Edge Server - AMD EPYC™ 9004

2U UP 2-Bay NVMe/SATA/SAS (AAD1/Platinum redundant power supplies)

2U UP 2-Bay NVMe/SATA/SAS (AAV1/Titanium redundant power supplies)

## **User Manual**

Rev. 1.0

## **Copyright**

© 2023 Giga Computing Technology CO., LTD. All rights reserved.

The trademarks mentioned in this manual are legally registered to their respective owners.

## **Disclaimer**

Information in this manual is protected by copyright laws and is the property of Giga Computing. Changes to the specifications and features in this manual may be made by Giga Computing without prior notice. No part of this manual may be reproduced, copied, translated, transmitted, or published in any form or by any means without Giga Computing's prior written permission.

## **Documentation Classifications**

In order to assist in the use of this product, Giga Computing provides the following types of documentation:

- User Manual: detailed information & steps about the installation, configuration and use of this product (e.g. motherboard, server barebones), covering hardware and BIOS.
- User Guide: detailed information about the installation & use of an add-on hardware or software component (e.g. BMC firmware, rail-kit) compatible with this product.
- Quick Installation Guide: a short guide with visual diagrams that you can reference easily for installation purposes of this product (e.g. motherboard, server barebones).

Please see the support section of the online product page to check the current availability of these documents.

## **For More Information**

For related product specifications, the latest firmware and software, and other information please visit our website at <http://www.gigabyte.com/Enterprise>

For GIGABYTE distributors and resellers, additional sales & marketing materials are available from our reseller portal: <http://reseller.b2b.gigabyte.com>

For further technical assistance, please contact your GIGABYTE representative or visit <https://support.gigabyte.com/> to create a new support ticket

For any general sales or marketing enquiries, you may also message GIGABYTE server directly by email: [server.grp@gigabyte.com](mailto:server.grp@gigabyte.com)

## Conventions

The following conventions are used in this user's guide:

	<b>NOTE!</b> Gives bits and pieces of additional information related to the current topic.
	<b>CAUTION!</b> Gives precautionary measures to avoid possible hardware or software problems.
	<b>WARNING!</b> Alerts you to any damage that might result from doing or not doing specific actions.

## Server Warnings and Cautions

Before installing a server, be sure that you understand the following warnings and cautions.

### WARNING!

**To reduce the risk of electric shock or damage to the equipment:**

- Do not disable the power cord grounding plug. The grounding plug is an important safety feature.
- Plug the power cord into a grounded (earthed) electrical outlet that is easily accessible at all times.
- Unplug all the power cords from the power supplies to disconnect power to the equipment.

- Shock Hazard! Disconnect all power supply cords before servicing.
- Do not route the power cord where it can be walked on or pinched by items placed against it. Pay particular attention to the plug, electrical outlet, and the point where the cord extends from the server.

### WARNING!

**To reduce the risk of personal injury from hot surfaces, allow the drives and the internal system components to cool before touching them.**

### WARNING!

**This server is equipped with high speed fans. Keep away from hazardous moving fan blades during servicing.**

### WARNING!

**This equipment is intended to be used in Restrict Access Location. The access can only be gained by Skilled person. Only authorized by well trained professional person can access the restrict access location.**

### CAUTION!

- Do not operate the server for long periods with the access panel open or removed. Operating the server in this manner results in improper airflow and improper cooling that can lead to thermal damage.
- Danger of explosion if battery is incorrectly replaced.
- Replace only with the same or equivalent type recommended by the manufacturer.
- Dispose of used batteries according to the manufacturer's instructions.

### CAUTION!

Risk of explosion if battery is replaced incorrectly or with an incorrect type. Replace the battery only with the same or equivalent type recommended by the manufacturer. Dispose of used batteries according to the manufacturer's instructions.

## Electrostatic Discharge (ESD)

### CAUTION!

ESD CAN DAMAGE DRIVES, BOARDS, AND OTHER PARTS. WE RECOMMEND THAT YOU PERFORM ALL PROCEDURES AT AN ESD WORKSTATION. IF ONE IS NOT AVAILABLE, PROVIDE SOME ESD PROTECTION BY WEARING AN ANTI-STATIC WRIST STRAP ATTACHED TO CHASSIS GROUND -- ANY UNPAINTED METAL SURFACE -- ON YOUR SERVER WHEN HANDLING PARTS.

Always handle boards carefully. They can be extremely sensitive to ESD. Hold boards only by their edges without any component and pin touching. After removing a board from its protective wrapper or from the system, place the board component side up on a grounded, static free surface. Use a conductive foam pad if available but not the board wrapper. Do not slide board over any surface.

**System power on/off:** To remove power from system, you must remove the system from rack. Make sure the system is removed from the rack before opening the chassis, adding, or removing any non hot-plug components.

**Hazardous conditions, devices and cables:** Hazardous electrical conditions may be present on power, telephone, and communication cables. Turn off the system and disconnect the cables attached to the system before servicing it. Otherwise, personal injury or equipment damage can result.

**Electrostatic discharge (ESD) and ESD protection:** ESD can damage drives, boards, and other parts. We recommend that you perform all procedures in this chapter only at an ESD workstation. If one is not available, provide some ESD protection by wearing an antistatic wrist strap attached to chassis ground (any unpainted metal surface on the server) when handling parts.

**ESD and handling boards:** Always handle boards carefully. They can be extremely sensitive to electrostatic discharge (ESD). Hold boards only by their edges. After removing a board from its protective wrapper or from the system, place the board component side up on a grounded, static free surface. Use a conductive foam pad if available but not the board wrapper. Do not slide board over any surface.

**Installing or removing jumpers:** A jumper is a small plastic encased conductor that slips over two jumper pins. Some jumpers have a small tab on top that can be gripped with fingertips or with a pair of fine needle nosed pliers. If the jumpers do not have such a tab, take care when using needle nosed pliers to remove or install a jumper; grip the narrow sides of the jumper with the pliers, never the wide sides. Gripping the wide sides can damage the contacts inside the jumper, causing intermittent problems with the function controlled by that jumper. Take care to grip with, but not squeeze, the pliers or other tool used to remove a jumper, or the pins on the board may bend or break.

# Chapter 1 Hardware Installation

## 1-1 Installation Precautions

The motherboard/system contain numerous delicate electronic circuits and components which can become damaged as a result of electrostatic discharge (ESD). Prior to installation, carefully read the service guide and follow these procedures:

- Prior to installation, do not remove or break motherboard S/N (Serial Number) sticker or warranty sticker provided by your dealer. These stickers are required for warranty validation.
- Always remove the AC power by unplugging the power cord from the power outlet before installing or removing the motherboard or other hardware components.
- When connecting hardware components to the internal connectors on the motherboard, make sure they are connected tightly and securely.
- When handling the motherboard, avoid touching any metal leads or connectors.
- It is best to wear an electrostatic discharge (ESD) wrist strap when handling electronic components such as a motherboard, CPU or memory. If you do not have an ESD wrist strap, keep your hands dry and first touch a metal object to eliminate static electricity.
- Prior to installing the motherboard, please have it on top of an antistatic pad or within an electrostatic shielding container.
- Before unplugging the power supply cable from the motherboard, make sure the power supply has been turned off.
- Before turning on the power, make sure the power supply voltage has been set according to the local voltage standard.
- Before using the product, please verify that all cables and power connectors of your hardware components are connected.
- To prevent damage to the motherboard, do not allow screws to come in contact with the motherboard circuit or its components.
- Make sure there are no leftover screws or metal components placed on the motherboard or within the computer casing.
- Do not place the computer system on an uneven surface.
- Do not place the computer system in a high-temperature environment.
- Turning on the computer power during the installation process can lead to damage to system components as well as physical harm to the user.
- If you are uncertain about any installation steps or have a problem related to the use of the product, please consult a certified computer technician.

# 1-2 Product Specifications

**NOTE:**

We reserve the right to make any changes to the product specifications and product-related information without prior notice.

	<b>System Dimension</b>	<ul style="list-style-type: none"> <li>◆ 2U</li> <li>◆ 438mm (W) x 87.5mm (H) x 520mm (D)</li> </ul>
	<b>CPU</b>	<ul style="list-style-type: none"> <li>◆ AMD EPYC™ 9004 series processors</li> <li>◆ AMD EPYC™ 9004 series processors with AMD 3D V-Cache™ Technology</li> <li>◆ Single processor, 5nm technology</li> <li>◆ *Up to 128-core, 256 threads per processor</li> <li>◆ cTDP up to 300W at ambient 35°C</li> </ul> <p><b>*cTDP supported up to 400W under limited thermal conditions. ## Power Supply

### E263-Z30-AAV1

- ◆ 1+1 1600W (240V) 80 PLUS Titanium redundant power supplies
- ◆ AC Input:
  - 100-127V~/ 12A, 50-60Hz
  - 200-240V~/ 10A, 50-60Hz
- ◆ DC Input:
  - 240Vdc/ 8A
- ◆ DC Output:
  - Max 1000W/ 100-127V~
  - +12.2V/ 82A
  - +12Vsb/ 3A
  - Max 1600W/ 200-240V~ or 240Vdc Input
  - +12.2V/ 132A
  - +12Vsb/ 3A

#### NOTE:

- ◆ The default power supply is based on a basic system configuration. Please contact with technical representatives to determine the best power supply selection for your system configuration requirements and preferred efficiency.
- ◆ The power supply specifications provided herein is for the default server configuration. Different SKUs have different PSU specs, so please see the system rating label on the server for the accurate PSU specification.

## System Management

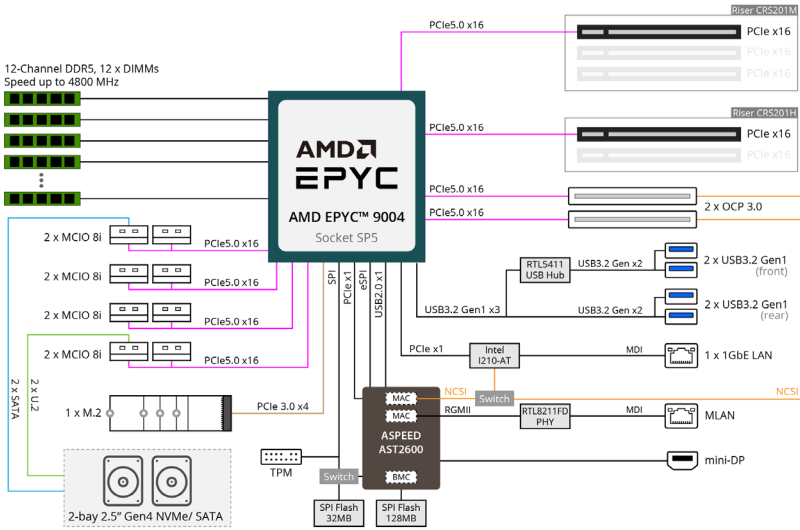

- ◆ Aspeed® AST2600 management controller
- ◆ GIGABYTE Management Console (AMI MegaRAC SP-X) web interface
  - ◆ Dashboard
  - ◆ HTML5 KVM
  - ◆ Sensor Monitor (Voltage, RPM, Temperature, CPU Status ...etc.)
  - ◆ Sensor Reading History Data
  - ◆ FRU Information
  - ◆ SEL Log in Linear Storage / Circular Storage Policy
  - ◆ Hardware Inventory
  - ◆ Fan Profile
  - ◆ System Firewall
  - ◆ Power Consumption
  - ◆ Power Control
  - ◆ LDAP / AD / RADIUS Support
  - ◆ Backup & Restore Configuration
  - ◆ Remote BIOS/BMC/CPLD Update
  - ◆ Event Log Filter
  - ◆ User Management
  - ◆ Media Redirection Settings
  - ◆ PAM Order Settings
  - ◆ SSL Settings
  - ◆ SMTP Settings

Operating  
Properties

- ◆ Operating temperature: 10°C to 35°C
- ◆ Operating humidity: 8-80% (non-condensing)
- ◆ Non-operating temperature: -40°C to 60°C
- ◆ Non-operating humidity: 20%-95% (non-condensing)

# 1-3 System Block Diagram

## Chapter 2 System Appearance

### 2-1 Front View

No.	Description
1.	Front Panel LEDs and Buttons
2.	Front USB 3.2 Gen1 Ports

- Please Go to Chapter **2-3 Front Panel LED and Buttons** for detail description of function LEDs.

## 2-2 Rear View

No.	Description
1.	PCIe Slot
2.	2.5" drive bays
3.	OCP 3.0 Slot (Option/SFF)
4.	Mini DP Port
5.	USB 3.2 Gen1 Port x 2
6.	10/100/1000 Server Management LAN Port
7.	1GbE LAN Port
8.	ID Button
9.	OCP 3.0 Slot (Option/SFF)

## 2-3 Front Panel LEDs and Buttons

No.	Name	Color	Status	Description
1.	Reset Button			Press the button to reset the system.
2.	NMI button			Press the button server generates a NMI to the processor if the multiple-bit ECC errors occur, which effectively halt the server.
3.	Power button with LED	Green	On	System is powered on
		Green	Blink	System is in ACPI S1 state (sleep mode)
		N/A	Off	<ul style="list-style-type: none"> <li>System is not powered on or in ACPI S5 state (power off)</li> <li>System is in ACPI S4 state (hibernate mode)</li> </ul>
4.	ID Button <sup>(Note)</sup>			Press the button to activate system identification
5.	HDD Status LED	Green	On	HDD locate
			Blink	HDD access
		Amber	On	HDD fault
		Green/Amber	Blink	HDD rebuilding
		N/A	Off	No HDD access or no HDD fault.
6.	System Status LED <sup>(Note)</sup>	Green	Solid On	System is operating normally.
			Amber	Solid On
		Blink		Non-critical condition, may indicate: Redundant power module failure Temperature and voltage issue Chassis intrusion
		N/A	Off	System is not ready, may indicate: POST error; NMI error; Processor or terminator missing
7.	LAN 1 Active/Link LED	Green	Solid On	Link between system and network or no access.
			Blink	Data transmission or receiving is occurring
		N/A	Off	No data transmission or receiving is occurring
8.	LAN 2 Active/Link LED			The function is disabled.

(Note) If your server features RoT function, please see the following section for detail LED behavior.

### 2-3-1 RoT LEDs

LED on Front panel <sup>(Note5)</sup>		
	ID LED	Status LED
<b>EC Firmware (FW) Authentication fail or not exit</b>		
<b>EC FW is broken or not exit</b> <sup>(Note1)</sup>	OFF	OFF
<b>Authenticating/Recovering BMC/BIOS Images</b>		
<b>Authenticating Images</b>	OFF	OFF
<b>Recovering BMC Active Flash</b>	Blinks Blue 4 times per second	Blinks Green 4 times per second
<b>Recovering BIOS Active Flash</b>	Blinks Blue 4 times per second	Blinks Green 4 times per second
<b>Authentication (AUTH) Pass</b>		
<b>Recovering BIOS Active Flash</b>	OFF	OFF
<b>BMC : AUTH pass after doing recovery</b>	OFF	OFF
<b>BIOS : AUTH pass after doing recovery</b>	OFF	OFF
<b>BMC : AUTH pass</b>	OFF	OFF
<b>BIOS : AUTH pass after doing recovery</b>	OFF	OFF
<b>Active Flash Authentication (AUTH) Fail</b>		
<b>BMC : AUTH Fail</b> <sup>(Note2)</sup>	Blinks Blue 1 time per second	Blinks Green 1 time per second
<b>BIOS : AUTH fail</b> <sup>(Note2)</sup>	Blinks Blue 1 time per second	Blinks Amber 1 time per second

<b>BMC : AUTH fail after doing recovery<sup>(Note3)</sup></b>	Blinks Blue 2 times per second [ON OFF OFF]	Blinks Green 2 times per second [ON OFF OFF]
<b>BIOS : AUTH fail after doing recovery<sup>(Note3)</sup></b>	Blinks Blue 2 times per second [ON OFF OFF]	Blinks Amber 2 times per second [ON OFF OFF]
<b>Backup Flash Authentication Fail<sup>(Note4)</sup></b>		
<b>BMC : AUTH fail</b>	Blinks Blue 2 times per second [ON OFF ON OFF]	Blinks Green 2 times per second [ON OFF ON OFF]
<b>BIOS : AUTH fail</b>	Blinks Blue 2 times per second [ON OFF ON OFF]	Blinks Amber 2 times per second [ON OFF ON OFF]

**NOTE!**

1. EC FW is broken or not exited result in Microchip CEC1702 cannot load EC FW for authentication.
2. (1) Authentication fail include below scenarios  
Configuration table is missing or modified  
Public key is missing or modified  
Protected area or signature is modified  
Flash empty
3. If active flash is still authentication failed after recovery sequence, Microchip CEC1702 stop the process and showing LED behavior.
4. If backup flash authentication is failed cause by configuration table, public key or protected area is broken. Microchip CEC1702 stop the process and showing LED behavior.
5. Front panel LED is controlled by BMC or Microchip CEC1702. Once Microchip CEC1702 is working(Auth or recovery), the front panel LED is controlled by Microchip CEC1702 and vice versa.

## 2-4 Rear System LAN LEDs

No.	Name	Color	Status	Description
1.	1GbE Speed LED	Yellow	On	1 Gbps data rate
		Green	On	100 Mbps data rate
		N/A	Off	10 Mbps data rate
2.	1GbE Link/Activity LED	Green	On	Link between system and network or no access
			Blink	Data transmission or receiving is occurring
		N/A	Off	No data transmission or receiving is occurring

## 2-5 Power Supply Unit (PSU) LED

State	Description
OFF	No AC power to all power supplies
1Hz Green Blinking	AC present / only standby on / Cold redundant mode
2Hz Green Blinking	Power supply firmware updating mode
Amber	AC cord unplugged or AC power lost; with a second power supply in parallel still with AC input power
	Power supply critical event causing shut down: failure, OCP, OVP, fan failure and UVP
1Hz Amber Blinking	Power supply warning events where the power supply continues to operate: high temp, high power, high current and slow fan

## 2-6 Hard Disk Drive LEDs

RAID SKU		LED #1	Locate	HDD Fault	Rebuilding	HDD Access	HDD Present (No Access)
No RAID configuration (via HBA)	Disk LED (LED on Back Panel)	Green	ON(*1)	OFF		BLINK (*2)	OFF
		Amber	OFF	OFF		OFF	OFF
	Removed HDD Slot (LED on Back Panel)	Green	ON(*1)	OFF		--	--
		Amber	OFF	OFF		--	--
RAID configuration (via HW RAID Card or SW RAID Card)	Disk LED	Green	ON	OFF		BLINK (*2)	OFF
		Amber	OFF	ON	(Low Speed: 2 Hz)	OFF	OFF
	Removed HDD Slot	Green	ON(*1)	OFF	(*3)	--	--
		Amber	OFF	ON	(*3)	--	--

LED #2	HDD Present	No HDD
Green	ON	OFF

**NOTE:**

\*1: Depends on HBA/Utility Spec.

\*2: Blink cycle depends on HDD's activity signal.

\*3: If HDD is pulled out during rebuilding, the disk status of this HDD is regarded as faulty.

## Chapter 3 System Hardware Installation

### Pre-installation Instructions

Computer components and electronic circuit boards can be damaged by electrostatic discharge. Working on computers that are still connected to a power supply can be extremely dangerous. Follow the simple guidelines below to avoid damage to your computer or injury to yourself.

