## Server Warnings and Cautions

Before installing a server, be sure that you understand the following warnings and cautions.

### WARNING!

**To reduce the risk of electric shock or damage to the equipment:**

- Do not disable the power cord grounding plug. The grounding plug is an important safety feature.
- Plug the power cord into a grounded (earthed) electrical outlet that is easily accessible at all times.
- Unplug the power cord from the power supply to disconnect power to the equipment.
- Do not route the power cord where it can be walked on or pinched by items placed against it. Pay particular attention to the plug, electrical outlet, and the point where the cord extends from the server.

### WARNING!

**To reduce the risk of personal injury from hot surfaces, allow the drives and the internal system components to cool before touching them.**

### WARNING!

**This server is equipped with high speed fans. Keep away from hazardous moving fan blades during servicing.**

### CAUTION!

- Do not operate the server for long periods with the access panel open or removed. Operating the server in this manner results in improper airflow and improper cooling that can lead to thermal damage.
- Danger of explosion if battery is incorrectly replaced.
- Replace only with the same or equivalent type recommended by the manufacturer.
- Dispose of used batteries according to the manufacturer's instructions.

## Electrostatic Discharge (ESD)

### CAUTION!

ESD CAN DAMAGE DRIVES, BOARDS, AND OTHER PARTS. WE RECOMMEND THAT YOU PERFORM ALL PROCEDURES AT AN ESD WORKSTATION. IF ONE IS NOT AVAILABLE, PROVIDE SOME ESD PROTECTION BY WEARING AN ANTI-STATIC WRIST STRAP ATTACHED TO CHASSIS GROUND -- ANY UNPAINTED METAL SURFACE -- ON YOUR SERVER WHEN HANDLING PARTS.

Always handle boards carefully. They can be extremely sensitive to ESD. Hold boards only by their edges without any component and pin touching. After removing a board from its protective wrapper or from the system, place the board component side up on a grounded, static free surface. Use a conductive foam pad if available but not the board wrapper. Do not slide board over any surface.

**System power on/off:** To remove power from system, you must remove the system from rack. Make sure the system is removed from the rack before opening the chassis, adding, or removing any non hot-plug components.

**Hazardous conditions, devices and cables:** Hazardous electrical conditions may be present on power, telephone, and communication cables. Turn off the system and disconnect the cables attached to the system before servicing it. Otherwise, personal injury or equipment damage can result.

**Electrostatic discharge (ESD) and ESD protection:** ESD can damage drives, boards, and other parts. We recommend that you perform all procedures in this chapter only at an ESD workstation. If one is not available, provide some ESD protection by wearing an antistatic wrist strap attached to chassis ground (any unpainted metal surface on the server) when handling parts.

**ESD and handling boards:** Always handle boards carefully. They can be extremely sensitive to electrostatic discharge (ESD). Hold boards only by their edges. After removing a board from its protective wrapper or from the system, place the board component side up on a grounded, static free surface. Use a conductive foam pad if available but not the board wrapper. Do not slide board over any surface.

**Installing or removing jumpers:** A jumper is a small plastic encased conductor that slips over two jumper pins. Some jumpers have a small tab on top that can be gripped with fingertips or with a pair of fine needle nosed pliers. If the jumpers do not have such a tab, take care when using needle nosed pliers to remove or install a jumper; grip the narrow sides of the jumper with the

pliers, never the wide sides. Gripping the wide sides can damage the contacts inside the jumper, causing intermittent problems with the function controlled by that jumper. Take care to grip with, but not squeeze, the pliers or other tool used to remove a jumper, or the pins on the board may bend or break.

**CAUTION!**

Risk of explosion if battery is replaced incorrectly or with an incorrect type. Replace the battery only with the same or equivalent type recommended by the manufacturer. Dispose of used batteries according to the manufacturer's instructions.

