous Values F9: Optimized Defaults F10: Save &amp; Exit ESC: Exit</pre>
Version 2.22.1287 Copyright (C) 2023 AM	I

Parameter	Description
AMI SIO Driver Version	Displays the AMI SIO driver version information.
Super IO Chip Logical Device(s) Configuration	
[*Active*] Serial Port	<ul> <li>Press [Enter] to configure advanced items.</li> <li>Use This Device <ul> <li>When set to Enabled allows you to configure the serial port settings. When set to Disabled, displays no configuration for the serial port.</li> <li>Options available: Enabled, Disabled. Default setting is Enabled.</li> </ul> </li> <li>Logical Device Settings/Current: <ul> <li>Displays the serial port base I/O address and IRQ.</li> </ul> </li> <li>Possible: <ul> <li>Configures the serial port base I/O address and IRQ.</li> <li>Use Automatic Settings</li> <li>IO=3F8h; IRQ=4; DMA;</li> <li>IO=3F8h; IRQ=4; DMA;</li> <li>IO=2F8h; IRQ=4; DMA;</li> <li>IO=2E8h; IRQ=4; DMA;</li> <li>IO=2E8h; IRQ=4; DMA;</li> <li>Default setting is Use Automatic Settings.</li> </ul> </li> </ul>

### 5-2-4 PCI Subsystem Settings

Advanced	Aptio Setup – AMI	
PCI Bus Driver Version SLOT4 1/0 ROM SLOT4 Lanes SLOT4 Max Link Speed SLOT2 I/0 ROM SLOT2 Lanes SLOT2 Lanes SLOT2 Max Link Speed	A5.01.29 [Enabled] [Auto] [Auto] [Auto] [Auto] [Auto]	▲ Enable/Disable SLOT4 I/O ROM
SLOT1 I/O ROM SLOT1 Lanes SLOT1 Max Link Speed	[Enabled] [Auto] [Auto]	
SLOT3 I/O ROM	[Enabled]	++: Select Screen
SLOT3 Lanes	[Auto]	↑↓: Select Item
SLOT3 Max Link Speed	(Auto)	K/M: Scroll Help Area Up/Down.
M2M I/O ROM	[Enabled]	Enter: Select
M2M Lanes	[Auto]	+/-: Change Opt.
M2M Max Link Speed	[Auto]	F1: General Help F3: Previous Values F9: Optimized Defaults
PCI Devices Common Settings:		F10: Save & Exit
Above 4G Decoding	[Enabled]	ESC: Exit
SR-IOV Support	[Enabled]	<b>V</b>

Parameter	Description
PCI Bus Driver Version	Displays the PCI Bus Driver version information.
SLOT# I/O ROM <sup>(Note1)</sup>	When enabled, this setting will initialize the device expansion ROM for the related PCI-E slot. Options available: Enabled, Disabled. Default setting is <b>Enabled</b> .
SLOT# Lanes <sup>(Note1)</sup>	Change the PCIe lanes. Default setting is Auto.
SLOT# Max Link Speed <sup>(Note1)</sup>	Configure PCIe max link speed. Options available: Auto, Gen1, Gen2, Gen3, Gen4, Gen5. Default setting is <b>Auto</b> .
M2M I/O ROM <sup>(Note2)</sup>	Enable/Disable M2M devices, and initializes device expansion ROM. Options available: Enabled, Disabled. Default setting is <b>Enabled</b> .
M2M Lanes <sup>(Note2)</sup>	Change the M2M PCIe lanes. Options available: Auto, x4, x2x2. Default setting is <b>Auto</b> .
M2M Max Link Speed <sup>(Note2)</sup>	Configure M2M max link speed. Options available: Auto, Gen1, Gen2, Gen3, Gen4, Gen5. Default setting is <b>Auto</b> .

(Note1) This section is dependent on the available PCIe Slot.

(Note2) This section is dependent on the available M.2 Slot.

Parameter	Description
PCI Devices Common Settings	
Above 4G Decoding	Enable/Disable memory mapped I/O to 4GB or greater address space (Above 4G Decoding). Options available: Enabled, Disabled. Default setting is <b>Enabled</b> .
SR-IOV Support	If the system has SR-IOV capable PCIe devices, this item Enable/ Disable Single Root IO Virtualization Support. Options available: Enabled, Disabled. Default setting is <b>Enabled</b> .

## 5-2-5 USB Configuration

Advanced	Aptio Setup – AMI	
USB Configuration		This is a workaround for
USB Devices:		OSes without XHCI hand-off support. The XHCI
8 Drives, 1 Keyboard, 1 Mouse,	2 Hubs	ownership change should be claimed by XHCI driver.
XHCI Hand—off		
USB Mass Storage Driver Support	[Enabled]	
Port 60/64 Emulation	[Enabled]	
		++: Select Screen
		f∔: Select Item
		K/M: Scroll Help Area
		Up/Down.
		Enter: Select
		+/-: Change Opt. F1: General Help
		F3: Previous Values
		F9: Optimized Defaults
		F10: Save & Exit
		ESC: Exit
Langian 0	.22.1287 Copyright (C) 2023 AMI	

Parameter	Description
USB Configuration	
USB Devices:	Displays the USB devices connected to the system.
XHCI Hand-off	Enable/Disable the XHCI (USB 3.0) Hand-off support. Options available: Enabled, Disabled. Default setting is <b>Enabled</b> .
USB Mass Storage Driver Support <sup>(Note)</sup>	Enable/Disable the USB Mass Storage Driver Support. Options available: Enabled, Disabled. Default setting is <b>Enabled</b> .
Port 60/64 Emulation	Enables the I/O port 60h/64h emulation support. This should be enabled for the complete USB Keyboard Legacy support for non- USB aware OSes. Options available: Enabled, Disabled. Default setting is <b>Enabled</b> .