- Always disconnect the computer from the power outlet whenever you are working inside the computer case.
- If possible, wear a grounded wrist strap when you are working inside the computer case. Alternatively, discharge any static electricity by touching the bare metal system of the computer case, or the bare metal body of any other grounded appliance.
- Hold electronic circuit boards by the edges only. Do not touch the components on the board unless it is necessary to do so. Do not flex or stress the circuit board.
- Leave all components inside the static-proof packaging until you are ready to use the component for the installation.

### 3-1 Removing Chassis Cover

Before you remove or install the system cover

- Make sure the system is not turned on or connected to AC power.

**Follow these instructions to remove the chassis cover:**

1. Remove the screw securing the chassis cover.
2. Push button to unlock the handle.
3. Pull the grip handle to open the panel cover.
4. Slide the chassis cover towards the rear and remove the chassis cover in the direction indicated.
5. To reinstall the chassis cover reverse steps 1-4.

## 3-2 Removing and Installing the Fan Duct

Follow these instructions to remove/install the fan duct:

1. Lift up to remove the fan duct
2. To install the fan duct, align the fan duct with the guiding groove. Push down the fan duct into chassis until its firmly seat.

### 3-3 Removing and installing the Heat Sink

Read the following guidelines before you begin to remove/install the heat sink:

- Always turn off the computer and unplug the power cord from the power outlet before installing the heat sink to prevent hardware damage.
- Unplug all cables from the power outlets.
- Disconnect all telecommunication cables from their ports.
- Place the system unit on a flat and stable surface.
- Open the system according to the instructions.

#### **WARNING!**

Failure to turn off the server before you start installing components may cause serious damage. Do not attempt the procedures described in the following sections unless you are a qualified service technician.

#### **Follow these instructions to remove/install the heat sink:**

1. Loosen the captive screws securing the heat sink in place in reverse order (6→5→4→3→2→1).
2. Lift and remove the heat sink from the system.
3. To reinstall the heat sink reverse steps 1-2 while ensuring that you tighten the captive screws in sequential order (1→2→3→4→5→6) as seen in the image below.

- When installing the heat sink to CPU, use a Torx T20 screwdriver to tighten 6 captive nuts in sequence as 1-6. The screw tightening torque: 12.5-15.0 kgf-cm.
- To ensure the system operates properly, make sure the heatsink is seated on the processor firmly.

### 3-4 Installing the CPU

Read the following guidelines before you begin to install the CPU:

- Make sure that the motherboard supports the CPU.
- Always turn off the computer and unplug the power cord from the power outlet before installing the CPU to prevent hardware damage.
- Unplug all cables from the power outlets.
- Disconnect all telecommunication cables from their ports.
- Place the system unit on a flat and stable surface.
- Open the system according to the instructions.

**WARNING!**

Failure to properly turn off the server before you start installing components may cause serious damage. Do not attempt the procedures described in the following sections unless you are a qualified service technician.

**Follow these instructions to install the CPU:**

1. Loosen the captive screw securing the CPU cover.
2. Flip open the CPU cover.
3. Remove the CPU carrier from the CPU frame using the handle on the CPU carrier.
4. Using the handle on the CPU carrier insert the new CPU carrier with CPU installed into the CPU frame.

**NOTE:** Ensure the CPU is installed in the CPU carrier in the correct orientation, with the triangle on the CPU aligned to the top left corner of the CPU carrier.

5. Flip the CPU frame with CPU installed into place in the CPU socket.
6. Flip the CPU cover into place over the CPU socket.
7. Tighten the CPU cover screw to secure the CPU cover in place.

- Lock the CPU by using a Torx T20 screwdriver to tighten screw.
- The screw tightening torque: 12.5-15.0 kgf-cm.

### 3-5 Installing the Memory

Read the following guidelines before you begin to install the memory:

- Make sure that the motherboard supports the memory. It is recommended that memory of the same capacity, brand, speed, and chips be used.
- Always turn off the computer and unplug the power cord from the power outlet before installing the memory to prevent hardware damage.
- Memory modules have a foolproof design. A memory module can be installed in only one direction. If you are unable to insert the memory, switch the direction.

#### 3-5-1 Twelve Channel Memory Configuration

This motherboard provides 12 DDR5 memory slots and supports 12 Channel Technology. After the memory is installed, the BIOS will automatically detect the specifications and capacity of the memory.

### 3-5-2 Installing the Memory

Before installing a memory module, make sure to turn off the computer and unplug the power cord from the power outlet to prevent damage to the memory module.

Be sure to install DDR5 DIMMs on this motherboard.

Follow these instructions to install the Memory:

1. Insert the DIMM memory module vertically into the DIMM slot, and push it down.
2. Close the plastic clip at both edges of the DIMM slots to lock the DIMM module.
3. Reverse the installation steps when you want to remove the DIMM module.

### 3-5-3 Processor and Memory Module Matrix Table

Memory Q'ty	CPU0											
	FO	E0	D0	C0	B0	A0	G0	H0	I0	J0	K0	L0
1 DIMM						V						
2 DIMM						V	V					
4 DIMM				V		V	V		V			
6 DIMM				V	V	V	V	V	V			
8 DIMM		V		V	V	V	V	V	V		V	
10 DIMM		V	V	V	V	V	V	V	V	V	V	
12 DIMM	V	V	V	V	V	V	V	V	V	V	V	V

### 3-5-4 DIMM Population Table

EPYC Memory Speed based on DIMM Population (One DIMM per Channel)

DIMM Type	DIMM Population	Max EPYC 9004
	DIMM 0	DDR5 Frequency (MT/s)
RDIMM	1R (1 Rank)	4800
	2R (2 Ranks)	4800
3DS RDIMM	2S2R (4 Ranks)	4800
	2S4R (8 Ranks)	4800
	2S8Rx4 (16 ranks)	4800

### 3-6 Installing the PCI Expansion Card

- Voltages can be present within the server whenever an AC power source is connected. This voltage is present even when the main power switch is in the off position. Ensure that the system is powered-down and all power sources have been disconnected from the server prior to installing a PCIe card.

Failure to observe these warnings could result in personal injury or damage to equipment.

- The PCIe riser assembly does not include a riser card or any cabling as standard. To install a PCIe card, a riser card must be installed.

#### Follow these instructions for a PCI Expansion card:

1. Remove the screws and loosen the thumbscrew securing the riser bracket.
2. Lift up the riser bracket out of system.
3. Remove the screw securing the slot cover from the riser bracket.
4. Remove the slot covers from the riser bracket.
5. Orient the PCIe card with the riser guide slot and push in the direction of the arrow until the PCIe card sits in the PCIe card connector.
6. Secure the PCIe card with the screw.
7. Reverse the previous steps to install the riser bracket.

## 3-7 Installing the Mezzanine Card

### 3-7-1 OCP 3.0

Use of the following type of OCP 3.0 NIC is recommended:

- OCP 3.0 SFF with Pull Tab
- OCP 3.0 SFF with Ejector Latch

#### Follow these instructions to install an OCP 3.0 mezzanine card:

1. Remove the two screws securing the mezzanine card slot cover.
2. Remove the slot cover from the system.
3. Insert the OCP 3.0 mezzanine card into the card slot ensuring that the card is firmly connected to the connector on the motherboard.
4. Tighten the thumbnail screw to secure the OCP 3.0 mezzanine card in place.
5. Reverse the previous steps to replace the OCP 3.0 mezzanine card.

### 3-8 Installing the Hard Disk Drive

Read the following guidelines before you begin to install the HDD:

- Take note of the drive tray orientation before sliding it out.
- The tray will not fit back into the bay if inserted incorrectly.
- Make sure that the HDD is connected to the HDD connector on the backplane.

#### Follow these instructions to install a 2.5" HDD:

1. Press the release button.
2. Extend the locking lever.
3. Pull the locking lever in the direction indicated to remove the HDD tray.
4. Slide the hard disk drive into the HDD tray.
5. Reinsert the HDD tray into the slot and close the locking lever.

### 3-9 Installing the M.2 Device and Heat Sink

#### CAUTION

The position of the stand-off screw will depend on the size of the M.2 device. The stand-off screw is pre-installed for 22110 cards as standard. Refer to the size of the M.2 device and change the position of the stand-off screw accordingly.

#### WARNING:

Please ensure a heatsink is attached to any M.2 device installed into the system. Installing an M.2 device without any heatsink may result in the system overheating or system performance being throttled.

- To install/remove the M.2 module and Heatsink use a No. 1 Phillips-head screwdriver with a screw torque of  $1.5 \pm 0.2 \text{ kg}^{\ast}\text{cm}$

#### Follow these instructions to install the M.2 device and heat sink:

1. Insert the M.2 device into the M.2 connector.
2. Press down on the M.2 device.
3. Install the thermal pad of the M.2 device to the M.2 device.
4. Press down on the thermal pad.
5. Secure the M.2 device and its thermal pad to the motherboard with a single screw.
6. Reverse steps 1-2 to remove the M.2 device.

### 3-10 Replacing the Fan Assembly

- Voltages can be present within the server whenever an AC power source is connected. This voltage is present even when the main power switch is in the off position. Ensure that the system is powered-down and all power sources have been disconnected from the server prior to replacing a system fan.
- Failure to observe these warnings could result in personal injury or damage to equipment.

Follow these instructions to replace the fan assembly:

1. Pull outward the fan ear.
2. Lift up the fan assembly from the chassis.
3. Reverse the previous steps to install the replacement fan assembly.

## 3-11 Replacing the Power Supply

### CAUTION!

- In order to reduce the risk of injury from electric shock, disconnect AC power from the power supply before removing the power supply from the system

### Follow these instructions to replace the power supply:

1. Flip and then grasp the power supply handle.
2. Press the retaining clip on the top side of the power supply in the direction indicated.
3. Pull out the power supply using the handle.
4. Insert the replacement power supply firmly into the chassis. Connect the AC power cord to the replacement power supply.

### 3-12 Cable Routing

A	Front Switch/LED Cable	Motherboard: FP_1 --
B	Front USB 3 Cable	Motherboard: F_USB3 --

A	Backplane Board Signal Cable	Motherboard: BP_1
		Backplane Board: BP_1
B	Backplane Board Signal Cable	Backplane Board: BP_SERIES
		Fan Board: BP_1
C	Backplane Board Power Cable	Power Board: BP_ATX1
		Backplane Board: BP_2X3
D	Fan Board Power Cable	Power Board: P12V_BP2/ P12V_BP3
		Fan Board: 12V_BP1/ 12V_BP2
E	NVMe Cable	Motherboard: U2_P0_G2A
		Backplane Board: U.2_0/ U.2_1
F	SATA Cable	Motherboard: U2_P0_G3A
		Backplane Board: SL_SAS0

# Chapter 4 Motherboard Components

## 4-1 Motherboard Components

<b>Item</b>	<b>Description</b>
1	2 x 5 Pin ATX Power Connector
2	2 x 6 Pin ATX Power Connector
3	MCIO Connector (U2_P0_G0A/U2_P0_G0B/PCIe Gen5)
4	MCIO Connector (U2_P0_G2B/U2_P0_G2A/PCIe Gen5)
5	MCIO Connector (U2_P0_G3B/U2_P0_G3A/PCIe Gen5)
6	MCIO Connector (U2_P0_G0A/U2_P0_G0B/PCIe Gen5)
7	Front Panel USB 3.2 Gen1 Connector
8	Front Panel Connector
9	M.2 Slot (PCIe Gen3 x4, NGFF-22110)
10	HDD Backplane Board Connector
11	OCP 3.0 Connector (PCIe Gen5 x16)
12	TPM Module Connector (SPI Interface)
13	NCSI Connector
14	Riser Connector #1 (PCIe Gen5/x16 Slot)
15	Riser Connector #2 (PCIe Gen5/x16 Slot)
16	BMC Readiness LED
17	OCP 3.0 Connector (PCIe Gen5 x16)
18	System Battery

# 4-2 Jumper Setting

J1		ON	OFF
1	HSMB_SEL	BIOS defined	
2	PMBUS_SEL	BIOS defined	
3	BIOS_PWD_CLEAR	Clear supervisor password	Normal [Default]
4	BIOS_RCVR	BIOS recovery mode	Normal [Default]

# 4-3 Backplane Board Storage Connector

## 4-3-1 CBP2022

Item	Description
1	SlimLine Connector (SFF-8654 4i/U_2_0)
2	SlimLine Connector (SFF-8654 4i/U_2_1)
3	SlimLine Connector (SFF-8654 4i/SL_SAS0)

## Chapter 5 BIOS Setup

BIOS (Basic Input and Output System) records hardware parameters of the system in the EFI on the motherboard. Its major functions include conducting the Power-On Self-Test (POST) during system startup, saving system parameters, loading the operating system etc. The BIOS includes a BIOS Setup program that allows the user to modify basic system configuration settings or to activate certain system features. When the power is turned off, the battery on the motherboard supplies the necessary power to the CMOS to keep the configuration values in the CMOS.

To access the BIOS Setup program, press the <DEL> key during the POST when the power is turned on.

- BIOS flashing is potentially risky, if you do not encounter any problems when using the current BIOS version, it is recommended that you don't flash the BIOS. To flash the BIOS, do it with caution. Inadequate BIOS flashing may result in system malfunction.
- It is recommended that you not alter the default settings (unless you need to) to prevent system instability or other unexpected results. Inadequately altering the settings may result in system's failure to boot. If this occurs, try to clear the CMOS values and reset the board to default values. (Refer to the **Exit** section in this chapter or introductions of the battery/clearing CMOS jumper in Chapter 4 for how to clear the CMOS values.)

### BIOS Setup Program Function Keys

<<-><->>	Move the selection bar to select the screen
<↑><↓>	Move the selection bar to select an item
<+>	Increase the numeric value or make changes
<->	Decrease the numeric value or make changes
<Enter>	Execute command or enter the submenu
<Esc>	Main Menu: Exit the BIOS Setup program Submenus: Exit current submenu
<F1>	Show descriptions of general help
<F3>	Restore the previous BIOS settings for the current submenus
<F9>	Load the Optimized BIOS default settings for the current submenus
<F10>	Save all the changes and exit the BIOS Setup program

- **Main**

This setup page includes all the items of the standard compatible BIOS.

- **Advanced**

This setup page includes all the items of AMI BIOS special enhanced features.

(ex: Auto detect fan and temperature status, automatically configure hard disk parameters.)

- **AMD CBS**

This setup page includes the common items for configuration of AMD motherboard-related information.

- **AMD PBS Option**

This setup page includes the common items for configuration of AMD CPM RAS related settings.

- **Chipset**

This setup page includes all the submenu options for configuring the functions of the North Bridge.

- **Server Management**

Server additional features enabled/disabled setup menus.

- **Security**

Change, set, or disable supervisor and user password. Configuration supervisor password allows you to restrict access to the system and BIOS Setup.

A supervisor password allows you to make changes in BIOS Setup.

A user password only allows you to view the BIOS settings but not to make changes.

- **Boot**

This setup page provides items for configuration of the boot sequence.

- **Save & Exit**

Save all the changes made in the BIOS Setup program to the CMOS and exit BIOS Setup. (Pressing <F10> can also carry out this task.)

Abandon all changes and the previous settings remain in effect. Pressing <Y> to the confirmation message will exit BIOS Setup. (Pressing <Esc> can also carry out this task.)

# 5-1 The Main Menu

Once you enter the BIOS Setup program, the Main Menu (as shown below) appears on the screen. Use arrow keys to move among the items and press <Enter> to accept or enter other sub-menu.

## Main Menu Help

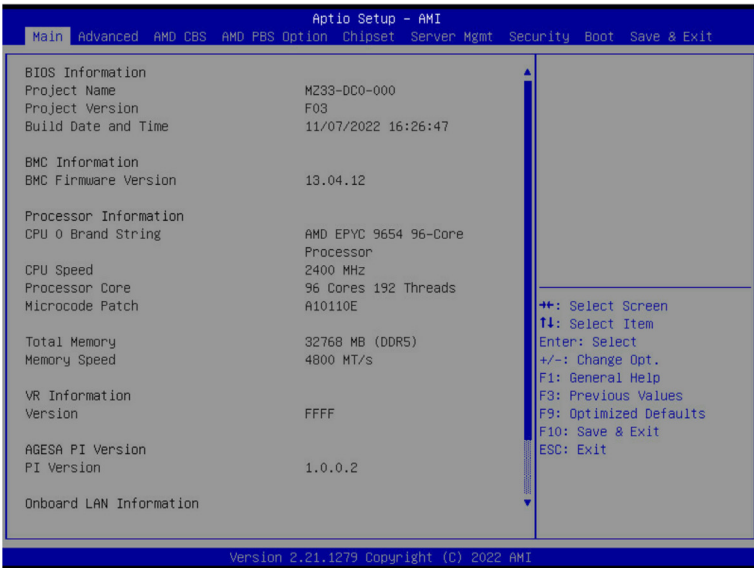

The on-screen description of a highlighted setup option is displayed on the bottom line of the Main Menu.

## Submenu Help

While in a submenu, press <F1> to display a help screen (General Help) of function keys available for the menu. Press <Esc> to exit the help screen. Help for each item is in the Item Help block on the right side of the submenu.

- When the system is not stable as usual, select the **Restore Defaults** item to set your system to its defaults.
- The BIOS Setup menus described in this chapter are for reference only and may differ by BIOS version.

Parameter	Description
BIOS Information	
Project Name	Displays the project name information.
Project Version	Displays version number of the BIOS setup utility.
Build Date and Time	Displays the date and time when the BIOS setup utility was created.
BMC Information <sup>(Note1)</sup>	
BMC Firmware Version <sup>(Note1)</sup>	Displays BMC firmware version information.
Processor Information	
CPU Brand String / CPU Speed / Processor Core / Microcode Patch	Displays the technical specifications for the installed processor(s).
Total Memory <sup>(Note2)</sup>	Displays the total memory size of the installed memory.
Memory Speed <sup>(Note2)</sup>	Displays the frequency information of the installed memory.
VR Information Version	Displays VR version information.
AGESA PI Version	
PI Version	Displays AGESA PI version information.

(Note1) Functions available on selected models.

(Note2) This section will display capacity and frequency information of the memory that the customer has installed.

Parameter	Description
Onboard LAN Information	
LAN1 MAC Address <sup>(Note)</sup>	Displays LAN MAC address information.
System Date	Sets the date following the weekday-month-day-year format.
System Time	Sets the system time following the hour-minute-second format.

(Note) The number of LAN ports listed will depend on the motherboard / system model.

---

# 5-2 Advanced Menu

The Advanced Menu displays submenu options for configuring the function of various hardware components. Select a submenu item, then press <Enter> to access the related submenu screen.