# Chapter 1 Hardware Installation

## 1-1 Installation Precautions

The motherboard/system contain numerous delicate electronic circuits and components which can become damaged as a result of electrostatic discharge (ESD). Prior to installation, carefully read the service guide and follow these procedures:

- Prior to installation, do not remove or break motherboard S/N (Serial Number) sticker or warranty sticker provided by your dealer. These stickers are required for warranty validation.
- Always remove the AC power by unplugging the power cord from the power outlet before installing or removing the motherboard or other hardware components.
- When connecting hardware components to the internal connectors on the motherboard, make sure they are connected tightly and securely.
- When handling the motherboard, avoid touching any metal leads or connectors.
- It is best to wear an electrostatic discharge (ESD) wrist strap when handling electronic components such as a motherboard, CPU or memory. If you do not have an ESD wrist strap, keep your hands dry and first touch a metal object to eliminate static electricity.
- Prior to installing the motherboard, please have it on top of an antistatic pad or within an electrostatic shielding container.
- Before unplugging the power supply cable from the motherboard, make sure the power supply has been turned off.
- Before turning on the power, make sure the power supply voltage has been set according to the local voltage standard.
- Before using the product, please verify that all cables and power connectors of your hardware components are connected.
- To prevent damage to the motherboard, do not allow screws to come in contact with the motherboard circuit or its components.
- Make sure there are no leftover screws or metal components placed on the motherboard or within the computer casing.
- Do not place the computer system on an uneven surface.
- Do not place the computer system in a high-temperature environment.
- Turning on the computer power during the installation process can lead to damage to system components as well as physical harm to the user.
- If you are uncertain about any installation steps or have a problem related to the use of the product, please consult a certified computer technician.

## Chapter 3 System Hardware Installation

### Pre-installation Instructions

Computer components and electronic circuit boards can be damaged by discharges of static electricity. Working on computers that are still connected to a power supply can be extremely dangerous. Follow the simple guidelines below to avoid damage to your computer or injury to yourself.

- Always disconnect the computer from the power outlet whenever you are working inside the computer case.
- If possible, wear a grounded wrist strap when you are working inside the computer case. Alternatively, discharge any static electricity by touching the bare metal system of the computer case, or the bare metal body of any other grounded appliance.
- Hold electronic circuit boards by the edges only. Do not touch the components on the board unless it is necessary to do so. Do not flex or stress the circuit board.
- Leave all components inside the static-proof packaging until you are ready to use the component for the installation.

### 3-1 Removing the System Cover

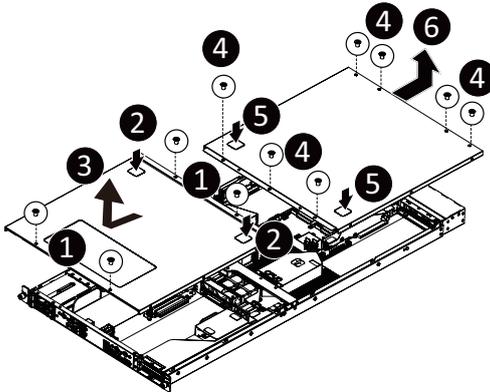

Before you remove or install the system cover

- Make sure the system is not turned on or connected to AC power.

#### Follow these instructions to remove the system covers:

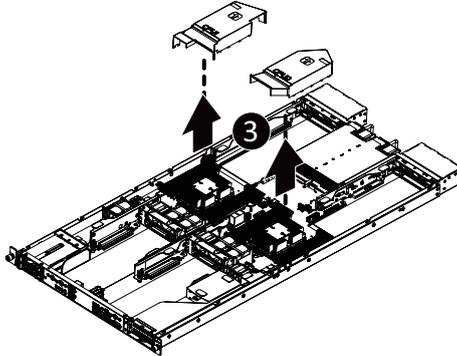

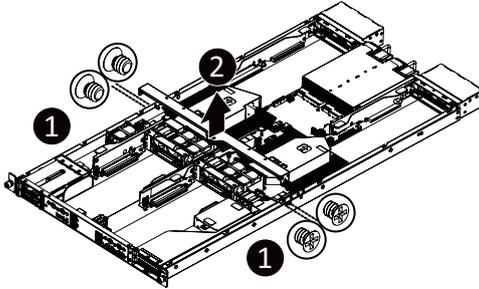

1. Loosen and remove the screw securing the front cover.
2. Push down on the indentations located on the side of the chassis cover
3. Slide the cover to the front of the system and then remove the cover in the direction of the arrow.
4. Loosen and remove the screw securing the rear cover.
5. Push down on the indentations located on the side of the chassis cover.
6. Slide the chassis cover to the rear of the system and then remove the cover in the direction of the arrow.
7. To reinstall the chassis cover follow steps 1-6 in reverse order.