## 5-2-6 Network Stack Configuration

Enable/Disable UEFI Network Stack
++: Select Screen 11: Select Item K/M: Scroll Help Area Up/Down. Enter: Select +/-: change Opt. F1: General Help F3: Previous Values F9: Optimized Defaults F10: Save & Exit ESC: Exit

Version 2.22.1	287 Copyright	(C) 2023 AMI

Parameter	Description
Network Stack	Enable/Disable the UEFI network stack. Options available: Enabled, Disabled. Default setting is <b>Enabled</b> .
Ipv4 PXE Support	Enable/Disable the Ipv4 PXE feature. Options available: Enabled, Disabled. Default setting is <b>Enabled</b> .
Ipv4 HTTP Support	Enable/Disable the Ipv4 HTTP feature. Options available: Enabled, Disabled. Default setting is <b>Disabled</b> .
Ipv6 PXE Support	Enable/Disable the Ipv6 PXE feature. Options available: Enabled, Disabled. Default setting is <b>Disabled</b> .
Ipv6 HTTP Support	Enable/Disable the Ipv6 HTTP feature. Options available: Enabled, Disabled. Default setting is <b>Disabled</b> .
PXE boot wait time	Wait time in seconds to press ESC key to abort the PXE boot. Press the <+> / <-> keys to increase or decrease the desired values.
Media detect count	Number of times the presence of media will be checked. Press the <+> / <-> keys to increase or decrease the desired values.

## 5-2-7 Post Report Configuration

\_

Post Report Configuration		Post Error Message Suppor Enabled/Disabled
Error Message Report		Endbied/Disubled
Halt On	[No Error]	
		++: Select Screen
		11: Select Item
		K/M: Scroll Help Area
		Up/Down.
		Enter: Select +/-: Change Opt.
		F1: General Help
		F3: Previous Values
		F9: Optimized Defaults
		F10: Save & Exit ESC: Exit
		CSU. EXIL

Parameter	Description
Post Report Configuration	
Error Message Report	
Post Error Message	Enable/Disable the POST Error Message support. Options available: Enabled, Disabled. Default setting is <b>Enabled</b> .
Halt On	Options available: No Error, All Error. Default setting is No Error.

### 5-2-8 NVMe Configuration

Parameter	Description
NVMe Configuration	Displays the NVMe devices connected to the system.

### 5-2-9 Chipset Configuration

Advanced	Aptio Setup – AMI	
Restore AC Power Loss P2P Bridge IO Size	[Last State] [0×1000]	Specify what state when power is re-applied after a power failure (G3 state)
SATA HDD Security Frozen NVME SSD Security Frozen NVME DDROM Select NVME LED Control Chassis Opened Warning	[Enabled] [Enabled] [BIOS Build-In] [Disable] [Disabled]	
		++: Select Screen 11: Select Item K/M: Scroll Help Area Up/Down. Enter: Select +/-: Change Opt. F1: General Help F3: Previous Values F9: Optimized Defaults
	ion 2.22.1287 Copyright (C) 20	F10: Save & Exit ESC: Exit

Parameter	Description
Restore on AC Power Loss <sup>(Note)</sup>	Defines the power state to resume to after a system shutdown that is due to an interruption in AC power. When set to Last State, the system will return to the active power state prior to shutdown. When set to Power Off, the system remains off after power shutdown. Options available: Last State, Power Off, Power On, Unspecified. The default setting depends on the BMC setting.
P2P Bridge IO Size	Specifies P2P Bridge IO aligned to the size. Options available: 0x100, 0x150, 0x1000. Default setting is <b>0x1000</b> .
SATA HDD Security Frozen	Enable/Disable this item to send freeze lock command to SATA HDD. Options available: Enabled, Disabled. Default setting is <b>Enabled</b> .
NVMe SSD Security Frozen	Attempt to send freeze lock command to NVMe SSDs during boot. Options available: Enabled, Disabled. Default setting is <b>Enabled</b> .
NVMe OPROM Select	Options available: BIOS Build-In, NVMe Device, Disabled. Default setting is <b>BIOS Build-In</b> .
NVMe LED Control	Enable/Disable allow user control NVMe LED. It only available the NVMe device direct connect to CPU. Options available: Disable, Enable. Default setting is <b>Disable</b> .

(Note) When the power policy is controlled by BMC, please wait for 15-20 seconds for BMC to save the last power state.

Parameter	Description
Chassis Opened Warning	Enable/Disable the chassis intrusion alert function. Options available: Enabled, Disabled, Clear. Default setting is <b>Disabled</b> .

## 5-2-10 TIs Auth Configuration

Aptio Setu	p - AMI
	Press <enter> to configure Server CA.</enter>
▶ Client Cert Configuration	
	t↓: Select Item K/M: Scroll Help Area Up/Down. Enter: Select +/-: Change Opt.
	F1: General Help F3: Previous Values F9: Optimized Defaults F10: Save & Exit ESC: Exit
Version 2.22.1287 Cop	unight (C) 2023 AMI

Parameter	Description
	Press [Enter] for configuration of advanced items.
Server CA Configuration	Enroll Cert
	<ul> <li>Press [Enter] to enroll a certificate</li> </ul>
	Enroll Cert Using File
	Cert GUID
	Input digit character in 1111111-2222-3333-4444-1234567890ab
	format.
	<ul> <li>Commit Changes and Exit</li> </ul>
	<ul> <li>Discard Changes and Exit</li> </ul>
	Delete Cert
Client Cert Configuration	Press [Enter] for configuration of advanced items.

## 5-2-11 iSCSI Configuration

	Change the priority using
▶ Host ISCSI Configuration	+/- keys. Use arrow keys to select the attempt then press +/- to move the attempt up/down in the attempt order list.
	++: Select Screen 14: Select Item K/M: Scroll Help Area Up/Doun. Enter: Select +/-: Change Opt. Fi: General Help F3: Previous Values F9: Optimized Defaults F10: Save & Exit ESC: Exit

Parameter	Description
Attempt Priority	<ul> <li>Press [Enter] configure advanced items.</li> <li>Attempt Priority <ul> <li>Use arrow keys to select the attempt, then press +/- keys to move the attempt up/down in the attempt order list.</li> </ul> </li> <li>Commit Changes and Exit</li> </ul>
Host iSCSI Configuration	<ul> <li>Press [Enter] to configure advanced items.</li> <li>iSCSI Initiator Name <ul> <li>Only IQN format is accepted. Range: from 4 to 223</li> </ul> </li> <li>Add an Attempt</li> <li>Delete Attempts</li> <li>Change Attempt Order</li> </ul>

## 5-3 Chipset Menu

Chipset Setup menu displays submenu options for configuring the function of Platform Controller Hub(PCH). Select a submenu item, then press <Enter> to access the related submenu screen.