## When Boot Mode Select is set to UEFI (Default)

When "Boot Mode Select" is set to Legacy in the Boot > Boot Mode Select section

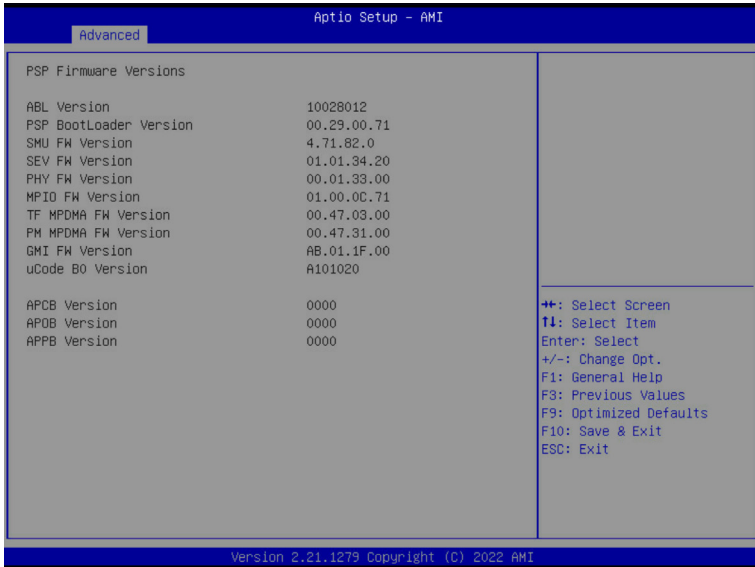

## 5-2-1 Trusted Computing

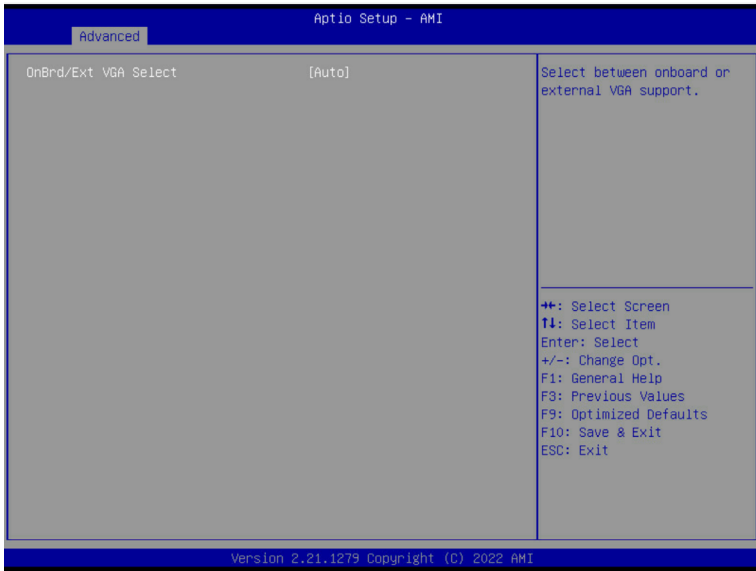

Parameter	Description
Configuration	
Security Device Support	<p>Enable/Disable BIOS support for security device. OS will not show security device. TCG EFI protocol and INT1A interface will not be available.</p> <p>Options available: Disable, Enable. Default setting is <b>Enable</b>.</p>
SPI TPM Support	<p>Select Enable to activate TPM support feature.</p> <p>Options available: Disabled, Enabled. Default setting is <b>Disabled</b>.</p>

## 5-2-2 PSP Firmware Versions

The PSP Firmware Versions page displays the basic PSP firmware version information. Items on this window are non-configurable.

### 5-2-3 Legacy Video Select

Parameter	Description
OnBrd/Ext VGA Select	Selects between onboard or external VGA support. Options available: Auto, Onboard, External. Default setting is <b>Auto</b> .

(Note) This configurable option will be displayed when **"Boot Mode Select"** is set to **Legacy** in the **Boot > Boot Mode Select** section.

## 5-2-4 AST2600 Super IO Configuration

Parameter	Description
AST2600 Super IO Configuration	
Super IO Chip	Displays the super IO chip information
Serial Port 1 Configuration	Press [Enter] for configuration of advanced items.

## 5-2-4-1 Serial Port 1 Configuration

Parameter	Description
Serial Port 1 Configuration	
Serial Port <sup>(Note)</sup>	Enable/Disable the Serial Port (COM). When set to Enabled allows you to configure the Serial port 1 settings. When set to Disabled, displays no configuration for the serial port. Options available: Disabled, Enabled. Default setting is <b>Enabled</b> .
Devices Settings	Displays the Serial Port 1 device settings.
Change Settings	Select an optimal settings for Super IO Device. Options available for Serial Port 1: Auto IO=3F8h; IRQ=4; IO=3F8h; IRQ=3, 4, 5, 6, 7, 9, 10, 11, 12; IO=2F8h; IRQ=3, 4, 5, 6, 7, 9, 10, 11, 12; IO=3E8h; IRQ=3, 4, 5, 6, 7, 9, 10, 11, 12; IO=2E8h; IRQ=3, 4, 5, 6, 7, 9, 10, 11, 12; Default setting is <b>Auto</b> .

(Note) Advanced items prompt when this item is defined.

## 5-2-5 S5 RTC Wake Settings

Parameter	Description
Wake System from S5	Enable/Disable system wake on alarm event. Options available: Disabled, Fixed Time, Dynamic Time. When Fixed Time is selected, system will wake on the hr::min::sec specified. Default setting is <b>Disabled</b> .

## 5-2-6 Serial Port Console Redirection

Parameter	Description
COM1/Serial Over LAN Console Redirection <sup>(Note)</sup>	<p>Select whether to enable console redirection for specified device. Console redirection enables the users to manage the system from a remote location.</p> <p>Options available: Enabled, Disabled. Default setting is <b>Disabled</b>.</p>
COM1/Serial Over LAN Console Redirection Settings	<p>Press [Enter] to configure advanced items.</p> <p><b>Please note that this item is configurable when COM1/Serial Over LAN Console Redirection is set to Enabled.</b></p> <ul style="list-style-type: none"> <li>◆ Terminal Type <ul style="list-style-type: none"> <li>– Selects a terminal type to be used for console redirection.</li> <li>– Options available: VT100, VT100+, ANSI, VT-UTF8. Default setting is <b>ANSI</b>.</li> </ul> </li> <li>◆ Bits per second <ul style="list-style-type: none"> <li>– Selects the transfer rate for console redirection.</li> <li>– Options available: 9600, 19200, 38400, 57600, 115200. Default setting is <b>115200</b>.</li> </ul> </li> <li>◆ Data Bits <ul style="list-style-type: none"> <li>– Selects the number of data bits used for console redirection.</li> <li>– Options available: 7, 8. Default setting is <b>8</b>.</li> </ul> </li> </ul>

(Note) Advanced items prompt when this item is defined.

Parameter	Description
COM1/Serial Over LAN Console Redirection Settings (continued)	<ul style="list-style-type: none"> <li>◆ Parity <ul style="list-style-type: none"> <li>– A parity bit can be sent with the data bits to detect some transmission errors.</li> <li>– Even: parity bit is 0 if the num of 1's in the data bits is even.</li> <li>– Odd: parity bit is 0 if num of 1's in the data bits is odd.</li> <li>– Mark: parity bit is always 1. Space: Parity bit is always 0.</li> <li>– Mark and Space Parity do not allow for error detection.</li> <li>– Options available: None, Even, Odd, Mark, Space. Default setting is <b>None</b>.</li> </ul> </li> <li>◆ Stop Bits <ul style="list-style-type: none"> <li>– Stop bits indicate the end of a serial data packet. (A start bit indicates the beginning). The standard setting is 1 stop bit. Communication with slow devices may require more than 1 stop bit.</li> <li>– Options available: 1, 2. Default setting is <b>1</b>.</li> </ul> </li> <li>◆ Flow Control <ul style="list-style-type: none"> <li>– Flow control can prevent data loss from buffer overflow. When sending data, if the receiving buffers are full, a 'stop' signal can be sent to stop the data flow. Once the buffers are empty, a 'start' signal can be sent to re-start the flow. Hardware flow control uses two wires to send start/stop signals.</li> <li>– Options available: None, Hardware RTS/CTS. Default setting is <b>None</b>.</li> </ul> </li> <li>◆ VT-UTF8 Combo Key Support <ul style="list-style-type: none"> <li>– Enable/Disable the VT-UTF8 Combo Key Support.</li> <li>– Options available: Enabled, Disabled. Default setting is <b>Enabled</b>.</li> </ul> </li> <li>◆ Recorder Mode <ul style="list-style-type: none"> <li>– When this mode enabled, only texts will be send. This is to capture Terminal data.</li> <li>– Options available: Enabled, Disabled. Default setting is <b>Disabled</b>.</li> </ul> </li> <li>◆ Resolution 100x31 <ul style="list-style-type: none"> <li>– Enable/Disable extended terminal resolution.</li> <li>– Options available: Enabled, Disabled. Default setting is <b>Enabled</b>.</li> </ul> </li> <li>◆ Putty KeyPad <ul style="list-style-type: none"> <li>– Selects Function Key and KeyPad on Putty.</li> <li>– Options available: VT100, LINUX, XTERMR6, SC0, ESCN, VT400. Default setting is <b>VT100</b>.</li> </ul> </li> </ul>

Parameter	Description
Legacy Console Redirection	
Legacy Console Redirection Settings	<p>Press [Enter] to configure advanced items.</p> <ul style="list-style-type: none"> <li>◆ Redirection COM Port <ul style="list-style-type: none"> <li>– Selects a COM port for Legacy serial redirection.</li> <li>– Default setting is <b>COM1/SOL</b>.</li> </ul> </li> <li>◆ Resolution <ul style="list-style-type: none"> <li>– Selects the number of rows and columns used in Console Redirection for legacy OS support.</li> <li>– Options available: 80x24, 80x25. Default setting is <b>80x24</b>.</li> </ul> </li> <li>◆ Redirect After POST <ul style="list-style-type: none"> <li>– When Bootloader is selected, then Legacy Console Redirection is disabled before booting to legacy OS. When Always Enable is selected, then Legacy Console Redirection is enabled for legacy OS.</li> <li>– Options available: Always Enable, BootLoader. Default setting is <b>Always Enable</b>.</li> </ul> </li> </ul>
Serial Port for Out-of-Band Management / Windows Emergency Management Services (EMS) Console Redirection <sup>(Note)</sup>	<p>EMS console redirection allows the user to configure Console Redirection Settings to support Out-of-Band Serial Port management.</p> <p>Options available: Disabled, Enabled. Default setting is <b>Disabled</b>.</p>
Serial Port for Out-of-Band EMS Console Redirection Settings	<p>Press [Enter] to configure advanced items.</p> <p><b>Please note that this item is configurable when Serial Port for Out-of-Band Management EMS Console Redirection is set to Enabled.</b></p> <ul style="list-style-type: none"> <li>◆ Out-of-Band Mgmt Port <ul style="list-style-type: none"> <li>– Microsoft Windows Emergency Management Service (EMS) allows for remote management of a Windows Server OS through a serial port.</li> <li>– Default setting is <b>COM1/SOL</b>.</li> </ul> </li> <li>◆ Terminal Type <ul style="list-style-type: none"> <li>– Selects a terminal type to be used for console redirection.</li> <li>– Options available: VT100, VT100+, ANSI, VT-UTF8. Default setting is <b>ANSI</b>.</li> </ul> </li> <li>◆ Bits per second <ul style="list-style-type: none"> <li>– Selects the transfer rate for console redirection.</li> <li>– Options available: 9600, 19200, 57600, 115200. Default setting is <b>115200</b>.</li> </ul> </li> </ul>

(Note) Advanced items prompt when this item is defined.

Parameter	Description
Serial Port for Out-of-Band EMS Console Redirection Settings(continued)	<ul style="list-style-type: none"><li>◆ Flow Control<ul style="list-style-type: none"><li>– Flow control can prevent data loss from buffer overflow. When sending data, if the receiving buffers are full, a 'stop' signal can be sent to stop the data flow. Once the buffers are empty, a 'start' signal can be sent to re-start the flow. Hardware flow control uses two wires to send start/stop signals.</li><li>– Options available: None, Hardware RTS/CTS, Software Xon/Xoff. Default setting is <b>None</b>.</li></ul></li></ul>

## 5-2-7 CPU Configuration

Parameter	Description
SVM Mode	Enable/Disable the CPU Virtualization. Options available: Disabled, Enabled. Default setting is <b>Enabled</b> .
CPU 0 Information	Press [Enter] to view the memory information related to CPU 0.

## 5-2-8 PCI Subsystem Settings

Aptio Setup - AMI

Version 2.21.1279 Copyright (C) 2022 AMI

Parameter	Description
PCI Bus Driver Version	Displays the PCI Bus Driver version information.
SLOT# <sup>(Note1)</sup>	Change the PCIe lanes. Options available: Disabled, Auto, x16, x8x8, x8x4x4, x4x4x8, x4x4x4x4. Default setting is <b>Auto</b> .
SLOT #_I/O ROM <sup>(Note1)</sup>	When enabled, this setting will initialize the device expansion ROM for the related PCI-E slot. Options available: Disabled, Enabled. Default setting is <b>Enabled</b> .
SLOT #_Link Speed <sup>(Note1)</sup>	Configure PCIe max link speed. Options available: Auto, Gen5, Gen4, Gen3, Gen2, Gen1. Default setting is <b>Auto</b> .
OCP# <sup>(Note2)</sup>	Change OCP PCIe lanes. Options available: Disabled, Auto, x16, x8x8, x8x4x4, x4x4x8, x4x4x4x4. Default setting is <b>Auto</b> .
OCP# I/O ROM <sup>(Note2)</sup>	When enabled, this setting will initialize the device expansion ROM for the related devices. Options available: Disabled, Enabled. Default setting is <b>Enabled</b> .
OCP# Link Speed <sup>(Note2)</sup>	Configure OCP slot max link speed. Options available: Auto, Gen5, Gen4, Gen3, Gen2, Gen1. Default setting is <b>Auto</b> .
U2_P0_G0/1/2	Change MCIO PCIe lanes. Options available: Disabled, Auto, x16, x8x8, x8x4x4, x4x4x8, x4x4x4x4. Default setting is <b>Auto</b> .
U2_P0_G0/1/2/3 I/O ROM	When enabled, this setting will initialize the device expansion ROM for the related devices. Options available: Disabled, Enabled. Default setting is <b>Enabled</b> .
U2_P0_G0/1/2 Link Speed	Configure MCIO PCIe max link speed. Options available: Auto, Gen5, Gen4, Gen3, Gen2, Gen1. Default setting is <b>Auto</b> .
U2_P0_G3, root port 2/3/4	Enable/Disable U2_P0_G3, root port 2/3/4. Options available: Disabled, Enabled. Default setting is <b>Enabled</b> .
Onboard LAN Controller <sup>(Note3)</sup>	Enable/Disable the onboard LAN devices. Options available: Disabled, Enabled. Default setting is <b>Enabled</b> .
Onboard LAN# I/O ROM <sup>(Note3)</sup>	Enable/Disable the onboard LAN devices, and initializes device expansion ROM. Options available: Disabled, Enabled. Default setting is <b>Enabled</b> .
PCI Devices Common Settings	
Above 4G Decoding	Enable/Disable memory mapped I/O to 4GB or greater address space (Above 4G Decoding). Options available: Disabled, Enabled. Default setting is <b>Enabled</b> .

(Note1) This section is dependent on the available PCIe Slot.

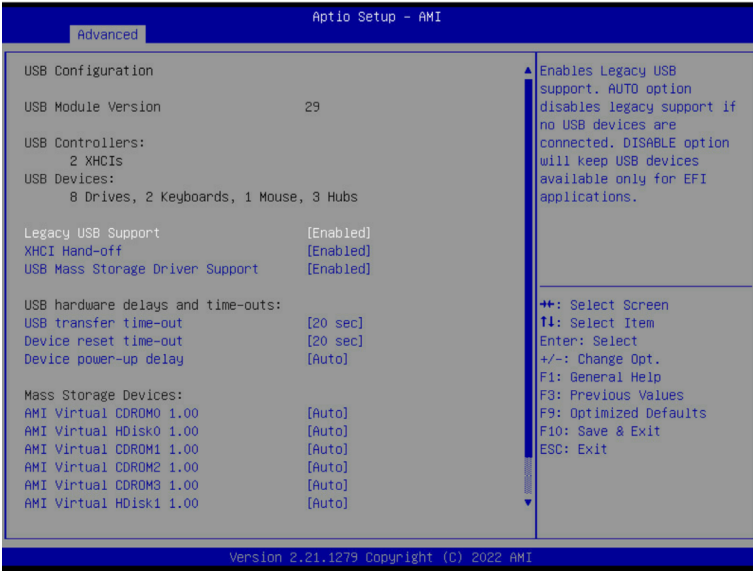

(Note2) This section is dependent on the available OCP connector.

(Note3) This section is dependent on the available LAN controller.

Parameter	Description
SR-IOV Support	If the system has SR-IOV capable PCIe devices, this item Enable/Disable Single Root IO Virtualization Support. Options available: Disabled, Enabled. Default setting is <b>Enabled</b> .
Relaxed Ordering	Enable/Disable PCI express device relaxed ordering. Options available: Disabled, Enabled. Default setting is <b>Enabled</b> .

## 5-2-9 USB Configuration

Parameter	Description
USB Configuration	
USB Module Version	Displays the USB module version information.
USB Controllers	Displays the supported USB controllers.
USB Devices:	Displays the USB devices connected to the system.
Legacy USB Support	Enable/Disable the Legacy USB support function. AUTO option disables legacy support if no USB devices are connected. DISABLE option will keep USB devices available only for EFI applications. Options available: Enabled, Disabled, Auto. Default setting is <b>Enabled</b> .
XHCI Hand-off	Enable/Disable the XHCI Hand-off support. Options available: Enabled, Disabled. Default setting is <b>Enabled</b> .
USB Mass Storage Driver Support <sup>(Note)</sup>	Enable/Disable the USB Mass Storage Driver Support. Options available: Disabled, Enabled. Default setting is <b>Enabled</b> .
USB hardware delays and time-outs	
USB transfer time-out	Selects the time-out value for USB Control/Bulk/Interrupt transfers. Options available: 1 sec, 5 sec, 10 sec, 20 sec. Default setting is <b>20 sec</b> .

(Note) This item is present only if you attach USB devices.

Parameter	Description
Device reset time-out	Selects the time-out value during a USB mass storage device reset. Options available: 10 sec, 20 sec, 30 sec, 40 sec. Default setting is <b>20 sec</b> .
Device power-up delay	Maximum time the device will take before it properly reports itself to the Host Controller. "Auto" uses default value: for a Root port it is 100 ms, for a Hub port the delay is taken from Hub descriptor. Options available: Auto, Manual. Default setting is <b>Auto</b> .
Mass Storage Devices	Displays the mass storage devices available on the system.