## 3-2 Removing and Installing the CPU Fan Duct

Follow these instructions to remove the fan duct:

1. Remove the screws securing the fan cage bracket.
2. Lift up to remove the fan cage bracket.
3. Lift up to remove the CPU fan duct.
4. To reinstall the fan duct, align the fan duct with the guiding groove. Push down the fan duct until it is firmly seated on the system.

### 3-3 Removing and Installing the CPU and Heat Sink

Read the following guidelines before you begin to install the CPU:

Make sure that the motherboard supports the CPU.

Always turn off the system and unplug the power cord from the power outlet before installing the CPU to prevent hardware damage.

Unplug all cables from the power outlets.

Disconnect all telecommunication cables from their ports.

Place the system unit on a flat and stable surface.

Open the system according to the instructions.

#### **WARNING!**

Failure to properly turn off the server before you start installing components may cause serious damage. Do not attempt the procedures described in the following sections unless you are a qualified service technician.

#### **Follow these instructions to install the CPU:**

1. Align the processor to the carrier so that the gold triangle on the processor aligns with the triangle on the carrier, and then install the processor into the carrier.

**NOTE:** Apply thermal compound evenly on the top of the CPU.

2. Carefully flip the heatsink over. Align the carrier assembly so that the triangle on the carrier aligns with the triangle on the heatsink, and then install the carrier assembly onto the bottom of the heatsink.

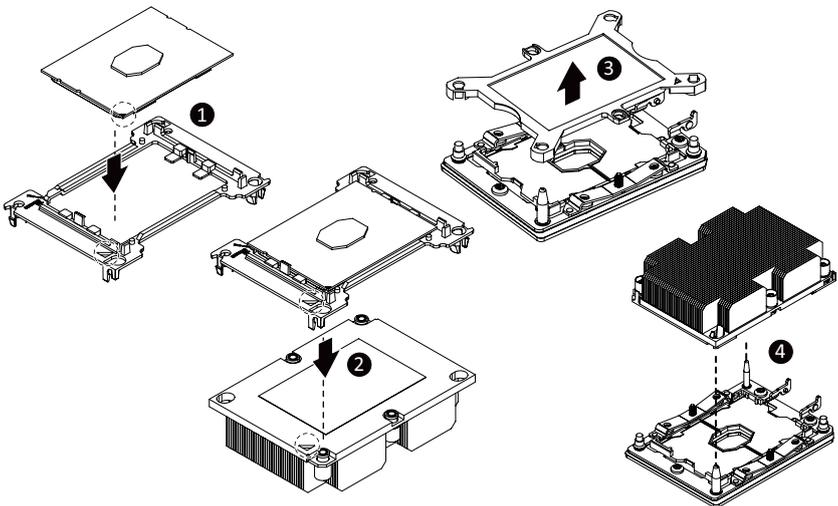

3. Remove the CPU socket cover.

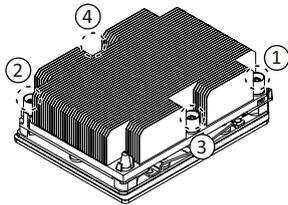

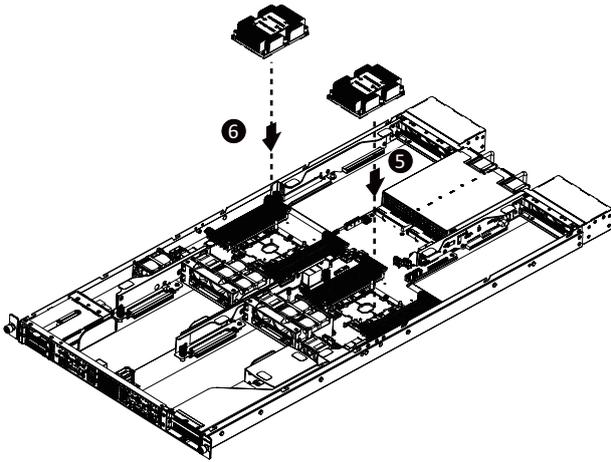

**NOTE:** Save and replace the CPU socket cover if the processor is removed from its socket.

4. Align the heatsink to the CPU socket using the guide pins and make sure the gold triangle is in the correct orientation. Then place the heatsink onto the top of the CPU socket.