Aptio Setup – AMI Main Advanced <mark>Chipset</mark> Server Mgmt Security Boot Save & Exit

Parameter	Description
Processor Configuration	
Pre-Socket Configuration	<ul> <li>Press [Enter] to configure advanced items.</li> <li>CPU Socket 0 Configuration <ul> <li>Core Disable Bitmap(Hex)</li> <li>Number of Cores to enable. 0 means all cores. FFFFFFF means to disable all cores. The maximum value depends on the number of CPUs available. Press the numeric keys to adjust desired values.</li> </ul> </li> </ul>
Processor Socket / Processor ID / Processor Die Type / Processor Frequency / Processor Max Ratio / Processor Min Ratio / Microcode Revision / L1 Cache RAM(Per Core) / L2 Cache RAM(Per Core) / L3 Cache RAM(Per Package) / Processor # Version	Displays the technical specifications for the installed processor(s).
Enable LP [Global]	Enables Logical processor (Software Method to Enable/Disable Logical Processor threads). Options available: ALL LPs, Single LP. Default setting is <b>ALL LPs</b> .
Hardware Prefetcher	Select whether to enable the speculative prefetch unit of the processor. Options available: Enable, Disable. Default setting is <b>Enable</b> .
L2 RF0 Prefetch Disable	Options available: Enable, Disable. Default setting is <b>Disable</b> .
Adjacent Cache Prefetch	When enabled, cache lines are fetched in pairs. When disabled, only the required cache line is fetched. Options available: Enable, Disable. Default setting is <b>Enable</b> .
DCU Streamer Prefetcher	Enable/Disable DCU streamer prefetcher. Options available: Enable, Disable. Default setting is <b>Enable</b> .
DCU IP Prefetcher	Enable/Disable DCU IP Prefetcher. Options available: Enable, Disable. Default setting is <b>Enable</b> .
Extended APIC	Enable/Disable extended APIC support. Note: The VT-d will be enabled automatically when x2APIC is enabled. Options available: Enable, Disable. Default setting is <b>Enable</b> .
Enable Intel(R) TXT	Enable/Disable the Intel Trusted Execution Technology support function. Options available: Enable, Disable. Default setting is <b>Disable</b> .
VMX	Enable/Disable the Vanderpool Technology. This will take effect after rebooting the system. Options available: Enable, Disable. Default setting is <b>Enable</b> .
Enable SMX	Enable/Disable the Safer Mode Extensions (SMX) support function. Options available: Enable, Disable. Default setting is <b>Disable</b> .
AES-NI	Enable/Disable the AES-NI support. Options available: Enable, Disable. Default setting is <b>Enable</b> .
Debug Consent	Options available: Enable, Disable. Default setting is <b>Disable</b> .

Parameter	Description
Memory Encryption (TME) <sup>(Note)</sup>	Enable/Disable memory encryption (TME). Options available: Enabled, Disabled. Default setting is <b>Disabled</b> .
Total Memory Encryption Multi-Tenant (TME-MT)	Options available: Enabled, Disabled. Default setting is <b>Disabled</b> .
Processor CFR Configuration	<ul> <li>Press [Enter] to configure advanced items.</li> <li>Provision S3M CFR <ul> <li>Options available: Disable, Enable. Parameter	Description	
	•	MMIO High Granularity Size
		<ul> <li>Selects the allocation size used to assign mmioh resources.</li> </ul>
UPI General Configuration		- Options available: 1G, 4G, 16G, 64G, 256G, 1024G. Default setting is
(continued)		64G.
	•	Limit CPU PA to 46 bits
		- Options available: Disable, Enable. Default setting is Disable.

# 5-3-4 Memory Configuration

Integrated Memory Controller (iMC)		Enforces Plan Of Record restrictions for DDR frequency programming.
Enforce DDR Memory Frequency PDR Memory Frequency Enable ADR Legacy ADR Mode Minimum System Memory Size ADR Data Save Mode Assert ADR on Reset Assert ADR on SS	[POR] [Auto] [Enable] [Auto] [268] [NVDIMMS] [Disabled] [Disabled]	
Get Memory Timing Memory Topology Memory Map Memory RAS Configuration	[BIOS Build-in]	<pre>++: Select Screen 11: Select Item K/M: Scroll Help Area Up/Down. Enter: Select +/-: Change Opt. F1: General Help F3: Previous Values F9: Optimized Defaults F10: Save &amp; Exit ESC: Exit</pre>

Parameter	Description
Integrated Memory Controller (iMC)	
Enforce DDR Memory Frequency POR	When set to Enable, the system enforces Plan Of Record restrictions for DDR frequency programming. Options available: POR, Disable. Default setting is <b>POR</b> .
Memory Frequency	Configures the maximum memory frequency. If Enforce POR is disabled, user will be able to run at higher frequencies than the memory support (limited by processor support). Default setting is <b>Auto</b> .
Enable ADR	Enables the detecting and enabling of ADR (Asynchronous DRAM Refresh) function. Options available: Enable, Disable. Default setting is <b>Enable</b> .
Legacy ADR Mode	Enable/Disable the Legacy ADR Mode. Options available: Enable, Disable, Auto. Default setting is <b>Auto</b> .
Minimum System Memory Size	Configures the minimum memory size. Options available: 2GB, 4GB, 6GB, 8GB. Default setting is <b>2GB</b> .
ADR Data Save Mode	Specifies the Data Save Mode for ADR. Batterybacked or Type 01 NVDIMM. Options available: Disable, Batterybacked DIMMs, NVDIMMs, Copy to Flash. Default setting is <b>NVDIMMs</b> .
Assert ADR on Reset	Enable/Disable Assert ADR on Reset. Options available: Enabled, Disabled. Default setting is <b>Disabled</b> .