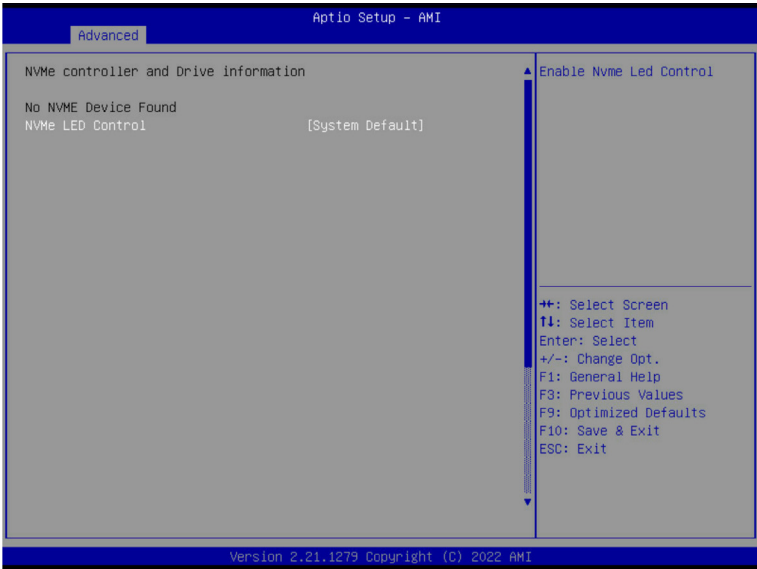

## 5-2-10 Network Stack Configuration

Parameter	Description
Network Stack	Enable/Disable the UEFI network stack. Options available: Enabled, Disabled. Default setting is <b>Enabled</b> .
Ipv4 PXE Support <sup>(Note)</sup>	Enable/Disable the Ipv4 PXE feature. Options available: Enabled, Disabled. Default setting is <b>Enabled</b> .
Ipv4 HTTP Support <sup>(Note)</sup>	Enable/Disable the Ipv4 HTTP feature. Options available: Enabled, Disabled. Default setting is <b>Disabled</b> .
Ipv6 PXE Support <sup>(Note)</sup>	Enable/Disable the Ipv6 PXE feature. Options available: Enabled, Disabled. Default setting is <b>Enabled</b> .
Ipv6 HTTP Support <sup>(Note)</sup>	Enable/Disable the Ipv6 HTTP feature. Options available: Enabled, Disabled. Default setting is <b>Disabled</b> .
PXE boot wait time <sup>(Note)</sup>	Wait time in seconds to press ESC key to abort the PXE boot. Press the <+> / <-> keys to increase or decrease the desired values.
Media detect count <sup>(Note)</sup>	Number of times the presence of media will be checked. Press the <+> / <-> keys to increase or decrease the desired values.

(Note) This item appears when **Network Stack** is set to **Enabled**.

## 5-2-11 NVMe Configuration

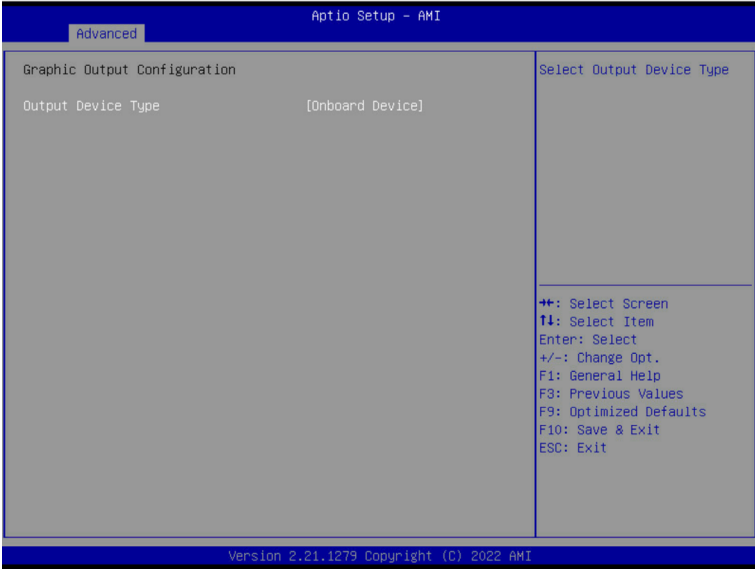

Parameter	Description
NVMe Configuration	Displays the NVMe devices connected to the system.
NVMe LED Control	Enable/Disable NVMe LED Control. Options available: System Default, Disabled, Enabled. Default setting is <b>Enabled</b> .

## 5-2-12 SATA Configuration

Parameter	Description
SATA Configuration	Displays the installed HDD devices information. System will automatically detect HDD type.

### 5-2-13 Graphic Output Configuration

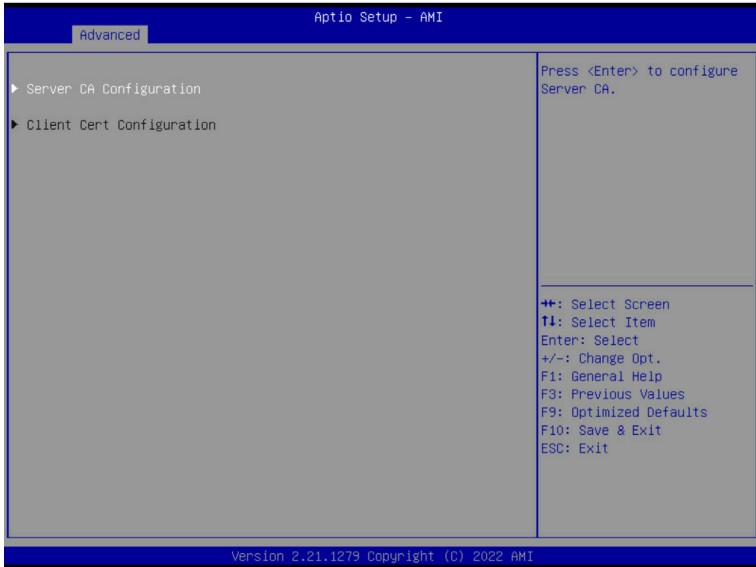

Parameter	Description
Output Device Type	Selects output device type. Options available: First loaded Device, Onboard Device, External Device, Specific Device. Default setting is <b>Onboard Device</b> .

## 5-2-14 AMD Mem Configuration Status

Parameter	Description
CPU 0	Press [Enter] to view the memory configuration status related to CPU 0.

## 5-2-15 Tls Auth Configuration

Parameter	Description
Server CA Configuration	<p>Press [Enter] for configuration of advanced items.</p> <ul style="list-style-type: none"> <li>◆ Enroll Cert                             <ul style="list-style-type: none"> <li>– Press [Enter] to enroll a certificate                                     <ul style="list-style-type: none"> <li>• Enroll Cert Using File</li> <li>• Cert GUID</li> </ul> </li> <li>Input digit character in 1111111-2222-3333-4444-1234567890ab format.</li> <li>– Commit Changes and Exit</li> <li>– Discard Changes and Exit</li> </ul> </li> <li>◆ Delete Cert</li> </ul>
Client Cert Configuration	Press [Enter] for configuration of advanced items.

## 5-2-16 RAM Disk Configuration

Parameter	Description
Disk Memory Type	Specifies the type of memory to use from available memory pool in system to create a disk. Options available: Boot Service Data, Reserved. Default setting is <b>Boot Service Data</b> .
Create Raw	Creates a raw RAM disk. <ul style="list-style-type: none"> <li>◆ Size (Hex) <ul style="list-style-type: none"> <li>– Input a valid RAM disk size that should be multiple of the RAM disk block size.</li> </ul> </li> <li>◆ Create &amp; Exit</li> <li>◆ Discard &amp; Exit</li> </ul>
Create from file	Creates a RAM disk from a given file.
Created RAM disk list	
Remove selected RAM disk(s)	Selects the RAM disk(s) to remove.

## 5-2-17 iSCSI Configuration

Parameter	Description
iSCSI Initiator Name	Press [Enter] and name iSCSI Initiator. Only IQN format is accepted. Range: from 4 to 223
Add an Attempt	Press [Enter] to configure advanced items.
Delete Attempts	Press [Enter] to configure advanced items.
Change Attempt Order	Press [Enter] to configure advanced items.

## 5-2-18 Intel(R) I210 Gigabit Network Connection

Aptio Setup - AMI

Advanced

▶ NIC Configuration		Click to configure the network device port.
Blink LEDs	0	
UEFI Driver	Intel(R) PRO/1000 8.5.21 PCI-E	
Adapter PBA	211018-008	
Device Name	Intel(R) I210 Gigabit Network Connection	
Chip Type	Intel i210	
PCI Device ID	1533	
PCI Address	C7:00:00	
Link Status	[Disconnected]	++: Select Screen ↑↓: Select Item Enter: Select +/-: Change Opt. F1: General Help F3: Previous Values F9: Optimized Defaults F10: Save & Exit ESC: Exit
MAC Address	D8:5E:D3:E9:C3:A6	
Virtual MAC Address	00:00:00:00:00:00	

Version 2.21.1279 Copyright (C) 2022 AMI

Aptio Setup - AMI

Advanced

Link Speed	[Auto Negotiated]	Specifies the port speed used for the selected boot protocol.
Wake On LAN	[Enabled]	
		++: Select Screen ↑↓: Select Item Enter: Select +/-: Change Opt. F1: General Help F3: Previous Values F9: Optimized Defaults F10: Save & Exit ESC: Exit

Version 2.21.1279 Copyright (C) 2022 AMI

Parameter	Description
NIC Configuration	<p>Press [Enter] to configure advanced items.</p> <ul style="list-style-type: none"> <li>◆ Link Speed <ul style="list-style-type: none"> <li>– Allows for automatic link speed adjustment.</li> <li>– Options available: Auto Negotiated, 10 Mbps Half, 10 Mbps Full, 100 Mbps Half, 100 Mbps Full. Default setting is <b>Auto Negotiated</b>.</li> </ul> </li> <li>◆ Wake On LAN <ul style="list-style-type: none"> <li>– Enables power on of the system via LAN. Note that configuring Wake on LAN in the operating system does not change the value of this setting, but does override the behavior of Wake on LAN in OS controlled power states.</li> <li>– Options available: Disabled, Enabled. Default setting is <b>Enabled</b>.</li> </ul> </li> </ul>
Blink LEDs	<p>Identifies the physical network port by blinking the associated LED. Press the numeric keys to adjust desired values.</p>
UEFI Driver	Displays the technical specifications for the Network Interface Controller.
Adapter PBA	Displays the technical specifications for the Network Interface Controller.
Device Name	Displays the technical specifications for the Network Interface Controller.
Chip Type	Displays the technical specifications for the Network Interface Controller.
PCI Device ID	Displays the technical specifications for the Network Interface Controller.
PCI Address	Displays the technical specifications for the Network Interface Controller.
Link Status	Displays the technical specifications for the Network Interface Controller.
MAC Address	Displays the technical specifications for the Network Interface Controller.
Virtual MAC Address	Displays the technical specifications for the Network Interface Controller.

## 5-2-19 VLAN Configuration

Parameter	Description
Enter Configuration Menu	<p>Press [Enter] to configure advanced items.</p> <ul style="list-style-type: none"> <li>◆ Create new VLAN</li> <li>◆ VLAN ID               <ul style="list-style-type: none"> <li>– Sets VLAN ID for a new VLAN or an existing VLAN.</li> <li>– Press the &lt;+&gt; / &lt;-&gt; keys to increase or decrease the desired values.</li> <li>– The valid range is from 0 to 4094.</li> </ul> </li> <li>◆ Priority               <ul style="list-style-type: none"> <li>– Sets 802.1Q Priority for a new VLAN or an existing VLAN.</li> <li>– Press the &lt;+&gt; / &lt;-&gt; keys to increase or decrease the desired values.</li> <li>– The valid range is from 0 to 7.</li> </ul> </li> <li>◆ Add VLAN               <ul style="list-style-type: none"> <li>– Press [Enter] to create a new VLAN or update an existing VLAN.</li> </ul> </li> <li>◆ Configured VLAN List</li> <li>◆ Remove VLAN               <ul style="list-style-type: none"> <li>– Press [Enter] to remove an existing VLAN.</li> </ul> </li> </ul>

## 5-2-20 MAC IPv4 Network Configuration

Parameter	Description
Configured	Indicates whether network address is configured successfully or not. Options available: Enabled, Disabled. Default setting is <b>Disabled</b> .
Enable DHCP <sup>(Note)</sup>	Options available: Enabled, Disabled. Default setting is <b>Disabled</b> .
Local IP Address <sup>(Note)</sup>	Press [Enter] to configure local IP address.
Local NetMask <sup>(Note)</sup>	Press [Enter] to configure local NetMask.
Local Gateway <sup>(Note)</sup>	Press [Enter] to configure local Gateway
Local DNS Servers <sup>(Note)</sup>	Press [Enter] to configure local DNS servers
Save Changes and Exit	Press [Enter] to save all configurations.

(Note) This item appears when **Configured** is set to **Enabled**.

## 5-2-21 MAC IPv6 Network Configuration

Parameter	Description
Enter Configuration Menu	<p>Press [Enter] to configure advanced items.</p> <ul style="list-style-type: none"> <li>◆ Displays the MAC Address information.</li> <li>◆ Interface ID <ul style="list-style-type: none"> <li>– The 64 bit alternative interface ID for the device. The string is colon separated. e.g. ff:dd:88:66:cc:1:2:3.</li> </ul> </li> <li>◆ DAD Transmit Count <ul style="list-style-type: none"> <li>– The number of consecutive Neighbor solicitation messages sent while performing Duplicate Address Detection on a tentative address. A value of zero indicates that Duplicate Address Detection is not performed.</li> </ul> </li> <li>◆ Policy <ul style="list-style-type: none"> <li>– Options available: automatic, manual. Default setting is <b>automatic</b>.</li> </ul> </li> <li>◆ Save Changes and Exit <ul style="list-style-type: none"> <li>– Press [Enter] to save all configurations.</li> </ul> </li> </ul>

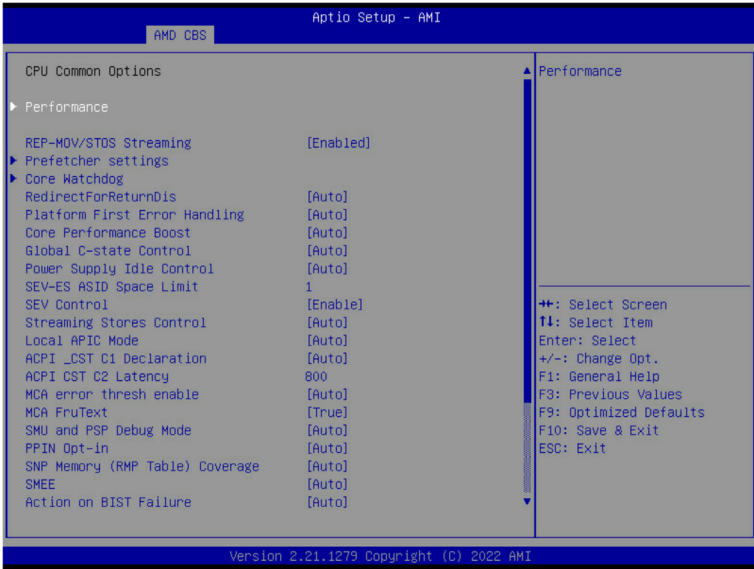

### 5-3 AMD CBS Menu

AMD CBS menu displays submenu options for configuring the CPU-related information that the BIOS automatically sets. Select a submenu item, then press [Enter] to access the related submenu screen.

### 5-3-1 CPU Common Options

Parameter	Description
CPU Common Options	
Performance	Press [Enter] for configuration of advanced items.
REP-MOV/STOS Streaming	Allow REP-MOV/STOS to use non-caching streaming stores for large sizes. Options available: Disabled, Enabled. Default setting is <b>Enabled</b> .
Prefetcher settings	Press [Enter] for configuration of advanced items.
Core Watchdog	Press [Enter] for configuration of advanced items.
RedirectForReturnDis	From a workaround for GCC/C000005 issue for XV Core on CZ A0, setting MSRC001_1029 Decode Configuration (DE_CFG) bit 14 [DecfgNoRdrctForReturns] to 1. Options available: Auto, 1, 0. Default setting is <b>Auto</b> .
Platform First Error Handling	Enable/Disable PFEH, cloak individual banks, and mask deferred error interrupts from each bank. Options available: Enabled, Disabled, Auto. Default setting is <b>Auto</b> .
Core Performance Boost	Enable/Disable the Core Performance Boost function. Options available: Disabled, Auto. Default setting is <b>Auto</b> .
Global C-state Control	Controls the IO based C-state generation and DF C-states. Options available: Disabled, Enabled, Auto. Default setting is <b>Auto</b> .
Power Supply Idle Control	Configures the Power Supply Idle Control. Options available: Low Current Idle, Typical Current Idle, Auto. Default setting is <b>Auto</b> .
SEV-ES ASID Space Limit	Configures the Space limit for SEV-ES ASIDs. Default setting is <b>1</b> .
SEV Control	Enable/Disable SEV control. Options available: Enable, Disable. Default setting is <b>Enable</b> .
Streaming Stores Control	Enable/Disable the Streaming Stores functionality. Options available: Disabled, Enabled, Auto. Default setting is <b>Auto</b> .
Local APIC Mode	Sets the Local APIC Mode. Options available: Compatibility, xAPIC, x2APIC, Auto. Default setting is <b>Auto</b> .
ACPI_CST C1 Declaration	Determines whether or not to declare the C1 state to the OS.. Options available: Disabled, Enabled, Auto. Default setting is <b>Auto</b> .
ACPI CST C2 Latency	Enter a value for ACPI CST C2 Latency.
MCA error thresh enable	Enable MCA error thresholding. Options available: False, True, Auto. Default setting is <b>True</b> .
MCA FruText	Enable MCA FruText. Options available: False, True. Default setting is <b>True</b> .
SMU and PSP Debug Mode	When this option is enabled, specific uncorrected errors detected by the PSP FW or SMU FW will hand and not reset the system. Options available: Disabled, Enabled, Auto. Default setting is <b>Auto</b> .
PPIN Opt-in	Enable/Disable the PPIN feature. Options available: Disabled, Enabled, Auto. Default setting is <b>Auto</b> .

Parameter	Description
SNP Memory (RMP Table) Coverage	Enabled: Enter system memory is covered. Options available: Disabled, Enabled, Custom, Auto. Default setting is <b>Auto</b> .
SMEE	Controls the Secure Memory Encryption Enable (SMEE) function. Options available: Disable, Enable, Auto. Default setting is <b>Auto</b> .
Action on BIST Failure	Action to take when a CCD BIST failure is detected. Options available: Do nothing, Down-CCD, Auto. Default setting is <b>Auto</b> .
Enhanced REP MOVSB/STOSB (ERMSB)	Options available: Disabled, Enabled, Auto. Default setting is <b>Auto</b> .
Log Transparent Errors	Enable/Disable the log Transparent errors function. Options available: Auto, Disabled, Enabled. Default setting is <b>Auto</b> .
AVX512	Enable/Disable AVX512. Options available: Disabled, Enabled, Auto. Default setting is <b>Auto</b> .
MONITOR and MWAIT disable	The MONITOR, MWAIT, MONITORX and MWAITX opcodes become invalid when enabled. Options available: Enabled, Disabled, Auto. Default setting is <b>Auto</b>
Small Hammer Configuration	Options available: Disabled, Enabled, Auto. Default setting is <b>Auto</b> .
Corrector Branch Predictor	Options available: Disable, Enable. Default setting is <b>Disable</b> .
PAUSE Delay	Number a cycles thread will be idle after a PAUSE instruction. Options available: Auto, Disable, 16 cycles, 32 cycles, 64 cycles, 128 cycles. Default setting is <b>Auto</b> .
CPU Speculative Store Modes	Select the CPU speculative store modes. Options available: Balanced, More Speculative, Less Speculative, Auto. Default setting is <b>Auto</b> .

### 5-3-1-1 Performance

Parameter	Description
Performance	
OC Mode <sup>(Notes)</sup>	Options available: Normal Operation, Customized. Default setting is <b>Normal Operation</b> .
Custom Core Pstates	Allows you to accept or decline enabling Custom Core Pstates. When accepted, you can disable or customize core pstates.
CCD/Core/Thread Enablement	Allows you to accept or decline enabling CCDs, processor cores and threads. When accepted, you can control the number of CCDs to be used, and the number of cores to be used. <ul style="list-style-type: none"> <li>◆ CCD Control <ul style="list-style-type: none"> <li>– Options available: Auto, 2 CCDs, 4 CCDs, 6 CCDs, 8 CCDs, 10 CCDs. Default setting is <b>Auto</b>.</li> </ul> </li> <li>◆ Core Control <ul style="list-style-type: none"> <li>– Options available: Auto, ONE(1+0), TWO(2+0), THREE(3+0), FOUR(4+0), FIVE(5+0), SIX(6+0), SEVEN(7+0).</li> <li>– Default setting is <b>Auto</b>.</li> </ul> </li> </ul>
SMT Control	Can be used to disable symmetric multithreading. To re-enable SMT, a POWER CYCLE is needed after select the 'Enable' option. Select 'Auto' base on BIOS PCD. (PcdAmdSmtMode) default setting. Options available: Disable, Enable, Auto. Default setting is <b>Enable</b> .