5. Secure the heatsink by tightening the screws in sequential order (1→2→3→4).

**NOTE:** When removing the heatsink, loosen the screws in reverse order (4→3→2→1).

### 3-4 Removing and Installing Memory

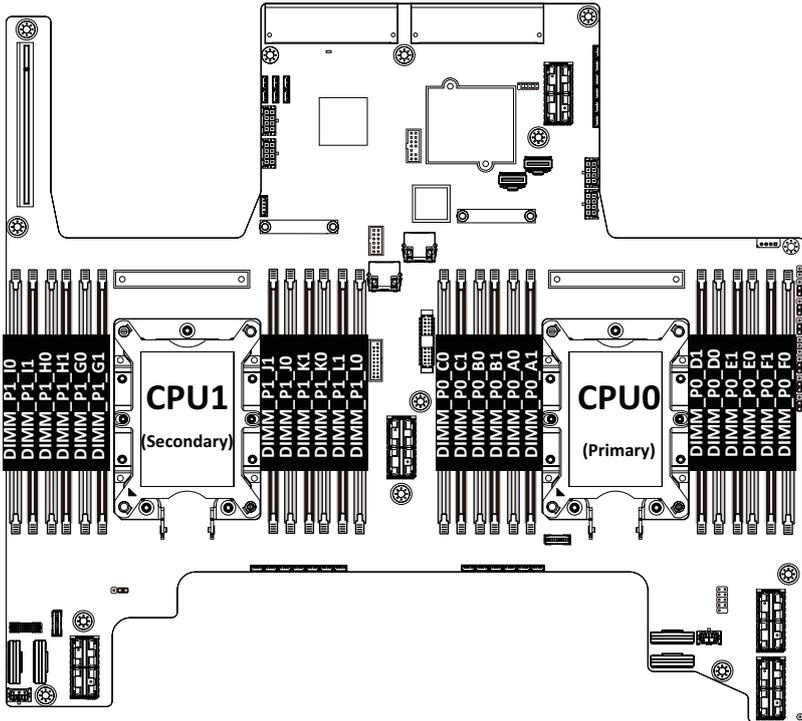

Read the following guidelines before you begin to install the memory:

- Make sure that the motherboard supports the memory. It is recommended that memory of the same capacity, brand, speed, and chips be used.
- Always turn off the computer and unplug the power cord from the power outlet before installing the memory to prevent hardware damage.
- Memory modules have a foolproof design. A memory module can be installed in only one direction. If you are unable to insert the memory, switch the direction.

#### 3-4-1 Six-Channel Memory Configuration

This motherboard provides 24 DDR4 memory sockets and supports Six Channel Technology. After the memory is installed, the BIOS will automatically detect the specifications and capacity of the memory.

### 3-4-2 Removing and Installing a Memory Module

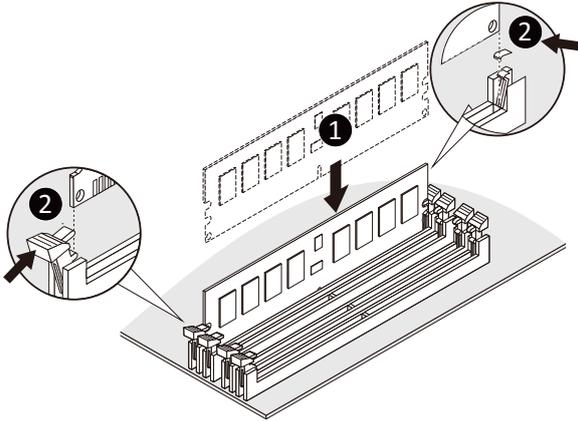

Before installing a memory module, make sure to turn off the computer and unplug the power cord from the power outlet to prevent damage to the memory module.

Be sure to install DDR4 DIMMs on to this motherboard.