Parameter	Description	
Assert ADR on S5	Enable/Disable Assert ADR on S5. Options available: Enabled, Disabled. Default setting is <b>Disabled</b> .	
Get Memory Timing	Auto is the detected SPD value and use it, otherwise use BIOS Build-in. Options available: Auto, BIOS Build-in. Default setting is <b>BIOS Build-in</b> .	
Memory Topology	Press [Enter] to view memory topology with DIMM population information.	
Memory Map	<ul> <li>Press [Enter] to configure advanced items.</li> <li>Volatile Memory Mode <ul> <li>Selects 1LM or 2LM mode for volatile memory.</li> <li>Options available: 1LM, 2LM. Default setting is 2LM.</li> </ul> </li> </ul>	
Memory RAS Configuration	<ul> <li>Press [Enter] to configure advanced items.</li> <li>Mirror Mode<sup>(Note)</sup> <ul> <li>Mirror Mode will set entire 1LM memory in system to be mirrored, consequently reducing the memory capacity by half. Enables the Mirror Mode will disable the XPT Prefetch.</li> <li>Options available: Disabled, Full Mirror Mode, Partial Mirror Mode. Default setting is <b>Disabled</b>.</li> </ul> </li> <li>Partial Mirror 1 Size (GB) <ul> <li>Selects multiplier of 1GB for the size of the SAD to be created.</li> </ul> </li> <li>Correctable Error Threshold <ul> <li>Correctable Error Threshold (0x01-0x7fff) used for sparing, and leaky bucket.</li> <li>Press the &lt;+&gt; / &lt;-&gt; keys to increase or decrease the desired values.</li> </ul> </li> <li>Trigger SW Error Threshold<sup>(Note)</sup> <ul> <li>Enable/Disable Sparing trigger SW Error Match Threshold.</li> <li>Options available: Disabled, Enabled. Default setting is <b>Disabled</b>.</li> </ul> </li> <li>SW Per Bank Threshold (1-0x7FFF) used for DDR bank level error.</li> <li>Press the &lt;+&gt; / &lt;-&gt; keys to increase or decrease the desired values.</li> </ul> <li>SW Correctable Error Time Window <ul> <li>SW Correctable Error Time Window</li> <li>SW Correctable Error Time Window</li> <li>SW Correctable Error Time window based interface in hour (0-24).</li> <li>Press the &lt;+&gt; / &lt;-&gt; keys to increase or decrease the desired values.</li> </ul> </li>	

(Note) Advanced items prompt when this item is defined.

### 5-3-5 IIO Configuration

	Press <enter> to bring up the Intel Virtualization for Directed I/O (VT-d) Configuration menu.</enter>
[4096B] [Yes]	++: Select Screen 14: Select Item K/M: Scroll Help Area Ub/Down.
	Enter: Select +/-: Change Opt. F1: General Help F3: Previous Values F9: Optimized Defaults F10: Save & Exit ESC: Exit

Parameter	Description
IIO Configuration	
Intel® VT for Directed I/O (VT-d)	<ul> <li>Press [Enter] to configure advanced items.</li> <li>Intel® VT for Directed I/O <ul> <li>Enable/Disable the Intel VT for Directed I/O (VT-d) support function by reporting the I/O device assignment to VMM through DMAR ACPI Tables.</li> <li>Options available: Enable, Disable. Default setting is Enable.</li> </ul> </li> <li>Cache Allocation <ul> <li>Options available: Enable, Disable. Default setting is Enable.</li> </ul> </li> <li>Cache Allocation <ul> <li>Options available: Enable, Disable. Default setting is Enable.</li> </ul> </li> <li>DMA Control Opt-In Flag <ul> <li>Enable/Disable DMA_CTRL_PLATFORM_OPT_IN_FLAG in DMAR table in ACPI. Not compatible with Direct Device Assignment (DDA).</li> <li>Options available: Enable, Disable. Default setting is Disable.</li> </ul> </li> <li>Interrupt Remapping <ul> <li>Enable/Disable the interrupt remapping support function.</li> <li>Options available: Enable, Disable. Default setting is Auto</li> </ul> </li> <li>x2APIC Opt Out <ul> <li>Options available: Enable, Disable. Default setting is Disable.</li> </ul> </li> </ul>

Parameter	Description
Intel® VT for Directed I/O (VT-d) (continued)	<ul> <li>PCIe ACSCTL         <ul> <li>Enable/Disable overwrite of PCI Access Control Services Control register in PCI root ports.</li> <li>Options available: Disable, Enable. Default setting is Disable.</li> </ul> </li> <li>Source Validation<sup>(Note)</sup> <ul> <li>Options available: Disabled, Enabled. Default setting is Disabled.</li> </ul> </li> <li>Translation Blocking<sup>(Note)</sup> <ul> <li>Options available: Disabled, Enabled. Default setting is Disabled.</li> </ul> </li> <li>Translation Blocking<sup>(Note)</sup> <ul> <li>Options available: Disabled, Enabled. Default setting is Disabled.</li> </ul> </li> <li>P2P Request Redirect<sup>(Note)</sup> <ul> <li>Options available: Disabled, Enabled. Default setting is Enabled.</li> <li>P2P Completion Redirect<sup>(Note)</sup> <ul> <li>Options available: Disabled, Enabled. Default setting is Enabled.</li> <li>P2P Completion Redirect<sup>(Note)</sup> <ul> <li>Options available: Disabled, Enabled. Default setting is Enabled.</li> <li>Upstream Forwarding Enable<sup>(Note)</sup> <ul> <li>Options available: Disabled, Enabled. Default setting is Enabled.</li> </ul> </li> </ul></li></ul></li></ul></li></ul>
Intel® VMD technology	Press [Enter] to configure advanced items.         Intel® VMD Configuration         - Enable/Disable Intel® VMD technology.         - Options available: Enable, Disable. Default setting is Disable.         * Intel® VMD for Non-Hotplug NVMe <sup>(Note1)</sup> - Enable/Disable Intel® VMD for Non-Hotplug NVMe.         - Options available: Enable, Disable. Default setting is Disable.
IIO-PCIE Express Global Options	
PCIe Max Read Request Size	Options available: Auto, 128B, 256B, 512B, 1024B, 2048B, 4096B. Default setting is <b>4096B</b> .
Pcie Relaxed Ordering	Options available: No, Yes. Default setting is Yes.