(Note) Advanced items are configurable when this item is defined.

### 5-3-1-2 Prefetcher Settings

Parameter	Description
Prefetcher settings	
L1 Stream HW Prefetcher	Enable/Disable L1 Stream HW Prefetcher. Options available: Disable, Enable, Auto. Default setting is <b>Auto</b> .
L1 Stride Prefetcher	Use memory access history of individual instructions to fetch additional lines when each access is a constant distance from the previous. Enable/Disable L1 Stride Prefetcher. Options available: Disable, Enable, Auto. Default setting is <b>Auto</b> .
L1 Region Prefetcher	Use memory access history to fetch additional lines when the data access for a given instruction tends to be followed by other data accesses. Enable/Disable L1 Region Prefetcher. Options available: Disable, Enable, Auto. Default setting is <b>Auto</b> .
L2 Stream HW Prefetcher	Enable/Disable L2 Stream HW Prefetcher. Options available: Disable, Enable, Auto. Default setting is <b>Auto</b> .
L2 Up/Down Prefetcher	Use memory access history to determine whether to fetch the next or previous line for all memory accesses. Enable/Disable L2 Up/Down Prefetcher. Options available: Disable, Enable, Auto. Default setting is <b>Auto</b> .
L1 Burst Prefetch Mode	Enable/Disable L1 Burst Prefetch Mode. Options available: Disable, Enable, Auto. Default setting is <b>Auto</b> .

### 5-3-1-3 Core Watchdog

Parameter	Description
Core Watchdog	
Core Watchdog Timer Enable <sup>(Note)</sup>	Enable/Disable CPU Watchdog Timer. Options available: Disabled, Enabled, Auto. Default setting is <b>Auto</b> .
Core Watchdog Timer Interval	Select the CPU Watchdog Timer interval. Options available: 2.681s, 1.340s, 669.41ms, 334.05ms, 166.37ms, 82.53ms, 40.61ms, 20.970ms, 10.484ms, 5.241ms, 2.620ms, 1.309ms, 654.08us, 326.4us, 162.56us, 80.64us, 39.68us, Auto. Default setting is <b>Auto</b> .

(Note) Advanced items prompt when this item is defined.

### 5-3-2 DF Common Options

Parameter	Description
DF Common Options	
Memory Addressing	Press [Enter] for configuration of advanced items.
ACPI	Press [Enter] for configuration of advanced items.
Link	Press [Enter] for configuration of advanced items.
SDCI	Press [Enter] for configuration of advanced items.
Probe Filter	Press [Enter] for configuration of advanced items.
DF Watchdog Timer Interval	Configures the Data Fabric watchdog timer interval. Options available: Auto, 41ms, 166ms, 334ms, 669ms, 1.34 seconds, 2.68 seconds, 5.36 seconds. Default setting is <b>Auto</b> .
Disable DF to external IP sync flood propagation	Enable/Disable SyncFlood to UMC & downstream slaves. Options available: Sync flood disabled, Sync flood enabled, Auto. Default setting is <b>Auto</b> .
Sync flood propagation to DF Components	Enable/Disable DF Sync Flood propagation. Options available: Sync flood disabled, Sync flood enabled, Auto. Default setting is <b>Auto</b> .
Freeze DF module queues on error	Options available: Disabled, Enabled, Auto. Default setting is <b>Auto</b> .
CC6 memory region encryption	Controls whether or not the CC6 save/restor memory is encrypted. Options available: Disabled, Enabled, Auto. Default setting is <b>Auto</b> .
CCD B/W Balance Throttle Level	Options available: Auto, Level 0, Level 1, Level 2, Level 3, Level 4. Default setting is <b>Auto</b> .

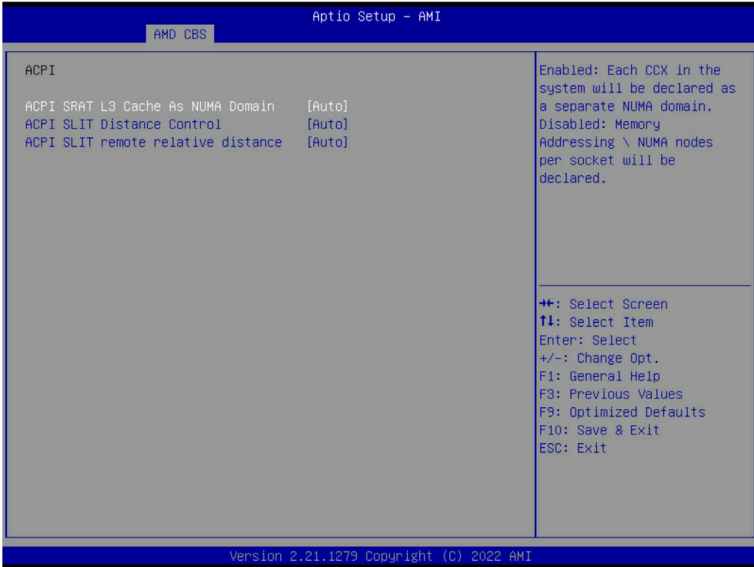

### 5-3-2-1 Memory Addressing

Parameter	Description
Memory Addressing	
NUMA nodes per socket	Specifies the number of desired NUMA nodes per socket. Options available: NPS0, NPS1, NPS2, NPS4, Auto. Default setting is <b>Auto</b> . NOTE! <ul style="list-style-type: none"> <li>• <b>Available options may vary by system configuration.</b></li> <li>• <b>Only dual processor configuration supports NPS0.</b></li> </ul>
Memory interleaving	Enable/Disable the Memory interleaving feature. Options available: Disabled, Auto, Enabled. Default setting is <b>Auto</b> .
1TB remap	Enable/Disable to remap DRAM out of the space just below the 1TB boundary. The ability to remap depends on DRAM configuration, NPS, and interleaving selection, and may not always be possible. Options available: Do not remap, Attempt to remap, Auto. Default setting is <b>Auto</b> .
DRAM map inversion	Enable/Disable the DRAM map inversion function. Options available: Disabled, Enabled, Auto. Default setting is <b>Auto</b> .
Location of private memory regions	Controls whether or not the private memory regions (PSP, SMU and CC6) are at the top of DRAM or distributed. Options available: Distributed, Consolidated, Auto. Default setting is <b>Auto</b> .
CXL Memory interleaving	Options available: Disabled, Enabled, Auto. Default setting is <b>Auto</b> .
CXL Sublink interleaving	Options available: Enable, Disable, Auto. Default setting is <b>Auto</b> .

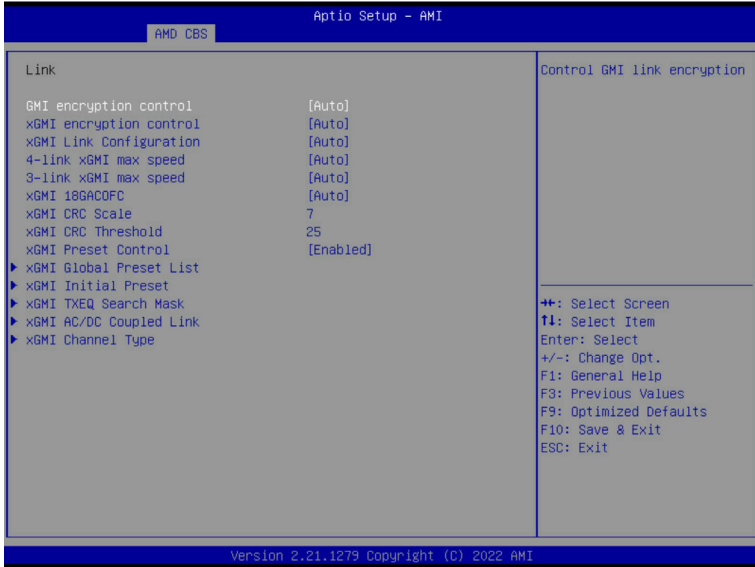

### 5-3-2-2 ACPI

Parameter	Description
ACPI	
ACPI SRAT L3 Cache As NUMA Domain	Enable/Disable report each L3 cache as a NUMA Domain to the OS. Options available: Disabled, Enabled, Auto. Default setting is <b>Auto</b> .
ACPI SLIT Distance Control	Determines how the SLIT distances are declared. Options available: Manual, Auto. Default setting is <b>Auto</b> .
ACPI SLIT remote relative distance	Sets the remote socket distance for 2P systems as near (2.8) or far (3.2). Options available: Near, Far, Auto. Default setting is <b>Auto</b> .

## 5-3-2-3 Link

Parameter	Description
GMI encryption control	Enable/Disable GMI link encryption. Options available: Disabled, Enabled, Auto. Default setting is <b>Auto</b> .
xGMI encryption control	Enable/Disable xGMI link encryption. Options available: Disabled, Enabled, Auto. Default setting is <b>Auto</b> .
xGMI Link Configuration	Configures the number of xGMI2 links used on a multi-socket system. Options available: Auto, 3 xGMI Links, 4 xGMI Links. Default setting is <b>Auto</b> .
4-link xGMI max speed	Specifies the max speed of 4-link xGMI. Options available: 12Gbps, 16Gbps, 17Gbps, 18Gbps, 20Gbps, 22Gbps, 23Gbps, 24Gbps, 25Gbps, 26Gbps, 27Gbps, 30Gbps, 32Gbps, Auto. Default setting is <b>Auto</b> .
3-link xGMI max speed	Specifies the max speed of 3-link xGMI. Options available: 12Gbps, 16Gbps, 17Gbps, 18Gbps, 20Gbps, 22Gbps, 23Gbps, 24Gbps, 25Gbps, 26Gbps, 27Gbps, 30Gbps, 32Gbps, Auto. Default setting is <b>Auto</b> .
xGMI 18GACOFC	Configures xGMI 18GACOFC. Options available: Auto, Enable, Disable. Default setting is <b>Auto</b> .
xGMI CRC Scale	Configures leaky bucket scale for xGMI and WAFL CRC errors. Every scale milliseconds an error will leak from the CRC counter. Default setting is 7.
xGMI CRC Threshold	Configures leaky bucket threshold for xGMI and WAFL CRC errors. If link CRC counter exceeds this threshold, an error will be logged. Default setting is 25.
xGMI Preset Control	Enable/Disable xGMI Preset control. Options available: Disabled, Enabled, Auto. Default setting is <b>Auto</b> .

Parameter	Description
xGMI Global Preset List	Press [Enter] to configure the xGMI Preset list.
xGMI Initial Preset	Press [Enter] to configure the xGMI Initial Preset CPU link.
xGMI TXEQ Search Mask	Press [Enter] to configure the xGMI TXEQ Search Mask CPU link.
xGMI AC/DC Coupled Link	Press [Enter] to configure the xGMI AC/DC Coupled link. ♦ xGMI AC/DC Coupled Link Control <sup>(Note)</sup> – Options available: Manual, Auto. Default setting is <b>Auto</b> .
xGMI Channel Type	Press [Enter] to configure the xGMI Channel Type. ♦ xGMI Channel Type Control <sup>(Note)</sup> – Options available: Manual, Auto. Default setting is <b>Auto</b> .

(Note) Advanced items prompt when this item is defined.

### 5-3-2-4 SDCI

Parameter	Description
SDCI <sup>(Note)</sup>	Options available: Disabled, Enabled, Auto. Default setting is <b>Auto</b> .
DisRmSteer	Options available: Disabled, Enabled, Auto. Default setting is <b>Auto</b> .

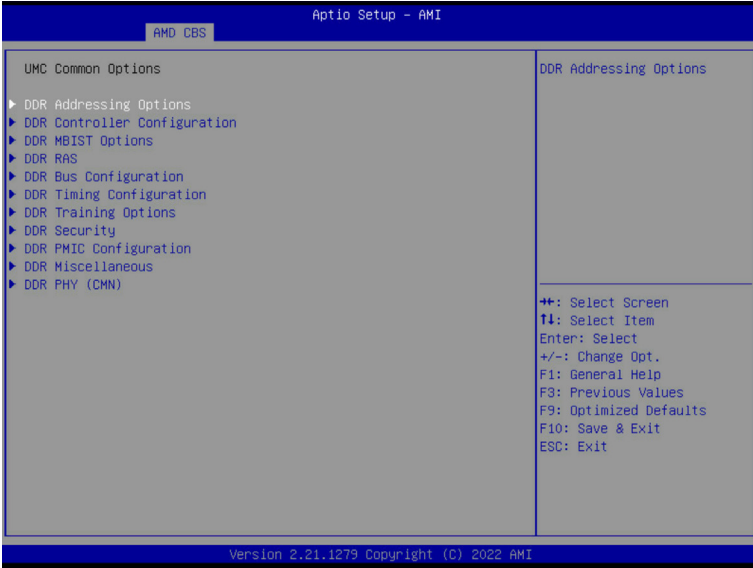

(Note) Advanced items prompt when this item is defined.

### 5-3-2-5 Probe Filter

Parameter	Description
Organization	Specifies whether multiple memory/CXL channels will share probe filter storage. Options available: Auto, Dedicated, Shared. Default setting is <b>Auto</b> .
Periodic Directory Rinse (PDR) Tuning	Controls PDR settings that may impact performance by workload and/or processor. Options available: Memory-Sensitive, Cache-Bound, Neutral, Auto. Default setting is <b>Auto</b> .

### 5-3-3 UMC Common Options

Parameter	Description
UMC Common Options	
DDR Addressing Options	Press [Enter] for configuration of advanced items.
DDR Controller Configuration	Press [Enter] for configuration of advanced items.
DDR MBIST Options	Press [Enter] for configuration of advanced items.
DDR RAS	Press [Enter] for configuration of advanced items.
DDR Bus Configuration	Press [Enter] for configuration of advanced items.
DDR Timing Configuration	Press [Enter] for configuration of advanced items.
DDR Training Options	Press [Enter] for configuration of advanced items.
DDR Security	Press [Enter] for configuration of advanced items.
DDR PMIC Configuration	Press [Enter] for configuration of advanced items.
DDR Miscellaneous	Press [Enter] for configuration of advanced items.
DDR PHY (CMN)	Press [Enter] for configuration of advanced items.

### 5-3-3-1 DDR Addressing Options

Parameter	Description
DDR Addressing Options	
Chipselect Interleaving	Interleaves memory blocks across the DRAM chip selects for node 0. Options available: Disabled, Auto. Default setting is <b>Auto</b> .
Address Hash Bank	Enable or disable bank addressing hashing. Options available: Disabled, Enabled, Auto. Default setting is <b>Auto</b> .
Address Hash CS	Enable or disable CS addressing hashing. Options available: Auto, Enabled, Disabled. Default setting is <b>Auto</b> .
Address Hash Subchannel	Enable or disable sub-channel addressing hashing. Options available: Auto, Enabled, Disabled. Default setting is <b>Auto</b> .
Bank SwapMode	Options available: Auto, Disabled, Swap CPU. Default setting is <b>Auto</b> .

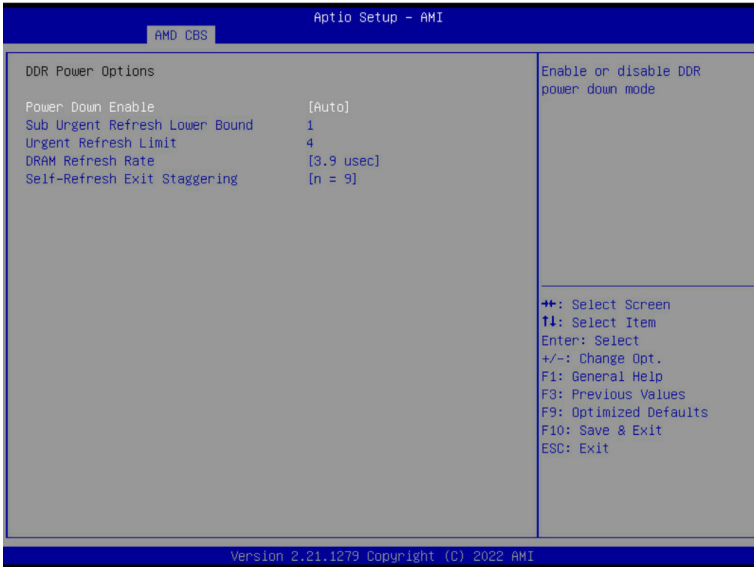

### 5-3-3-2 DDR Controller Configuration

Parameter	Description
DDR Controller Configuration	
DDR Power Options	Press [Enter] for configuration of advanced items.
Memory Channel Disable	Press [Enter] for configuration of advanced items.
Refresh Management (RFM)	Press [Enter] for configuration of advanced items.

### 5-3-3-2-1 DDR Power Options

Parameter	Description
DDR Power Options	
Power Down Enable	Enable or disable DDR power down mode. Options available: Disabled, Enabled, Auto. Default setting is <b>Auto</b> .
Sub Urgent Refresh Lower Bound	Specifies the stored refresh limit required to enter sub-urgent refresh mode.
Urgent Refresh Limit	Specifies the stored refresh limit required to enter urgent refresh mode.
DRAM Refresh Rate	DRAM refresh rate: 1.95us or 3.9us. Options available: 3.9 usec, 1.95usec. Default setting is <b>3.9 usec</b> .
Self-Refresh Exit Staggering	Options available: Disabled, n=1~9. Default setting is <b>n=9</b> .

### 5-3-3-2-2 Memory Channel Disable

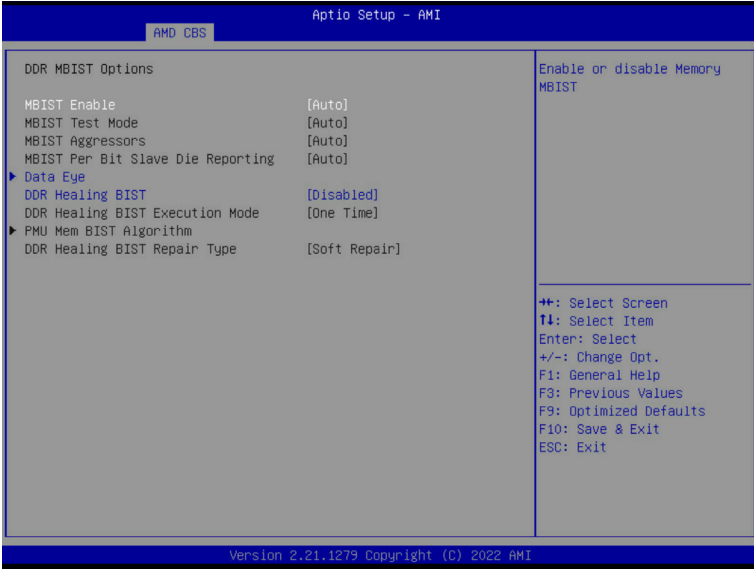

Parameter	Description
Memory Channel Disable	
Memory Channel Disable Bitmask	
CPU0 Channel_#	Press [Enter] to enable/disable specific memory channel.