**Follow these instructions to install a DIMM module:**

1. Insert the DIMM memory module vertically into the DIMM slot and push it down.
2. Close the plastic clip at both edges of the DIMM slots to lock the DIMM module.
3. Reverse the installation steps when you want to remove the DIMM module.

**3-4-3 DIMM Population Table**

### 3-4-4 Intel Optane DCPMM DIMM Population Rule

Thermal conditions for DCPMM DIMM support:

- The ambient temperature must be at or below 35°C
- The Cascade Lake CPU used must have a maximum TDP of 165W
- A maximum of 12 pcs 256G DCPMM may be installed

- RDIMM / DCPMM must be installed into CPU0 memory first
- You must install one RDIMM into any slot #0 of CPU0 before installing the DCPMM. (e.g. A0/B0/C0/D0/E0/F0/G0/H0/I0/J0/K0/L0)
- The DCPMM must be installed into the DIMM slot #1 next to the corresponding RDIMM in slot #0 (e.g. if RDIMM is installed into DIMM slot A0, the DCPMM must be installed into DIMM slot A1)

### 3-5 Installing the GPU Card

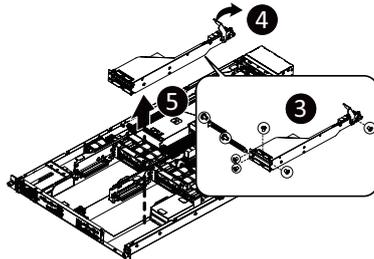

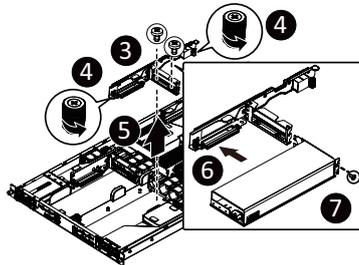

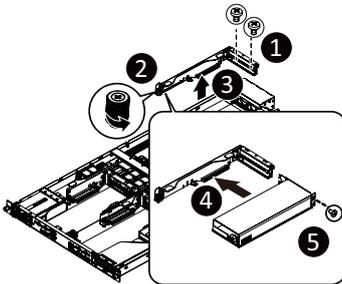

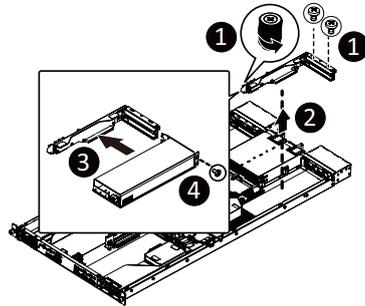

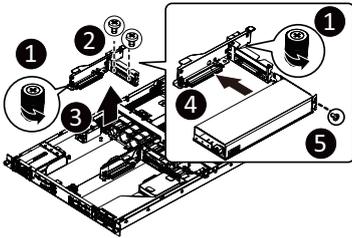

Before you install the GPU card:

Voltages can be present within the server whenever an AC power source is connected. This voltage is present even when the main power switch is in the off position. Ensure that the system is powered down and all power sources have been disconnected from the server prior to installing a GPU card. Make sure the system is not turned on or connected to AC power.

Failure to observe these warnings could result in personal injury or damage to the equipment.

**Follow these instructions to install the GPU card:**

1. Remove the three screws securing the GPU card bracket.
2. Loosen the thumbscrews securing the GPU card bracket.
3. Slightly lift the GPU card bracket up in the direction indicated as shown in the image below.
4. Insert the GPU card into the selected slot. Make sure the GPU card is properly seated.
5. Install the two screws to secure the GPU card in place.
6. Install the three screws to secure the GPU card bracket in place.

## 3-6 Removing and Installing the Hard Disk Drive

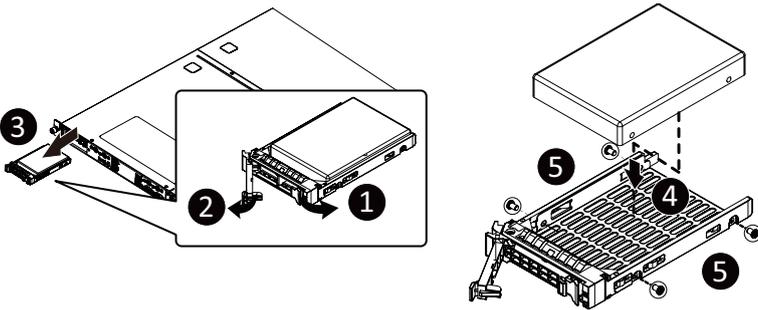

Read the following guidelines before you begin to install the hard disk drive:

- Take note of the drive tray orientation before sliding it out.
- The tray will not fit back into the bay if it is inserted incorrectly.
- Make sure that the HDD is connected to the HDD connector on the backplane.