(Note) This item is available when PCIe ACSCTL is set to Enable.

(Note1) This item appears when Intel® VMD Configuration is set to Enable.

### 5-3-6 Advanced Power Management Configuration

Advanced Power Management Configuration	P State Control
CPU P State Control Hardware PM State Control CPU C State Control Package C State Control CPU - Advanced PM Tuning SOCKET RAPL Config	Configuration Sub Menu, include Turbo, XE and etc
	<pre>++: Select Screen 11: Select Item K/M: Scroll Help Area Up/Down. Enter: Select +/-: Change Opt. F1: General Help F3: Previous Values F9: Optimized Defaults F10: Save &amp; Exit ESC: Exit</pre>

Parameter	Description
CPU P State Control	<ul> <li>Press [Enter] to configure advanced items.</li> <li>SpeedStep (Pstates) <ul> <li>Conventional Intel SpeedStep Technology switches both voltage and frequency in tandem between high and low levels in response to processor load.</li> <li>Options available: Enable, Disable. Default setting is Enable.</li> </ul> </li> <li>Turbo Mode <ul> <li>When this item is enabled, the processor will automatically ramp up the clock speed of 1-2 of its processing cores to improve its performance. When this item is disabled, the processor will not overclock any of its core.</li> <li>Options available: Enable, Disable. Default setting is Enable.</li> </ul> </li> </ul>
Hardware PM State Control	<ul> <li>Press [Enter] to configure advanced items.</li> <li>Hardware P-States <ul> <li>When this item is disabled, the processor hardware chooses a P-state based on OS Request (Legacy P-States).</li> <li>In Native mode, the processor hardware chooses a P-state based on OS guidance.</li> <li>In Out of Band mode, the processor hardware autonomously chooses a P-state (with no OS guidance).</li> <li>Options available: Disable, Native Mode, Out of Band Mode, Native Mode with No Legacy Support. Default setting is Native Mode.</li> </ul> </li> </ul>

Parameter	Description
CPU C State Control	<ul> <li>Press [Enter] to configure advanced items.</li> <li>Enable Monitor MWAIT <ul> <li>Allows Monitor and MWAIT instructions.</li> <li>Options available: Disable, Enable, Auto. Default setting is Auto.</li> </ul> </li> <li>CPU C6 Report <ul> <li>Enable/Disable CPU C6(ACPI C3) report to OS.</li> <li>Options available: Disable, Enable, Auto. Default setting is Auto.</li> </ul> </li> <li>Enhanced Halt State (C1E) <ul> <li>Core C1E auto promotion control. Takes effect after reboot.</li> <li>Options available: Enable, Disable. Default setting is Enable.</li> </ul> </li> </ul>
Package C State Control	<ul> <li>Press [Enter] to configure advanced items.</li> <li>Package C State <ul> <li>Configures the state for the C-State package limit.</li> <li>Options available: C0/C1 state, C2 state, C6(non Retention) state, C6(Retention) state, No Limit, Auto. Default setting is Auto.</li> </ul> </li> </ul>
CPU - Advanced PM Tuning	Press [Enter] to configure advanced items.   Energy Perf BIAS  Press [Enter] to configure advanced items.  Power Performance Tuning  Options available: OS Controls EPB, BIOS Controls EPB, PECI Controls EPB. Default setting is <b>OS Controls EPB</b> .  Energy_PERF_BIAS_CFG mode <sup>[Note]</sup> Options available: Performance, Balanced Performance, Balanced Power, Power. Default setting is <b>Balanced</b> Performance.
SOCKET RAPL Config	<ul> <li>Press [Enter] to configure advanced items.</li> <li>PL1 Power Limit <ul> <li>PL1 Power Limit in Watts. The value may vary from 0 to Fused Value. If the value is 0, the fused value will be programmed.</li> <li>Default setting is 0.</li> </ul> </li> <li>PL1 Time Window <ul> <li>PL1 value in seconds. The value may vary from 0 to 448.</li> <li>Default setting is 1.</li> </ul> </li> <li>PL2 Power Limit <ul> <li>PL2 Power Limit in Watts. The value may vary from 0 to Fused Value. If the value is 0, BIOS programs 120% * TDP.</li> <li>Default setting is 0.</li> </ul> </li> <li>PL2 Time Window <ul> <li>PL1 value in seconds. The value may vary from 0 to 0.438.</li> <li>Default setting is 0.012.</li> </ul> </li> </ul>

(Note) This item is configurable when Power Performance Tuning is set to BIOS Controls EPB.

### 5-3-7 PCH Configuration

Aptio Setup - AMI Chipset

### 5-3-8 Miscellaneous Configuration

Miscellaneous Configuration		Select active Video type
Active Video External SSC - CK440	(Auto) [SSC Off]	
		++: Select Screen 11: Select Item K/M: Scroll Help Area Up/Down. Enter: Select +/-: Change Opt. F1: General Help F3: Previous Values F9: Optimized Defaults F10: Save & Exit ESC: Exit

Parameter	Description	
Miscellaneous Configuration		
	Selects the active video type.	
Active Video	Options available: Auto, Onboard Device, PCIE Device, Specific PCIE	
	Device. Default setting is Auto.	
	Enables Spread spectrum - only affects external clock generator.	
External SSC - CK440	Options available: SSC Off, SSC = -0.3%, SSC = -0.5%, Hardware.	
	Default setting is SSC Off.	