### 5-3-3-2-3 Refresh Management (RFM)

Parameter	Description
Refresh Management (RFM)	
Refresh Management	Configure Refresh Management. Options available: Enable, Disable, Auto, Force Enable. Default setting is <b>Auto</b> .
RAA Initial Management Threshold	Override Rolling Accumulated ACT Initial Management Threshold. Options available: 32, 40, 48, 56, 64, 72, 80, Auto. Default setting is <b>Auto</b> .
RAA Maximum Management Threshold	Override Rolling Accumulated ACT Maximum Management Threshold. Options available: 3X, 4X, 5X, 6X, Auto. Default setting is <b>Auto</b> .
RAA Refresh Decrement Multiplier	Override RAA Refresh Decrement Multiplier. Options available: 0.5, 1, Auto. Default setting is <b>Auto</b> .

### 5-3-3-3 DDR MBIST Options

Parameter	Description
DDR MBIST Options	
MBIST Enable	Enable/Disable the Memory MBIST function. Options available: Disabled, Enabled, Auto. Default setting is <b>Auto</b> .
MBIST Test Mode <sup>(Note1)</sup>	Selects MBIST Test Mode. <b>Interface Mode:</b> Tests Single and Multiple CS transactions and Basic Connectivity. <b>Data Eye Mode:</b> Measures Voltage vs. Timing. Options available: Auto, Both, Interface Mode, Data Eye Mode. Default setting is <b>Auto</b> .
MBIST Aggressors <sup>(Note1)</sup>	Enable/Disable MBIST Aggressor test. Options available: Auto, Enabled, Disabled. Default setting is <b>Auto</b> .
MBIST Per Bit Slave Die Reporting <sup>(Note1)</sup>	Enable/Disable to report 2D data eye results in ABL log for each DQ, Chipselect, and Channel. Options available: Auto, Enabled, Disabled. Default setting is <b>Auto</b> .
Data Eye	Press [Enter] to configure advanced items.
Memory Healing BIST	Enable/Disable memory healing BIST. Options available: Disabled, PMU Mem BIST, Self-Healing Mem BIST, PMU and Self-Healing Mem BIST. Default setting is <b>Disabled</b> .

(Note1) This item appears when **MBIST Enable** is set to **Enabled**.

Parameter	Description
DDR Healing BIST Execution Mode <sup>(Note2)</sup>	Options available: One Time, Every boot. Default setting is <b>One Time</b> .
PMU Mem BIST Algorithm <sup>(Note2)</sup>	Press [Enter] to enable/disable PMU Mem BIST Algorithm.
DDR Healing BIST Repair Type <sup>(Note2)</sup>	For DRAM errors found in the BIOS memory BIST select the repair type. Options available: Soft Repair, Hard Repair, No Repairs -Test only. Default setting is <b>Soft Repair</b> .

(Note2) This item appears when **DDR Healing BIST** is defined.

### 5-3-3-1 Data Eye

Parameter	Description
Data Eye	
Pattern Select	Options available: PRBS, SSO, Both. Default setting is <b>PRBS</b> .
Pattern Length	Determines the pattern length. The possible options are N=3....12.
Aggressor Channel	This item helps read the aggressors channels. Options available: One Sub-Channel, Half Channels, All Channels. Default setting is <b>All Channels</b> .
Aggressor Static Lane Control	Enable/Disable the Aggressor Static Lane Control function. Options available: Enabled, Disabled. Default setting is <b>Disabled</b> .
Aggressor Static Lane Select Upper 32 bits	This item is configurable when <b>Aggressor Static Lane Control</b> is set to <b>Enabled</b> .
Aggressor Static Lane Select Lower 32 bits	This item is configurable when <b>Aggressor Static Lane Control</b> is set to <b>Enabled</b> .
Aggressor Static Lane Select ECC	This item is configurable when <b>Aggressor Static Lane Control</b> is set to <b>Enabled</b> .
Aggressor Static Lane Value	This item is configurable when <b>Aggressor Static Lane Control</b> is set to <b>Enabled</b> .
Target Static Lane Control	Enable/Disable the Target Static Lane Control function. Options available: Enabled, Disabled. Default setting is <b>Disabled</b> .

Parameter	Description
Target Static Lane Select Upper 32 bits	This item is configurable when <b>Target Static Lane Control</b> is set to <b>Enabled</b> .
Target Static Lane Select Lower 32 bits	This item is configurable when <b>Target Static Lane Control</b> is set to <b>Enabled</b> .
Target Static Lane Select ECC	This item is configurable when <b>Target Static Lane Control</b> is set to <b>Enabled</b> .
Target Static Lane Value	This item is configurable when <b>Target Static Lane Control</b> is set to <b>Enabled</b> .
Worst Case Margin Granularity	Configures Worst Case Margin Granularity. Options available: Per Chip Select, Per Nibble. Default setting is <b>Per Chip Select</b> .
Read Voltage Sweep Step Size	Configures the step size for read Data Eye voltage sweep. Options available: 1, 2, 4. Default setting is 1.
Read Timing Sweep Step Size	Configures the step size for read Data Eye timing sweep. Options available: 1, 2, 4. Default setting is 1.
Write Voltage Sweep Step Size	Configures the step size for write Data Eye voltage sweep. Options available: 1, 2, 4. Default setting is 1.
Write Timing Sweep Step Size	Configures the step size for write Data Eye timing sweep. Options available: 1, 2, 4. Default setting is 1.
Silent Execution	Execute MBIST Data Eye silently without ABL log output. Options available: Enabled, Disabled. Default setting is <b>Disabled</b> .

### 5-3-3-4 DDR RAS

Parameter	Description
DDR RAS	
Data Poisoning	Enable/Disable the Data Poisoning function. Options available: Auto, Enabled, Disabled. Default setting is <b>Auto</b> .
DRAM Boot Time Post Package Repair	Enable/Disable the DRAM Boot Time Post Package Repair function. Options available: Enable, Disable. Default setting is <b>Disable</b> .
DRAM Runtime Post Package Repair	Enable/Disable the DRAM Runtime Post Package Repair function. Options available: Enable, Disable. Default setting is <b>Disable</b> .
RCD Parity	Enable/Disable the RCD Parity function. Options available: Auto, Enabled, Disabled. Default setting is <b>Enabled</b> .
Max RCD Parity Error Replay	Default setting is <b>8</b> .
Write CRC	Enable/Disable the Write CRC function. Options available: Auto, Enabled, Disabled. Default setting is <b>Enabled</b> .
Max Write CRC Error Replay	Default setting is <b>8</b> .
Read CRC	Enable/Disable the Read CRC function. Options available: Auto, Enabled, Disabled. Default setting is <b>Enabled</b> .
Max Read CRC Error Replay	Default setting is <b>8</b> .
Disable Memory Error Injection	Options available: False, True, Auto. Default setting is <b>Auto</b> .
ECC Configuration	Press [Enter] to configure advanced items. <ul style="list-style-type: none"> <li>◆ DRAM ECC Symbol Size <ul style="list-style-type: none"> <li>– Configures the DRAM ECC Symbol Size.</li> <li>– Options available: Auto, x4, x16. Default setting is <b>Auto</b>.</li> </ul> </li> </ul>

Parameter	Description
ECC Configuration (continued)	<ul style="list-style-type: none"> <li>◆ DRAM ECC Enable <ul style="list-style-type: none"> <li>– Enable/Disable DRAM ECC. When set to Auto, it will set ECC to enable.</li> <li>– Options available: Auto, Enabled, Disabled. Default setting is <b>Auto</b>.</li> </ul> </li> <li>◆ DRAM UECC Retry <ul style="list-style-type: none"> <li>– Enable/Disable DRAM UECC Retry.</li> <li>– Options available: Auto, Enabled, Disabled. Default setting is <b>Disabled</b>.</li> </ul> </li> <li>◆ Max DRAM UECC Error Replay<sup>(Note)</sup> <ul style="list-style-type: none"> <li>– Default setting is <b>8</b>.</li> </ul> </li> <li>◆ Memory Clear <ul style="list-style-type: none"> <li>– Options available: Auto, Enabled, Disabled. Default setting is <b>Auto</b>.</li> </ul> </li> <li>◆ Address XDR after ECC <ul style="list-style-type: none"> <li>– Options available: Auto, Enabled, Disabled. Default setting is <b>Disabled</b>.</li> </ul> </li> </ul>
DRAM Scrubbers	<p>Press [Enter] to configure advanced items.</p> <ul style="list-style-type: none"> <li>◆ DRAM ECS Mode <ul style="list-style-type: none"> <li>– Options available: Auto, AutoECS, ManualECS, DisableECS. Default setting is <b>Auto</b>.</li> </ul> </li> <li>◆ DRAM Redirect Scrubber Enable <ul style="list-style-type: none"> <li>– Options available: Auto, Enabled, Disabled. Default setting is <b>Auto</b>.</li> </ul> </li> <li>◆ DRAM Scrub Redirection Limit <ul style="list-style-type: none"> <li>– Options available: Auto, 8 Scrubs, 4 Scrubs, 2 Scrubs, 1 Scrub. Default setting is <b>Auto</b>.</li> </ul> </li> <li>◆ DRAM Scrub Time <ul style="list-style-type: none"> <li>– Options available: Disabled, 1 hour, 4 hours, 6 hours, 8 hours, 12 hours, 16 hours, 24 hours, 48 hours. Default setting is <b>24 Hours</b>.</li> </ul> </li> <li>◆ DRAM Error Threshold Count <ul style="list-style-type: none"> <li>– Options available: Auto, ETC_4, ETC_16, ETC_64, ETC_256, ETC_1024, ETC_4096. Default setting is <b>Auto</b>.</li> </ul> </li> <li>◆ DRAM ECS Count Mode <ul style="list-style-type: none"> <li>– Options available: Auto, Row Count Mode, Code Word Count Mode. Default setting is <b>Auto</b>.</li> </ul> </li> <li>◆ DRAM AutoEcs during Self Refresh <ul style="list-style-type: none"> <li>– Options available: Auto, AutoEcs Disabled, AutoEcs Enabled. Default setting is <b>Auto</b>.</li> </ul> </li> <li>◆ DRAM ECS WriteBack Suppression <ul style="list-style-type: none"> <li>– Options available: Auto, Enable, Disable. Default setting is <b>Auto</b>.</li> </ul> </li> </ul>

(Note) This item available when **DRAM UECC Retry** is set to **Enabled**.

Parameter	Description
DRAM Scrubbers (continued)	<ul style="list-style-type: none"> <li>◆ DRAM X4 WriteBack Suppression               <ul style="list-style-type: none"> <li>– Options available: Auto, Enable, Disable. Default setting is <b>Auto</b>.</li> </ul> </li> </ul>
DRAM Corrected Error Counter Enable	Configure DRAM Corrected Error Counter function. Options available: Disable, NoLeakMode, Leak Mode. Default setting is <b>Leak Mode</b> .
DRAM Corrected Error Counter Interrupt Enable	Enable SMI when DRAM corrected Error Counter count exceeds the threshold value. Options available: False, True. Default setting is <b>True</b> .
DRAM Corrected Counter Leak Rate	Program Rate value for DRAM Corrected Error Counter function. Default setting is <b>7</b> .
DRAM Corrected Error Counter Start Count	Program starting value for DRAM Corrected Error Counter function. Default setting is <b>FFF5</b> .

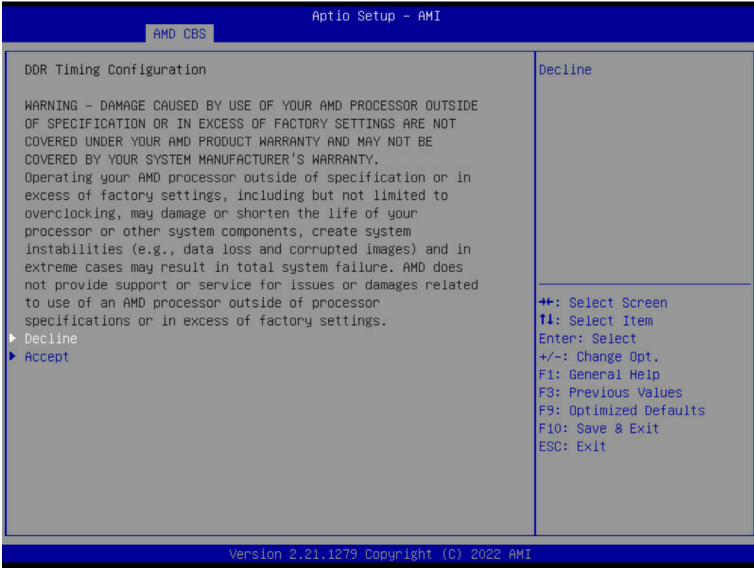

### 5-3-3-5 DDR Bus Configuration

Parameter	Description
DDR Bus Configuration	
Dram ODT impedance RTT_NOM_WR	Select the DRAMs On-die Termination impedance for RTT_NOM_WR. Options available: Auto, RTT_OFF, RZQ (240), RZQ/2 (120), RZQ/3 (80) RZQ/4 (60), RZQ/5(48), RZQ/6(40), RZQ/7(34). Default setting is <b>Auto</b> .
Dram ODT impedance RTT_NOM_RD	Select the DRAMs On-die Termination impedance for RTT_NOM_RD. Options available: Auto, RTT_OFF, RZQ (240), RZQ/2 (120), RZQ/3 (80) RZQ/4 (60), RZQ/5(48), RZQ/6(40), RZQ/7(34). Default setting is <b>Auto</b> .
Dram ODT impedance RTT_WR	Select the DRAMs On-die Termination impedance for RTT_WR. Options available: Auto, RTT_OFF, RZQ (240), RZQ/2 (120), RZQ/3 (80) RZQ/4 (60), RZQ/5(48), RZQ/6(40), RZQ/7(34). Default setting is <b>Auto</b> .
Dram ODT Timpedance RTT_PARK	Select the DRAMs On-die Termination impedance for RTT_PARK. Options available: Auto, RTT_OFF, RZQ (240), RZQ/2 (120), RZQ/3 (80) RZQ/4 (60), RZQ/5(48), RZQ/6(40), RZQ/7(34). Default setting is <b>Auto</b> .
Dram ODT Timpedance DQS_RTT_PARK	Select the DRAMs On-die Termination impedance for DQS_RTT_PARK. Options available: Auto, RTT_OFF, RZQ (240), RZQ/2 (120), RZQ/3 (80) RZQ/4 (60), RZQ/5(48), RZQ/6(40), RZQ/7(34). Default setting is <b>Auto</b> .

Parameter	Description
Processor ODT impedance	Select the ODT impedance for all DBYTE IOs. Options available: Auto, High Impedance, 480 ohm, 240 ohm, 160 ohm, 120 ohm, 96 ohm, 80 ohm, 68.6 ohm, 60 ohm, 53.3 ohm, 48 ohm, 43.6 ohm, 40 ohm, 36.9 ohm, 34.3 ohm, 32 ohm, 30 ohm, 28.2 ohm, 26.7 ohm, 25.3 ohm. Default setting is <b>Auto</b> .
Dram DQ drive strengths	Select the Dram Pull-up and Pull-Down Output Driver Impedance for all DQ and DMI IOs.. Options available: Auto, 48 ohm, 40 ohm, 34 ohm, Default setting is <b>Auto</b> .

### 5-3-3-6 DDR Timing Configuration

Parameter	Description
DDR Timing Configuration	Decline/Accept to configure the advanced items.
Accept	
Active Memory Timing Settings <sup>(Note)</sup>	Active memory Timing Settings. Options available: Auto, Enabled. Default setting is <b>Auto</b> .
Memory Target Speed	Specifies the memory target speed in MT/s. Options available: Auto, DDR3200, DDR3600, DDR4000, DDR4400, DDR4800, DDR5200, DDR5600. Default setting is <b>Auto</b> .
SPD Timing	Press [Enter] to configure advanced items.
Non-SPD Timing	Press [Enter] to configure advanced items.

(Note) Advanced items prompt when this item is defined.

### 5-3-3-7 DDR Training Options

Parameter	Description
DDR Training Options	
DRAM PDA Enumerate ID Programming Mode	Specify PDA enumeration mode. Options available: Auto, Toggling PDA enumeration mode, Legacy PDA enumeration mode. Default setting is <b>Auto</b> .

### 5-3-3-8 DDR Security

Parameter	Description
Security	
TSME	Enable/Disable Transparent SME. Options available: Auto, Enabled, Disabled. Default setting is <b>Auto</b> .
AES	Options available: AES-128, AES-256. Default setting is <b>AES-256</b> .
Data Scramble	Enable/Disable Data Scrambling. Options available: Enabled, Disabled. Default setting is <b>Enabled</b> .
SME-MK	Options available: Enabled, Disabled. Default setting is <b>Disabled</b> .

### 5-3-3-9 DDR PMIC Configuration

Parameter	Description
DDR PMIC Configuration	
PMIC Error Reporting	Enables support for PMIC Error Reporting. Options available: Auto, False, True. Default setting is <b>Auto</b> .
PMIC Operation Mode	Options available: Secure Mode, Programmable Mode. Default setting is <b>Programmable Mode</b> .
PMIC Fault Recovery	Options available: Always, Never, Once. Default setting is <b>Always</b> .
PMIC SWC VDDIO	Default setting is <b>1100</b> .
PMIC SWA/SWB VDD Core	Default setting is <b>1100</b> .
PMIC Stagger Delay	Default setting is <b>5</b> .
Max PMIC Power On	Default setting is <b>FF</b> .

### 5-3-3-10 DDR Miscellaneous

Parameter	Description
DDR Miscellaneous	
DRAM Survives Warm Reset	Options available: Enabled, Disabled. Default setting is <b>Enabled</b> .

### 5-3-3-11 DDR PHY (CMN)

Parameter	Description
DDR PHY (CMN)	
Periodic Training <sup>(Note)</sup>	Options available: Auto, Enabled, Disabled. Default setting is <b>Auto</b> .
Periodic Training Interval	Specifies the Periodic Training interval in millisecond.

(Note) Advanced items prompt when this item is defined.