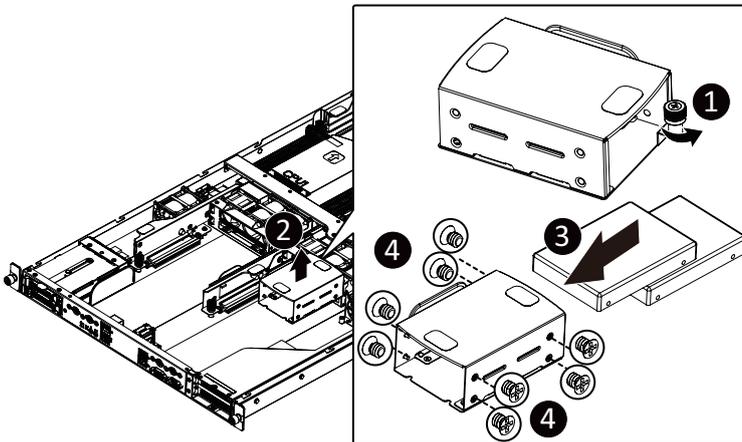

**Follow these instructions to install a hard disk drive:**

1. Press the release button.
2. Extend the locking lever.
3. Pull the locking lever in the direction of the arrow to remove the HDD tray.
4. Slide the hard disk into the HDD tray.
5. Install 4 screws to secure the hard drive to the HDD tray.
6. Reinsert the HDD tray into the slot and close the locking lever.

**Follow these instructions to install a hard disk drive:**

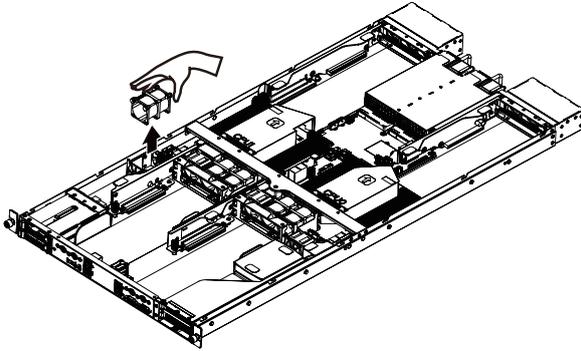

1. Loosen the thumbscrews securing the HDD cage.
2. Remove the screw securing the HDD cage.
3. Slide the hard disk into the HDD cage.
4. Install 4 screws to secure the hard drive to the HDD cage.

## 3-7 Replacing the Fan Assembly

Follow these instructions to replace a fan assembly:

1. Flip the latches on the top of the fan outwards.
2. Using the latches, lift up the fan assembly from the chassis.
3. Reverse the previous steps to install the replacement fan assembly.

## 3-8 Removing and Installing the Power Supply

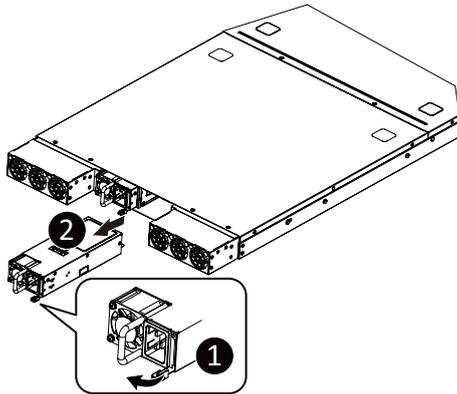

Before you remove or install the power supply unit:

- Make sure the system is not turned on or connected to AC power.