### 5-3-9 Server ME Configuration

Chipset	Aptio Setup – AMI	
General ME Configuration Oper. Firmware Version ME Firmware Status #1 ME Firmware Status #2 Current State Error Code Recovery Cause	18:6.0.4.16 0x0000355 0x8950206 Operational No Error N/A	<pre>++: Select Screen 11: Select Item K/M: Scroll Help Area Up/Doun. Enter: Select +/-: Change Opt. F1: General Help F3: Previous Values F9: Optimized Defaults F10: Save &amp; Exit ESC: Exit</pre>

Parameter	Description
General ME Configuration	
Oper. Firmware Version	Displays the operational firmware version.
ME Firmware Status #1/#2	Displays ME Firmware status information.
Current State	Displays ME Firmware current status information.
Error Code	Displays ME Firmware status error code.
Recovery Cause	Displays ME Firmware recovery cause.

### 5-3-10 Runtime Error Logging Settings

Runtime Error Logging		System Error
System Errors S/H Error Injection Support Whea Settings Memory Error Enabling PCIe Error Enabling	(Enable) [Disable]	Enable/Disable setup options.
		+: Select Screen 14: Select Item K/M: Scroll Help Area Up/Doun. Enter: Select +/-: Change Opt. F1: General Help F3: Previous Values F9: Optimized Defaults F10: Save & Exit ESC: Exit

Parameter	Description		
Runtime Error Logging			
Curtan Error	Enable/Disable system error logging function.		
System Errors	Options available: Enable, Disable. Default setting is Enable.		
CAN/Error Injustion Curnert	Enable/Disable software injection error logging function.		
S/W Error Injection Support	Options available: Enable, Disable. Default setting is <b>Disable</b> .		
	Press [Enter] to configure advanced items.		
Whea Settings	WHEA (Windows Hardware Error Architecture) Support		
whea Settings	<ul> <li>Enable/Disable WHEA Support.</li> </ul>		
	<ul> <li>Options available: Enable, Disable. Default setting is Enable.</li> </ul>		
	Press [Enter] to configure advanced items.		
	Memory Corrected Error		
	<ul> <li>Enable/Disable Memory Corrected Error.</li> </ul>		
Memory Error Enabling	<ul> <li>Options available: Enable, Disable. Default setting is Enable.</li> </ul>		
	Uncorrected Error disable Memory		
	<ul> <li>Enable/Disable the Memory that triggers Uncorrected Error.</li> </ul>		
	<ul> <li>Options available: Enable, Disable. Default setting is <b>Disable</b>.</li> </ul>		

Parameter	Description
PCle Error Enabling	<ul> <li>Press [Enter] to configure advanced items.</li> <li>PCIE Error <ul> <li>Enable/Disable PCIE error.</li> <li>Options available: Enable, Disable. Default setting is <b>Disable</b>.</li> </ul> </li> <li>Uncorrected Error<sup>(Note)</sup> <ul> <li>Enables and escalates Uncorrectable/Recoverable Errors to error pins.</li> <li>Options available: Enable, Disable. Default setting is <b>Enable</b>.</li> </ul> </li> <li>Fatal Error Enable<sup>(Note)</sup> <ul> <li>Enables and escalates Fatal Errors to error pins.</li> <li>Options available: Enable, Disable. Default setting is <b>Enable</b>.</li> </ul> </li> <li>Fatal Error Enable<sup>(Note)</sup> <ul> <li>Enables and escalates Fatal Errors to error pins.</li> <li>Options available: Enable, Disable. Default setting is <b>Enable</b>.</li> </ul> </li> <li>Assert NMI on SERR<sup>(Note)</sup> <ul> <li>Enable/Disable BIOS generates a non-maskable interrupt (NMI) and logs an error when a system error (SERR) occurs.</li> <li>Options available: Enabled, Disabled. Default setting is <b>Enabled</b>.</li> </ul> </li> <li>Assert NMI on PERR<sup>(Note)</sup> <ul> <li>Enable/Disable BIOS generates a non-maskable interrupt (NMI) and logs an error when a system error (SERR) occurs.</li> <li>Options available: Enabled, Disabled. Default setting is <b>Enabled</b>.</li> </ul> </li> <li>Assert NMI on PERR<sup>(Note)</sup> <ul> <li>Enable/Disable BIOS generates a non-maskable interrupt (NMI) and logs an error when a processor bus parity error (PERR) occurs.</li> <li>Options available Enabled, Disabled. Default setting is <b>Enabled</b>.</li> </ul> </li> </ul>

### 5-3-11 Power Policy

[Standard] [Enable] [Auto] [Auto] [Auto] [Auto] [ALL LPs] [Enable] [Enable] [Enable] [Enable] [Enable]	Select a Power Policy Quick Setting(The following items will be set based on the selected power policy)
	++: Select Screen 11: Select Item K/M: Scroll Help Area Up/Down. Enter: Select +/-: Change Opt. F1: General Help F3: Previous Values F9: Optimized Defaults F10: Save & Exit ESC: Exit
	[Enable] [Enable] [Auto] [Auto] [ALL LPS] [Enable] [Enable] [Enable]

Parameter	Description
	Selects a Power Policy Quick Setting.
Power Policy Quick Settings	Options available: Standard, Best Performance, Energy Efficient. Default
	setting is Standard.
	Conventional Intel SpeedStep Technology switches both voltage and
SpeedStep (Pstates)	frequency in tandem between high and low levels in response to processor
Speedslep (Fsiales)	load.
	Options available: Enable, Disable. Default setting is <b>Enable</b> .
	When this item is enabled, the processor will automatically ramp up the
Turbo Mode	clock speed of 1-2 of its processing cores to improve its performance.
	When this item is disabled, the processor will not overclock any of its core.
	Options available: Enable, Disable. Default setting is <b>Enable</b> .
	Enable/Disable the BIOS to enable the report from the CPU C6 state (ACPI
CPU C6 report	C3) to the OS.
	Options available: Disable, Enable, Auto. Default setting is Auto.
	Enable/Disable the C1E support for lower power consumption. Takes effect
Enhanced Halt State (C1E)	after reboot.
	Options available: Enable, Disable. Default setting is <b>Enable</b> .
	Configures the C-State package limit.
Package C State	Options available: C0/C1 state, C2 state, C6(non Retention) state,
	C6(Retention) state, No Limit, Auto. Default setting is Auto.