## 5-3-4 NBIO Common Options

Aptio Setup - AMI

AMD CBS

NBIO Common Options		Enable/Disable IOMMU
IOMMU	[Enabled]	
DMAR Support	[Auto]	
DMA Protection	[Auto]	
DRTM Virtual Device Support	[Auto]	
DRTM Memory Reservation	[Auto]	
ACS Enable	[Auto]	
PCIe ARI Support	[Auto]	
PCIe ARI Enumeration	[Auto]	
PCIe Ten Bit Tag Support	[Auto]	
▶ SMU Common Options		
▶ NBIO RAS Common Options		
Enable AER Cap	[Auto]	
Early Link Speed	[Auto]	
Hot Plug Handling mode	[Auto]	
Hot Plug Allow FF in Synchronous	[Disabled]	
Presence Detect Select mode	[Auto]	
Data Link Feature Cap	[Auto]	
CV test	[Auto]	
SEV-SNP Support	[Disable]	
Allow Compliance	[Auto]	
SRIS	[Auto]	
Multi Upstream Auto Speed Change	[Auto]	
		⇧⇩: Select Screen ↑↓: Select Item Enter: Select +/-: Change Opt. F1: General Help F3: Previous Values F9: Optimized Defaults F10: Save & Exit ESC: Exit

Parameter	Description
NBIO Common Options	
IOMMU	Enable/Disable the IOMMU function. Options available: Disabled, Enabled. Default setting is <b>Enabled</b> .
DMAr Support	Enable/Disable DMAr system protection during POST. Options available: Disabled, Enabled, Auto. Default setting is <b>Auto</b> .
DMA Protection	Enable/Disable DMA remap support in IVRS IVinfo Field. Options available: Auto, Enabled, Disabled. Default setting is <b>Auto</b> .
DRTM Virtual Device Support	Enable/Disable DRTM ACPI virtual device. Options available: Disabled, Enabled, Auto. Default setting is <b>Auto</b> .
DRTM Memory Reservation	Enable/Disable DRTM Memory reservation. Options available: Disabled, Enabled, Auto. Default setting is <b>Auto</b> .
ACS Enable	Enable/Disable ACS. Options available: Enable, Disabled, Auto. Default setting is <b>Auto</b> .
PCIe ARI Support	Enable/Disable Alternative Routing-ID Interpretation. Options available: Disable, Enable, Auto. Default setting is <b>Auto</b> .
PCIe ARI Enumeration	ARI Forwarding Enable for each downstream port. Options available: Disable, Enable, Auto. Default setting is <b>Auto</b> .
PCIe Ten Bit Tag Support	Enable/Disable PCIe ten bit tags for supported devices. (Auto=Disabled) Options available: Disable, Enable, Auto. Default setting is <b>Auto</b> .
SMU Common Options	Press [Enter] for configuration of advanced items.
NBIO RAS Common Options	Press [Enter] for configuration of advanced items.
Enable AER Cap	Enable/Disable Advanced Error Reporting Capability. Options available: Enable, Disabled, Auto. Default setting is <b>Auto</b> .
Early Link Speed	Configures Early Link Speed. Options available: Auto, Gen1, Gen2. Default setting is <b>Auto</b> .
Hot Plug Handling mode	Controls the Hot Plug Handling mode. Options available: OS First, Firmware First/EDR if OS supports, Firmware First but allow OS First, System Firmware Intermediary, Auto. Default setting is <b>Auto</b> .
Hot Plug Allow FF in Synchronous	Allows firmware first hot plug handling mode to operate in mode A and mode B synchronous mappings. Options available: Disabled, Enabled. Default setting is <b>Disabled</b> .
Presence Detect Select mode	Controls the Presence Detect Select mode. Options available: OR, AND, Auto. Default setting is <b>Auto</b> .

<b>Parameter</b>	<b>Description</b>
Data Link Feature Cap	Enable/Disable the data link feature capability. Options available: Enabled, Disabled, Auto. Default setting is <b>Auto</b> .
CV test	Enable/Disable the running PCIE CV tool support. Options available: Auto, Enabled, Disabled. Default setting is <b>Auto</b> .
SEV-SNP Support	Enable/Disable the SEV-SNP support. Options available: Disable, Enable. Default setting is <b>Disable</b> .
Allow Compliance	When enabled, allows the PCIe RP to enter Polling.Compliance state. Options available: Auto, Disable, Enable. Default setting is <b>Auto</b> .
SRIS	Options available: Auto, Disable, Enable. Default setting is <b>Auto</b> .
Multi Upstream Auto Speed Change	Defines the setting of this feature for all PCIe devices. Options available: Disabled, Enabled, Auto. Default setting is <b>Auto</b> .
Multi Auto Speed Change On Last Rate	Options available: Disable, Enable, Auto. Default setting is <b>Auto</b> .
PCIE Link Speed Capability	Options available: Maximum speed, Gen1, Gen2, Gen3, Gen4, Gen5, Auto. Default setting is <b>Auto</b> .
RTM Margining Support	Options available: Disable, Enable, Auto. Default setting is <b>Auto</b> .
EQ Bypass To Highest Rate	Options available: Disable, Enable, Auto. Default setting is <b>Auto</b> .
nBif Common Options	Press [Enter] for configuration of advanced items.

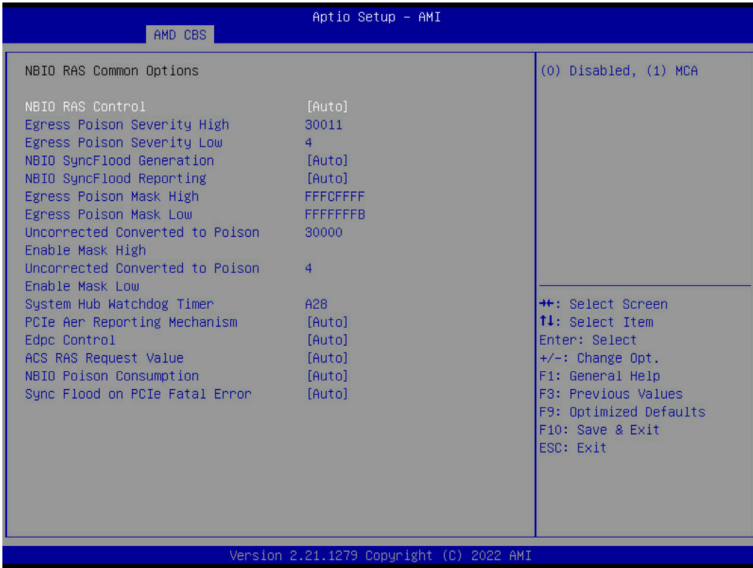

### 5-3-4-1 SMU Common Options

Parameter	Description
SMU Common Options	
TDP Control	Options available: Manual, Auto. Default setting is <b>Auto</b> .
PPT Control	Options available: Manual, Auto. Default setting is <b>Auto</b> .
Determinism Control	Selects use the fused Determinism or set customized Determinism. Options available: Manual, Auto. Default setting is <b>Auto</b> .
xGMI Link Width Control	Options available: Manual, Auto. Default setting is <b>Auto</b> .
APBDIS	Options available: 0, 1, Auto. Default setting is <b>Auto</b> .
Power Profile Selection	Options available: High Performance Mode, Efficiency Mode, Maximum IO Performance Mode. Default setting is <b>High Performance Mode</b> .
BoostFmaxEn	Options available: Manual, Auto. Default setting is <b>Auto</b> .
DF PState Frequency Optimizer	Options available: Auto, Enabled, Disabled. Default setting is <b>Auto</b> .
DF Cstates	Options available: Disabled, Enabled, Auto. Default setting is <b>Disabled</b> .
CPPC	Enable/Disable the CPPC feature. Options available: Disabled, Enabled, Auto. Default setting is <b>Auto</b> .
HSMP Support	Enable/Disable the HSMP support. Options available: Disabled, Enabled, Auto. Default setting is <b>Auto</b> .

Parameter	Description
SVI3 SVC Speed Control	Options available: Auto, Manual. Default setting is <b>Auto</b> .
3D V-Cache	Options available: Auto, Disable, 1 stack, 2 stack, 4 stack. Default setting is <b>Auto</b> .
Diagnostic Mode	Options available: Disabled, Enabled, Auto. Default setting is <b>Auto</b> .
PCIe Speed PMM Control	Options available: Dynamic link speed determined by Power Management functionality, Static Target Link Speed (GEN4), Static Target Link Speed (GEN5), Auto. Default setting is <b>Auto</b> .

## 5-3-4-2 NBIO RAS Common Options

Parameter	Description
NBIO RAS Common Options	
NBIO RAS Control	Options available: Disabled, MCA, Auto. Default setting is <b>Auto</b> .
Egress Poison Severity High	Configures the Egress Poison High Severity. Each bit set to 1 enables High severity on the associated IOHC egress port. A bit of 0 indicates LOW severity.
Egress Poison Severity Low	Configures the Egress Poison Low Severity. Each bit set to 1 enables High severity on the associated IOHC egress port. A bit of 0 indicates LOW severity.
NBIO SyncFlood Generation	The value may be used to mask SyncFlood caused by NBIO RAS options. Options available: Enabled, Disabled, Auto. Default setting is <b>Auto</b> .
NBIO SyncFlood Reporting	The value may be used to enable SyncFlood reporting to APML. Options available: Enabled, Disabled, Auto. Default setting is <b>Auto</b> .
Egress Poison Mask High	Enables mask for masking of errors logged in EGRESS_POISON_STATUS. For each bit set to 1, errors are masked. For each bit set to 0, errors trigger response actions.
Egress Poison Mask Low	Enables mask for masking of errors logged in EGRESS_POISON_STATUS. For each bit set to 1, errors are masked. For each bit set to 0, errors trigger response actions.

Parameter	Description
Uncorrected Converted to Poison Enable Mask High	Enables mask for masking of uncorrectable parity errors on internal arrays.
Uncorrected Converted to Poison Enable Mask Low	Enables mask for masking of uncorrectable parity errors on internal arrays.
System Hub Watchdog Timer	Specifies the timer interval of the SYSHUB Watchdog timer in milliseconds.
PCIe Aer Reporting Mechanism	Selects the method of reporting AER errors from PCI Express. Options available: Firmware First, Firmware First but allow OS First, OS First, Auto. Default setting is <b>Auto</b> .
Edpc Control	Options available: Disabled, Enabled, Auto. Default setting is <b>Auto</b> .
ACS RAS Request Value	Options available: Direct Request Access Enabled, Request Blocking Enabled, Request Redirect Enabled, Auto. Default setting is <b>Auto</b> .
NBIO Poison Consumption	Options available: Auto, Enabled, Disabled. Default setting is <b>Auto</b> .
Sync Flood on PCIe Fatal Error	Options available: Auto, True, False. Default setting is <b>Auto</b> .

### 5-3-4-3 nBif Common Options

Parameter	Description
MPDMA-TF	<ul style="list-style-type: none"> <li>◆ SRIOV                             <ul style="list-style-type: none"> <li>– Options available: Auto, Disable, Enable. Default setting is <b>Auto</b>.</li> </ul> </li> <li>◆ ARI                             <ul style="list-style-type: none"> <li>– Options available: Auto/Default, Disable, Enable. Default setting is <b>Auto/Default</b>.</li> </ul> </li> <li>◆ AER                             <ul style="list-style-type: none"> <li>– Options available: Auto, Disable, Enable. Default setting is <b>Auto</b>.</li> </ul> </li> <li>◆ ACS                             <ul style="list-style-type: none"> <li>– Options available: Auto, Disable, Enable. Default setting is <b>Auto</b>.</li> </ul> </li> <li>◆ ATS                             <ul style="list-style-type: none"> <li>– Options available: Auto, Disable, Enable. ### 5-3-5 FCH Common Options

Parameter	Description
FCH Common Options	
I3C/I2C Configuration Options	Press [Enter] for configuration of advanced items.
SATA Configuration Options	Press [Enter] for configuration of advanced items.
USB Configuration Options	Press [Enter] for configuration of advanced items.
AC Power Loss Options	Press [Enter] for configuration of advanced items.
Uart Configuration Options	Press [Enter] for configuration of advanced items.
ESPI Configuration Options	Press [Enter] for configuration of advanced items.
FCH RAS Options	Press [Enter] for configuration of advanced items.
Miscellaneous Options	Press [Enter] for configuration of advanced items.

### 5-3-5-1 I3C/I2C Configuration Options

Parameter	Description
I3C/I2C Configuration Options	
I3C/I2C 0/1/2/3 Enable	Options available: Both Disabled, I3C Enabled, I2C Enabled, Auto. Default setting is <b>Auto</b> .
I2C 4/5 Enable	Options available: Disabled, Enabled, Auto. Default setting is <b>Auto</b> .
Release SPD Host Control	Options available: Disabled, Enabled, Auto. Default setting is <b>Auto</b> .
I2C SDA Hold Override	Options available: Disabled, Enabled, Auto. Default setting is <b>Auto</b> .
APML SB-TSI Mode	Options available: I3C, I2C. Default setting is <b>I3C</b> .
I3C Mode Speed	Options available: SDR2(6MHz), SDR0(12.5MHz), Auto. Default setting is <b>Auto</b> .
I3C SDA Hold Value	Configures I3C SDA Hold value.

### 5-3-5-2 SATA Configuration Options

Parameter	Description
SATA Configuration Options	
SATA Enable	Enable/Disable OnChip SATA controller. Options available: Disabled, Enabled, Auto. Default setting is <b>Auto</b> .
SATA RAS Support	Options available: Disabled, Enabled, Auto. Default setting is <b>Auto</b> .
SATA Staggered Spin-up	Options available: Disabled, Enabled, Auto. Default setting is <b>Auto</b> .
SATA Disabled AHCI Prefetch Function	Options available: Disabled, Enabled, Auto. Default setting is <b>Auto</b> .
Aggressive SATA Device Sleep P0/P1	Options available: Disabled, Enabled, Auto. Default setting is <b>Auto</b> .
SATA Controller options	Press [Enter] for configuration of advanced items. <ul style="list-style-type: none"> <li>◆ SATA Controller Enable</li> <li>◆ SATA Controller eSATA</li> <li>◆ SATA Controller DevSlp</li> <li>◆ SATA Controller SGPIO</li> </ul>

### 5-3-5-3 USB Configuration Options

Parameter	Description
USB Configuration Options	
XHCI Controller0/1 enable	Enable/Disable USB controller. Options available: Enabled, Disabled, Auto. Default setting is <b>Auto</b> .
USB ecc SMI Enable	Options available: Enable, Off, Auto. Default setting is <b>Auto</b> .
MCM USB enable	Press [Enter] for configuration of advanced items. <ul style="list-style-type: none"> <li>◆ XHCI2/ XHCI3 enable (Socket1) <ul style="list-style-type: none"> <li>– Options available: Enabled, Disabled, Auto. Default setting is <b>Auto</b>.</li> </ul> </li> </ul>

### 5-3-5-4 AC Power Loss Options

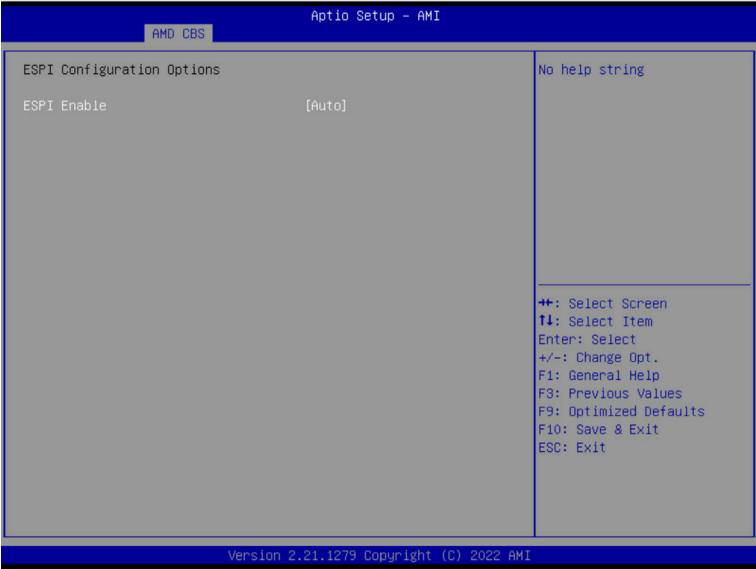

Parameter	Description
AC Power Loss Options	
AC Loss Control	Selects the AC Loss Control Method. Options available: Power Off, Power On, Last State. Default setting is <b>Last State</b> .

### 5-3-5-5 Uart Configuration Options

Parameter	Description
Uart Configuration Options	
Uart 0/1/2/3 Enable	Options available: Disabled, Enabled, Auto. Default setting is <b>Auto</b> .

### 5-3-5-6 ESPI Configuration Options

Parameter	Description
ESPI Configuration Options	
ESPI Enable	Options available: Disabled, Enabled, Auto. Default setting is <b>Auto</b> .

### 5-3-5-7 FCH RAS Options

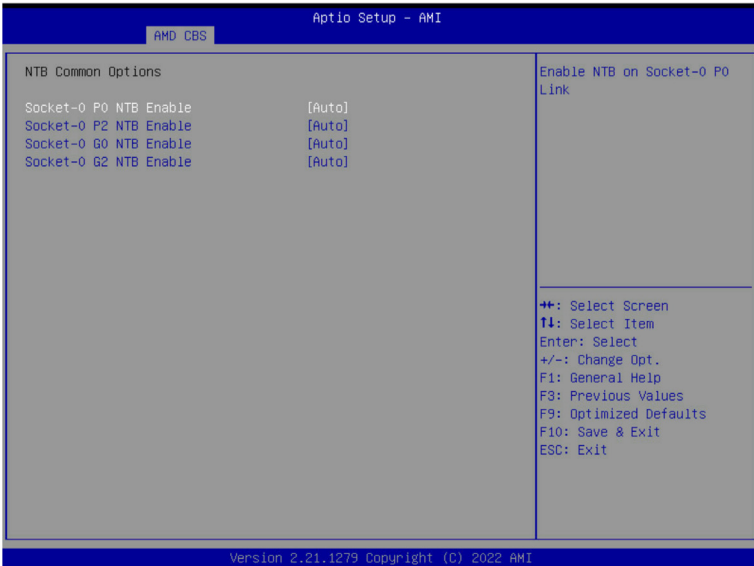

Parameter	Description
FCH RAS Options	
ALink RAS Support	Enable/Disable the ALink RAS Support. Options available: Disabled, Enabled, Auto. Default setting is <b>Auto</b> .
Reset after sync flood	Enables AB to forward downstream sync-flood message to system controller. Options available: Enable, Disable, Auto. Default setting is <b>Auto</b> .

### 5-3-5-8 Miscellaneous Options

Parameter	Description
Miscellaneous Options	
Boot Timer Enable	Enable/Disable Boot Timer. Options available: Disabled, Enabled, Auto. Default setting is <b>Auto</b> .

### 5-3-6 NTB Common Options

Parameter	Description
NTB Common Options	
Socket-0 P0/P2 NTB Enable	Enable/Disable NTB on Socket-0 P0/P2 Link. Options available: Auto, Enable, Disable. Default setting is <b>Auto</b> .
Socket-0 G0/G2 NTB Enable	Enable/Disable NTB on Socket-0 G0/G2 Link. Options available: Auto, Enable, Disable. Default setting is <b>Auto</b> .

### 5-3-7 SOC Miscellaneous Control

Parameter	Description
SOC Miscellaneous Control	
ABL Console Out Control <sup>(Note)</sup>	Enable/Disable the ConsoleOut function for ABL. Options available: Disable, Enable, Auto. Default setting is <b>Auto</b> .
ABL Console Out Serial Port <sup>(Note)</sup>	Options available: eSPI, SOC UART0, SOC UART1, Auto. Default setting is <b>Auto</b> .
ABL Console Out Serial Port IO	Options available: 0x3F8, 0x2F8, 0x3E8, 0x2E8, Auto. Default setting is <b>Auto</b> .
ABL Basic Console Out Control	Enable/Disable the Basic ConsoleOut function for ABL. Options available: Disable, Enable, Auto. Default setting is <b>Auto</b> .
ABL PMU message Control	To Control the total number of PMU debug messages. Options available: Auto, Detailed debug message, Coarse debug message, Stage completion, Assertion messages, Firmware completion message only. Default setting is <b>Auto</b> .
ABL Memory Population message Control	Options available: Warning message, Fatal error. Default setting is <b>Warning message</b> .
PSP error injection support	Options available: False, True. Default setting is <b>False</b> .

(Note) Advanced items are configurable when this item is defined.

Firmware Anti-rollback (FAR)

Press [Enter] for configuration of advanced items.