Parameter	Description	
	Enables Logical processor (Software Method to Enable/Disable Logical	
Enable LP [Global]	Processor threads).	
	Options available: ALL LPs, Single LP. Default setting is ALL LPs.	
Hardware Prefetcher	Options available: Enable, Disable. Default setting is <b>Enable</b> .	
Adjacent Cache Prefetch	Options available: Enable, Disable. Default setting is <b>Enable</b> .	
DCU Streamer Prefetcher	Options available: Enable, Disable. Default setting is <b>Enable</b> .	
Intel® VT for Directed I/O	Enable/Disable the Intel VT for Directed I/O (VT-d) support function by reporting the I/O device assignment to VMM through DMAR ACPI Tables. Options available: Enable, Disable. Default setting is <b>Enable</b> .

BMC VLAN Configuration	
	Select to configure BMC VLAN ID. The valid range is from 0 to 4094. When
BMC VLAN ID	set to 0, BMC VLAN ID will be disabled.
	Select to configure BMC VLAN Priority. The valid range is from 0 to 7.
BMC VLAN Priority	When BMC VLAN ID is set to 0, BMC VLAN Priority will not be selected.

### 5-4-4 BMC Network Configuration

––BMC network configuration––		Select to configure LAN
Select NCSI and Dedicated LAN		channel parameters
Lan channel 1		statically or
Configuration Address source	[DynamicBmcDhcp]	dynamically(DHCP). Do nothing option will not
Station IP address	10.1.112.37	modify any BMC network
Subnet mask	255.255.255.0	parameters during BIOS
Router IP address	10.1.112.253	phase
Station MAC address	D8-5E-D3-E3-F9-D7	
		++: Select Screen †4: Select Item
		++: Select Screen
		K/M: Scroll Help Area
		Up/Down.
		Enter: Select
		+/-: Change Opt. E1: General Help
		F1: General Help F3: Previous Values
		F1: General Help F3: Previous Values F9: Optimized Defaults
		F1: General Help F3: Previous Values

Parameter	Description
BMC network configuration	
Select NCSI and Dedicated LAN	Options available: Do Nothing, Model1(Dedicated), Model2(NCSI), Mode3(Failover). Default setting is <b>Do Nothing</b> .
Lan Channel 1	
Configuration Address source	Selects to configure LAN channel parameters statically or dynamically (DHCP). Options available: Unspecified, Static, DynamicBmcDhcp. Default setting is <b>DynamicBmcDhcp</b> .
Station IP address	Displays IP Address information.
Subnet mask	Displays Subnet Mask information. Please note that the IP address must be in three digitals, for example, 192.168.000.001.
Router IP address	Displays the Router IP Address information.
Station MAC address	Displays the MAC Address information.
Real-time get BMC network address	Press [Enter] will set LAN mode and Address source and then get IP, Subnet, Gateway and MAC address.

#### 5-4-5 IPv6 BMC Network Configuration

Parameter	Description
IPv6 BMC network configuration	
IPv6 BMC Lan Channel 1	
IPv6 BMC Lan Option	Enable/Disable IPv6 BMC LAN channel function. When this item is disabled, the system will not modify any BMC network during BIOS phase. Options available: Unspecified, Disable, Enable. Default setting is Enable.
IPv6 BMC Lan IP Address Source	Selects to configure LAN channel parameters statically or dynamically (by BIOS or BMC). Options available: Unspecified, Static, Dynamic-Obtained by BMC running DHCP. Default setting is <b>Dynamic-Obtained by BMC running DHCP</b> .
IPv6 BMC Lan IP Address/ Prefix Length	Check if the IPv6 BMC LAN IP address matches those displayed on the screen.

## 5-5 Security Menu

The Security menu allows you to safeguard and protect the system from unauthorized use by setting up access passwords.

Main Advanced Chipset Ser	Aptio Setup – A⊬ ver Mgmt Security Boot	
Password Description		Sets administrative password
If ONLY the Administrator's p then this only limits access only asked for when entering If ONLY the User's password i is a power on password and mu	to Setup and is Setup. s set, then this	
boot or enter Setup. In Setup have Administrator rights.	) the User will	
The password length must be in the following range:		
Minimum length	з	
Maximum length	20	++: Select Screen ↑↓: Select Item
Administrator Password		K/M: Scroll Help Area
User Password		Up/Down. Enter: Select +/−: Change Opt.
		F1: General Help F3: Previous Values
▶ Secure Boot		F9: Optimized Defaults F10: Save & Exit ESC: Exit
	rsion 2.22.1287 Copyright	

There are two types of passwords that you can set:

Administrator Password

Entering this password will allow the user to access and change all settings in the Setup Utility.

User Password

Entering this password will restrict a user's access to the Setup menus. To enable or disable this field, a Administrator Password must first be set. A user can only access and modify the System Time, System Date, and Set User Password fields.

Parameter	Description
Administrator Password	Press [Enter] to configure the administrator password.
User Password	Press [Enter] to configure the user password.
Secure Boot	Press [Enter] to configure advanced items.

#### 5-5-1 Secure Boot

The Secure Boot submenu is applicable when your device is installed the Windows® 8 (or above) operating system.

System Mode	Setup	Secure Boot feature is Active if Secure Boot is
	[Disabled] Not Active	Enabled, Platform Key(PK) is
		enrolled and the System i
Secure Boot Mode	[Custom]	in User mode.
Restore Factory Keys Reset To Setup Mode		The mode change requires platform reset
Key Management		
		++: Select Screen
		↑↓: Select Item K/M: Scroll Help Area
		Up/Down.
		Enter: Select
		+/-: Change Opt.
		F1: General Help F3: Previous Values
		F9: Optimized Defaults
		F10: Save & Exit
		ESC: Exit

Parameter	Description
System Mode	Displays if the system is in User mode or Setup mode.
Secure Boot	Enable/ Disable the Secure Boot function. Options available: Enabled, Disabled. Default setting is <b>Disabled</b> .
Secure Boot Mode <sup>(Note)</sup>	Secure Boot requires all the applications that are running during the booting process to be pre-signed with valid digital certificates. This way, the system knows all files being loaded before Windows loads to the login screen have not been tampered with. When set to Standard, it will automatically load the Secure Boot keys form the BIOS databases. When set to Custom, you can customize the Secure Boot settings and manually load its keys from the BIOS database. Options available: Standard, Custom. Default setting is <b>Custom</b> .
Restore Factory Keys	Forces the system to user mode and installs factory default Secure Boot key database.
Reset To Setup Mode	Reset the system to Setup Mode.