- ◆ FAR enforcement state
  - Default setting is **Enabled**.
- ◆ SPL value in the CPU Fuse
- ◆ SPL value in the SPL table
- ◆ FAR Switch
  - Options available: Disabled, Enabled, Auto. Default setting is **Auto**.

### 5-3-8 Workload Tuning

Parameter	Description
Workload Tuning	
Workload Profile	Select the profile for different workloads. Options available: CPU Intensive, Java Throughput, Java Latency, Power Efficiency, Memory Throughput Intensive, Storage IO Intensive, NIC Throughput Intensive, NIC Latency Sensitive, Accelerator Throughput, VMware vSphere Optimized, Linux KVM Optimized, Container Optimized, RDBMS Optimized, Big Data Analytics Optimized, IOT Gateway, HPC Optimized, OpenStack NFV, OpenStack for ReakTime Kernel, Auto. Default setting is <b>Auto</b> .
Performance Tracing	Enable to allow capturing performance traces. Options available: Disabled, Enabled, Auto. Default setting is <b>Auto</b> .

### 5-3-9 CXL Common Options

Parameter	Description
CXL Common Options	
CXL Control	Options available: Auto, Enabled, Disabled. Default setting is <b>Auto</b> .
CXL SPM	Options available: Auto, Enabled, Disabled. Default setting is <b>Auto</b> .
CXL Encryption	Options available: Enabled, Disabled. Default setting is <b>Disabled</b> .
Temp Gen5 Advertisement	Options available: Disable, Enable, Auto. Default setting is <b>Auto</b> .
Sync Header Bypass	Options available: Auto, Enabled, Disabled. Default setting is <b>Auto</b> .
CXL RAS	<p>Press [Enter] for configuration of advanced items.</p> <ul style="list-style-type: none"> <li>◆ CXL Protocol Error Reporting <ul style="list-style-type: none"> <li>- Options available: Disabled, SameAsPcieAer, ForceAerFwFirstIfCxlPresent. Default setting is <b>SameAsPcieAer</b>.</li> </ul> </li> <li>◆ CXL Component Error Reporting <ul style="list-style-type: none"> <li>- Options available: OS First, FW-First. Default setting is <b>FW-First</b>.</li> </ul> </li> </ul>

## 5-4 AMD PBS Menu

AMD PBS Option menu displays submenu options for configuring the function of AMD PBS. Select a submenu item, then press [Enter] to access the related submenu screen.

Parameter	Description
RAS	Press [Enter] for configuration of advanced items.
SPI Locking	Enable/Disable SPI Locking for protect ROM part. Options available: Disabled, Enabled. Default setting is <b>Disabled</b> .
CXL Range Encryption	Press [Enter] for configuration of advanced items. <ul style="list-style-type: none"> <li>◆ Range1/2/3 <ul style="list-style-type: none"> <li>– Configure the Range 1/2/3 Memory Base.</li> <li>– Configure the Range 1/2/3 Memory Limit.</li> </ul> </li> <li>◆ Start CXL Range Encryption</li> </ul>

## 5-4-1 RAS

Parameter	Description
RAS Periodic SMI Control	Enable/Disable the Periodic SMI for polling [MCA Threshold] error. Options available: Disabled, Enabled. Default setting is <b>Enabled</b> .
SMI Threshold	Configures the SMI Threshold value.
SMI Scale	Configures the SMI Scale value.
SMI Scale Unit	Defines the unit of time scale. Options available: millisecond, second, minute. Default setting is <b>millisecond</b> .
SMI Period	Configures the SMI Period.
GHES Notify Type	Selects the Notification type for deferred/ corrected errors. Options available: Polled, SCI. Default setting is <b>Polled</b> .
GHES UnCorr Notify Type	Selects the Notification type for uncorrected errors. Options available: Polled, NMI. Default setting is <b>NMI</b> .
PCIe GHES Notify Type	Selects the Notification type for PCIe corrected errors. Options available: Polled, SCI. Default setting is <b>Polled</b> .
PCIe UnCorr GHES Notify Type	Selects the Notification type for PCIe uncorrected errors. Options available: Polled, NMI. Default setting is <b>NMI</b> .
PCIe Root Port Corr Err Mask Reg	Initialize the PCIe AER Corrected Error Mask register of Root Port.

Parameter	Description
PCIe Root Port UnCorr Err Mask Reg	Initialize the PCIe AER Uncorrected Error Mask register of Root Port.
PCIe Root Port UnCorr Err Sev Reg	Initialize the PCIe AER Uncorrected Error Severity register of Root Port.
PCIe Device Corr Err Mask Reg	Initialize the PCIe AER Corrected Error Mask register of PCIe device.
PCIe Device UnCorr Err Mask Reg	Initialize the PCIe AER Uncorrected Error Mask register of PCIe device.
PCIe Device UnCorr Err Sev Reg	Initialize the PCIe AER Uncorrected Error Severity register of PCIe device.
CXL DP CIE Mask Enable	Enable/Disable masking of CXL DP Correctable Error - Internal Error. Options available: Disabled, Enabled. Default setting is <b>Enabled</b> .
DRAM Hard Post Package Repair	This feature allows spare DRAM rows to replace malfunctioning rows via an in-field repair mechanism. Options available: Disabled, Enabled. Default setting is <b>Disabled</b> .
HEST DMC Structure Support	HEST DMC (Deferred Machine Check) Structure Support. Options available: Disabled, Enabled. Default setting is <b>Disabled</b> .
CXL Error Report Support	Enable/Disable CXL Error Reporting. Options available: Disabled, Enabled. Default setting is <b>Disabled</b> .

## 5-5 Chipset Setup Menu

Chipset Setup menu displays submenu options for configuring the function of the North Bridge. Select a submenu item, then press <Enter> to access the related submenu screen.

Parameter	Description
PCIe Link Training Type	Options available: 1 Step, 2 Step. Default setting is <b>1 Step</b> .
PCIe Compliance Mode	Options available: Off, On. Default setting is <b>Off</b> .
Program All VR	Enable/Disable program all VR on MB. Options available: Disabled, Enabled. Default setting is <b>Enabled</b> .
North Bridge	Press [Enter] for configuration of advanced items.
Fabric Resource	Press [Enter] for configuration of advanced items.

# 5-5-1 North Bridge

Parameter	Description
North Bridge Configuration	
Memory Information	
Total Memory	Displays the total memory information.
CPU 0 Information	Press [Enter] to view information related to CPU 0.

## 5-5-2 Fabric Resource

Aptio Setup - AMI  
Chipset

Fabric Resource

CPU0 NBIO0:  
Base Bus: 0x00

Parameter	Description
Fabric Resource	
CPU 0 NBIO_# PCIe Bus Number	Change CPU 0 NBIO_# PCIe Bus Number.
Prefetchable Mmio Above 4G size	Change CPU 0 NBIO_# Prefetchable MMIO Above 4G Size. Options available: System Default, 0, 1G, 2G, 4G, 8G, 16G, 32G, 64G, 128G, 256G, 512G, 1T, 2T, 4T, 8T. Default setting is <b>System Default</b> .
PCIe IO Resource	Change CPU 0 NBIO_# PCIe IO Resource.

## 5-6 Server Management Menu

Parameter	Description
FRB-2 Timer	Enable/Disable FRB-2 timer (POST timer). Default setting is <b>Enabled</b> .
FRB-2 Timer timeout	Configures the FRB2 Timer timeout. Options available: 3 minutes, 4 minutes, 5 minutes, 6 minutes. Default setting is <b>6 minutes</b> .
FRB-2 Timer Policy	Configures the FRB2 Timer policy. Options available: Do Nothing, Reset, Power Down, Power Cycle. Default setting is <b>Do Nothing</b> .
OS Watchdog Timer	Enable/Disable OS Watchdog Timer function. Options available: Enabled, Disabled. Default setting is <b>Disabled</b> .
OS Wtd Timer Timeout <sup>(Note)</sup>	Configures OS Watchdog Timer. Options available: 5 minutes, 10 minutes, 15 minutes, 20 minutes. Default setting is <b>10 minutes</b> .
OS Wtd Timer Policy <sup>(Note)</sup>	Configure OS Watchdog Timer Policy. Options available: Do Nothing, Reset, Power Down, Power Cycle. Default setting is <b>Reset</b> .
Wait BMC Ready	Post wait BMC ready and reboot system. Options available: Disabled, 2 minutes, 4 minutes, 6 minutes. Default setting is <b>2 minutes</b> .

(Note) This item is configurable when **OS Watchdog Timer** is set to **Enabled**.

<b>Parameter</b>	<b>Description</b>
System Event Log	Press [Enter] to configure advanced items.
View FRU Information	Press [Enter] to view the FRU information.
BMC network configuration	Press [Enter] to configure advanced items.
IPv6 BMC Network Configuration	Press [Enter] to configure advanced items.

## 5-6-1 System Event Log

Parameter	Description
Enabling / Disabling Options	
SEL Components	Change this item to enable or disable all features of System Event Logging during boot. Options available: Disabled, Enabled. Default setting is <b>Enabled</b> .
Erasing Settings	
Erase SEL	Choose options for erasing SEL. Options available: No/Yes, On next reset/Yes, On every reset. Default setting is <b>No</b> .
When SEL is Full	Choose options for reactions to a full SEL. Options available: Do Nothing, Erase Immediately. Default setting is <b>Do Nothing</b> .
Custom EFI Logging Options	
Log EFI Status Codes	Enable/Disable the logging of EFI Status Codes (if not already converted to legacy). Options available: Disabled, Both, Error code, Progress code. Default setting is <b>Error code</b> .

## 5-6-2 View FRU Information

The FRU page is a simple display page for basic system ID information, as well as System product information. Items on this window are non-configurable.

(Note) The model name will vary depends on the product you purchased

### 5-6-3 BMC Network Configuration

Parameter	Description
BMC network configuration	
Lan Channel 1	
Configuration Address source	Selects to configure LAN channel parameters statically or dynamically (DHCP). Do nothing option will not modify any BMC network parameters during BIOS phase. Options available: Unspecified, Static, DynamicBmcDhcp. Default setting is <b>DynamicBmcDhcp</b> .
Station IP address	Displays IP Address information.
Subnet mask	Displays Subnet Mask information. Please note that the IP address must be in three digitals, for example, 192.168.000.001.
Router IP address	Displays the Router IP Address information.
Station MAC address	Displays the MAC Address information.
VLAN Support	Set BMC to enable/disable VLAN support. Options available: Enabled, Disabled. Default setting is <b>Disabled</b> .
Real-time synchronize BMC network parameter values	Press [Enter] will set Address source(Static/DHCP) to BMC and then get Station IP address, Subnet mask and Router IP address from BMC.

## 5-6-4 IPv6 BMC Network Configuration

Parameter	Description
IPv6 BMC network configuration	
IPv6 BMC Lan Channel 1	
IPv6 BMC Lan Option	Enable/Disable IPv6 BMC LAN channel function. When this item is disabled, the system will not modify any BMC network during BIOS phase. Options available: Unspecified, Disable, Enable. Default setting is <b>Enable</b> .
IPv6 BMC Lan IP Address Source	Selects to configure LAN channel parameters statically or dynamically (by BIOS or BMC). Options available: Unspecified, Static, Dynamic-Obtained by BMC running DHCP. Default setting is <b>Dynamic-Obtained by BMC running DHCP</b> .
IPv6 BMC Lan IP Address/Prefix Length	Check if the IPv6 BMC LAN IP address matches those displayed on the screen.

# 5-7 Security Menu

The Security menu allows you to safeguard and protect the system from unauthorized use by setting up access passwords.

There are two types of passwords that you can set:

- Administrator Password  
Entering this password will allow the user to access and change all settings in the Setup Utility.
- User Password  
Entering this password will restrict a user's access to the Setup menus. To enable or disable this field, a Administrator Password must first be set. A user can only access and modify the System Time, System Date, and Set User Password fields.

Parameter	Description
Administrator Password	Press [Enter] to configure the administrator password.
User Password	Press [Enter] to configure the user password.
Secure Boot	Press [Enter] to configure advanced items.

## 5-7-1 Secure Boot

The Secure Boot submenu is applicable when your device is installed the Windows® 8 (or above) operating system.

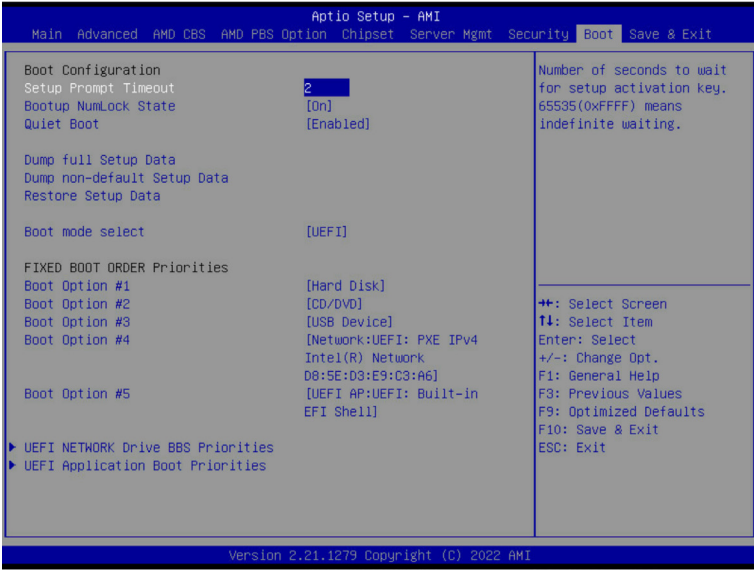

Parameter	Description
System Mode	Displays if the system is in User mode or Setup mode.
Secure Boot	Enable/ Disable the Secure Boot function. Options available: Enabled, Disabled. Default setting is <b>Disabled</b> .
Secure Boot Mode <sup>(Note)</sup>	Secure Boot requires all the applications that are running during the booting process to be pre-signed with valid digital certificates. This way, the system knows all files being loaded before Windows loads to the login screen have not been tampered with. When set to Standard, it will automatically load the Secure Boot keys from the BIOS databases. When set to Custom, you can customize the Secure Boot settings and manually load its keys from the BIOS database. Options available: Standard, Custom. Default setting is <b>Standard</b> .
Restore Factory Keys	Forces the system to user mode and installs factory default Secure Boot key database.
Reset To Setup Mode	Press [Enter] to reset the system mode to Setup mode.
Enter Audit Mode	Press [Enter] to set the system mode to audit mode.

(Note) Advanced items prompt when this item is set to **Custom**.

Parameter	Description
Key Management	<p data-bbox="329 156 659 180">Press [Enter] to configure advanced items.</p> <p data-bbox="329 185 936 235"><b>Please note that this item is configurable when Secure Boot Mode is set to Custom.</b></p> <ul style="list-style-type: none"> <li data-bbox="329 243 946 352">◆ Factory Key Provision <ul style="list-style-type: none"> <li data-bbox="361 266 946 321">– Allows to provision factory default Secure Boot keys when system is in Setup Mode.</li> <li data-bbox="361 326 904 352">– Options available: Enabled, Disabled. # 5-8 Boot Menu

The Boot menu allows you to set the drive priority during system boot-up. BIOS setup will display an error message if the legacy drive(s) specified is not bootable.

Parameter	Description
Boot Configuration	
Setup Prompt Timeout	Number of seconds to wait for setup activation key. 65535 (0xFFFF) means indefinite waiting. Press the numeric keys to input the desired values.
Bootup NumLock State	Enable/Disable the Bootup NumLock function. Options available: On, Off. Default setting is <b>On</b> .
Quiet Boot	Enable/Disable showing the logo during POST. Options available: Enabled, Disabled. Default setting is <b>Enabled</b> .
Dump full Setup Data	Press [Enter] to dump full setup data to file.
Dump non-default Setup Data	Press [Enter] to dump non-default setup data to file.
Restore Setup Data	Press [Enter] to restore setup data from file (cJson format).
Boot mode select	Selects the boot mode. Options available: LEGACY, UEFI. Default setting is <b>UEFI</b> .

Parameter	Description
FIXED BOOT ORDER Priorities	
Boot Option #1 / #2 / #3 / #4 / #5	<p>Press [Enter] to configure the boot priority. By default, the server searches for boot devices in the following sequence:</p> <ol style="list-style-type: none"><li>1. Hard drive.</li><li>2. CD-COM/DVD drive.</li><li>3. USB device.</li><li>4. Network.</li><li>5. UEFI.</li></ol>
UEFI Network Drive BBS Priorities	Press [Enter] to configure the boot priority.
UEFI Application Boot Priorities	Press [Enter] to configure the boot priority.

## 5-9 Save & Exit Menu

The Save & Exit menu displays the various options to quit from the BIOS setup. Highlight any of the exit options then press <Enter>.

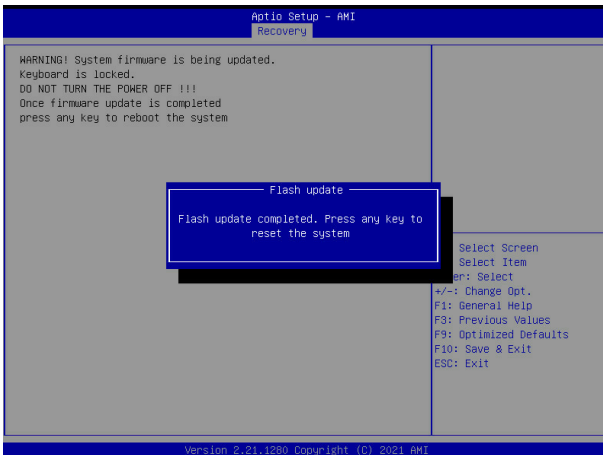

Parameter	Description
Save Options	
Save Changes and Exit	Saves changes made and closes the BIOS setup. Options available: Yes, No.
Discard Changes and Exit	Discards changes made and exits the BIOS setup. Options available: Yes, No.
Save Changes	Saves changes done so far to any of the setup options. Options available: Yes, No.
Default Options	
Restore Defaults	Loads the default settings for all BIOS setup parameters. Setup Defaults are quite demanding in terms of resources consumption. If you are using low-speed memory chips or other kinds of low-performance components and you choose to load these settings, the system might not function properly. Options available: Yes, No.
Boot Override	Press [Enter] to configure the device as the boot-up drive.
Launch EFI Shell from filesystem device	Attempts to Launch EFI Shell application (Shell.efi) from one of the available file system devices.

# 5-10 BIOS Recovery

The system has an embedded recovery technique. In the event that the BIOS becomes corrupt the boot block can be used to restore the BIOS to a working state. To restore your BIOS, please follow the instructions listed below:

Recovery Instruction:

1. Copy the XXX.rom to USB diskette.
2. Setting BIOS Recovery jump to enabled status.
3. Boot into BIOS recovery.
4. Run Proceed with flash update.
5. BIOS updated.

## 5-11 BIOS POST Beep code (AMI standard)

### 5-11-1 PEI Beep Codes

# of Beeps	Description
1	Memory not Installed.
1	Memory was installed twice (InstallPeiMemory routine in PEI Core called twice)
2	Recovery started
3	DXE IPL was not found
3	DXE Core Firmware Volume was not found
4	Recovery failed
4	S3 Resume failed
7	Reset PPI is not available

### 5-11-2 DXE Beep Codes

# of Beeps	Description
1	Invalid password
4	Some of the Architectural Protocols are not available
5	No Console Output Devices are found
5	No Console Input Devices are found
6	Flash update is failed
7	Reset protocol is not available
8	Platform PCI resource requirements cannot be met