(Note) Advanced items prompt when this item is set to Custom.

Parameter	Description
Key Management	<ul> <li>Press [Enter] to configure advanced items.</li> <li>Please note that this item is configurable when Secure Boot Mode is set to Custom. <ul> <li>Factory Key Provision</li> <li>Allows to provision factory default Secure Boot keys when system is in Setup Mode.</li> <li>Options available: Enabled, Disabled. ▶ UEFI Application Boot Priorities		F9: Optimized Defaults F10: Save & Exit ESC: Exit

Version 2.22.1287 Copyright (C) 2023 AMI

Parameter	Description
Boot Configuration	
Setup Prompt Timeout	Number of seconds to wait for setup activation key. 65535 (0xFFFF) means indefinite waiting. Press the numeric keys to input the desired values.
Bootup NumLock State	Enable/Disable the Bootup NumLock function. Options available: On, Off. Default setting is <b>On</b> .
Quiet Boot	Enable/Disable showing the logo during POST. Options available: Enabled, Disabled. Default setting is <b>Enabled</b> .
Endless Retry Boot	Options available: Disable, Enable. Default setting is <b>Disable</b> .
Setup Flash	Press [Enter] to run setup flash.
Dump full Setup Data	Press [Enter] to dump full setup data to file.
Dump non-default Setup Data	Press [Enter] to dump non-default setup data to file.
Restore Setup Data	Press [Enter] to restore setup data from file.

Parameter	Description	
FIXED BOOT ORDER Priorities		
Boot Option #1 / #2 / #3 / #4 / #5	Press [Enter] to configure the boot order priority. By default, the server searches for boot devices in the following sequence: 1. Hard drive. 2. CD-COM/DVD drive. 3. USB device. 4. Network. 5. UEFI.	
UEFI Application Boot Priorities	Press [Enter] to configure the boot priority.	

## 5-7 Save & Exit Menu

The Save & Exit menu displays the various options to quit from the BIOS setup. Highlight any of the exit options then press <Enter>.

Aptio Setup – AMI Main Advanced Chipset Server Mgmt Security Boot <mark>Save &amp; Exit</mark>	
Save Options Save & Exit Discard changes & exit Save Changes and Reset Discard Changes Discard Changes	Exit system setup after saving the changes.
Default Options Restore Defaults Save the User Default Values Restore the User Default Values Boot Device Priority Windows Boot Manager (SCSI Hard Drive, Partition 1) UEFI: Built-in EFI Shell Launch EFI Shell	<pre>++: Select Screen fl: Select Item K/M: Scroll Help Area Up/Doum. Enter: Select +/-: Change Opt. Fl: General Help F3: Previous Values F9: Optimized Defaults F10: Save &amp; Exit ESC: Exit</pre>
Version 2 22 1287 Convirtet (C) 2023 AMT	

Parameter	Description
Save Options	
Save and Exit	Saves changes made and closes the BIOS setup. Options available: Yes, No.
Discard changes and exit	Discards changes made and exits the BIOS setup. Options available: Yes, No.
Save Changes and Reset	Restarts the system after saving the changes made. Options available: Yes, No.
Discard Changes and Reset	Restarts the system without saving any changes. Options available: Yes, No.
Save Changes	Saves changes done so far to any of the setup options. Options available: Yes, No.
Discard Changes	Discards changes made and closes the BIOS setup. Options available: Yes, No.
Default Options	

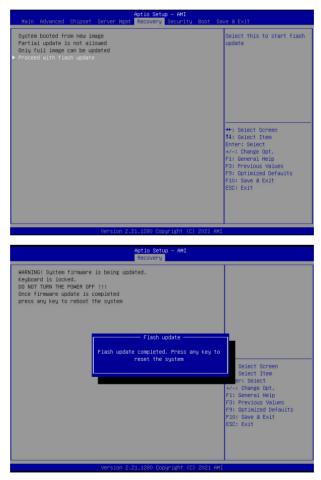

Parameter	Description
Restore Defaults	Loads the default settings for all BIOS setup parameters. Setup Defaults are quite demanding in terms of resources consumption. If you are using low-speed memory chips or other kinds of low-performance components and you choose to load these settings, the system might not function properly. Options available: Yes, No.
Save the User Default Values	Saves the changes made as the user default settings. Options available: Yes, No.
Restore the User Default Values	Loads the user default settings for all BIOS setup parameters. Options available: Yes, No.
Boot Device Priority	Press [Enter] to configure the device as the boot-up drive.
Launch EFI Shell	Attempts to Launch EFI Shell application (Shell.efi) from one of the available file system devices.

## 5-8 BIOS Recovery

The system has an embedded recovery technique. In the event that the BIOS becomes corrupt the boot block can be used to restore the BIOS to a working state. To restore your BIOS, please follow the instructions listed below:

Recovery Instruction:

- 1. Copy the XXX.rom to USB diskette.
- 2. Setting BIOS Recovery jump to enabled status.
- 3. Boot into BIOS recovery.
- 4. Run Proceed with flash update.
- 5. BIOS updated.

## 5-9 BIOS POST Beep code (AMI standard)

#### 5-9-1 PEI Beep Codes

# of Beeps	Description
1	Memory not Installed.
1	Memory was installed twice (InstallPeiMemory routine in PEI Core called twice)
2	Recovery started
3	DXEIPL was not found
3	DXE Core Firmware Volume was not found
4	Recovery failed
4	S3 Resume failed
7	Reset PPI is not available

#### 5-9-2 DXE Beep Codes

# of Beeps	Description
1	Invalid password
4	Some of the Architectural Protocols are not available
5	No Console Output Devices are found
5	No Console Input Devices are found
6	Flash update is failed
7	Reset protocol is not available
8	Platform PCI resource requirements cannot be met