**Follow these instructions to replace the power supply:**

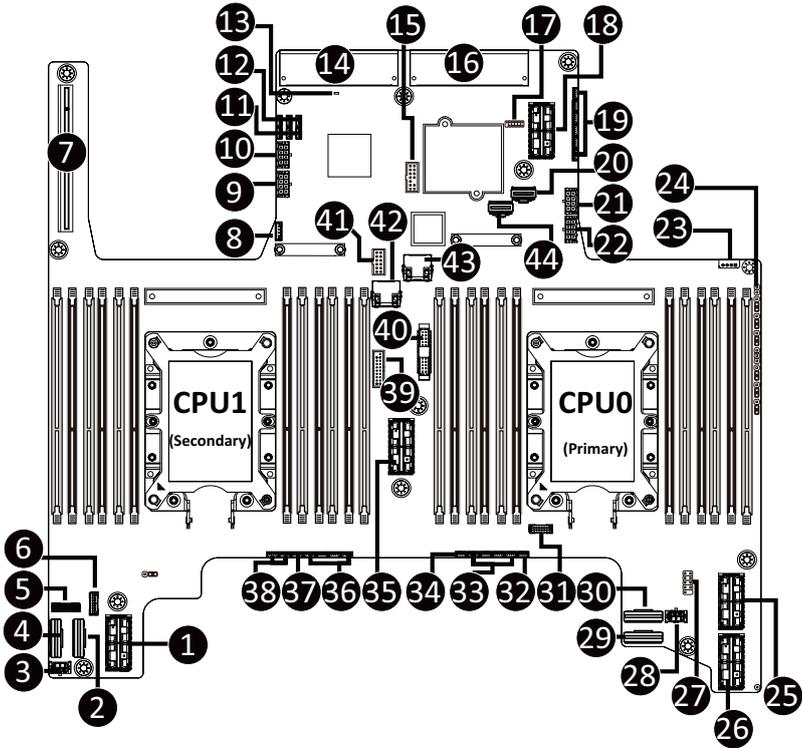

1. Press the retaining clip on the left side of the power supply unit along the direction of the arrow.
2. Pull the power supply handle at the same time and pull out the power supply unit.
3. Insert the replacement power supply unit firmly into the chassis. Connect the AC power cord to the replacement power supply.
4. Repeat steps 1-3 for replacement of the second power supply.

## Chapter 5 BIOS Setup

BIOS (Basic Input and Output System) records hardware parameters of the system in the EFI on the motherboard. Its major functions include conducting the Power-On Self-Test (POST) during system startup, saving system parameters and loading operating system, etc. BIOS includes a BIOS Setup program that allows the user to modify basic system configuration settings or to activate certain system features. When the power is turned off, the battery on the motherboard supplies the necessary power to the CMOS to keep the configuration values in the CMOS.

To access the BIOS Setup program, press the <DEL> key during the POST when the power is turned on.

- BIOS flashing is potentially risky, if you do not encounter problems of using the current BIOS version, it is recommended that you don't flash the BIOS. To flash the BIOS, do it with caution. Inadequate BIOS flashing may result in system malfunction.
- It is recommended that you not alter the default settings (unless you need to) to prevent system instability or other unexpected results. Inadequately altering the settings may result in system's failure to boot. If this occurs, try to clear the CMOS values and reset the board to default values. (Refer to the **Exit** section in this chapter or introductions of the battery/clearing CMOS jumper in Chapter 1 for how to clear the CMOS values.)

■ **Main**

This setup page includes all the items in standard compatible BIOS.

■ **Advanced**

This setup page includes all the items of AMI BIOS special enhanced features.

(ex: Auto detect fan and temperature status, automatically configure hard disk parameters.)

■ **Chipset**

This setup page includes all the submenu options for configuring the function of processor, network, North Bridge, South Bridge, and System event logs.

■ **Server Management**

Server additional features enabled/disabled setup menus.

■ **Security**

Change, set, or disable supervisor and user password. Configuration supervisor password allows you to restrict access to the system and BIOS Setup.

A supervisor password allows you to make changes in BIOS Setup.

A user password only allows you to view the BIOS settings but not to make changes.

■ **Boot**

This setup page provides items for configuration of boot sequence.

■ **Save & Exit**

Save all the changes made in the BIOS Setup program to the CMOS and exit BIOS Setup. (Pressing <F10> can also carry out this task.)

Abandon all changes and the previous settings remain in effect. Pressing <Y> to the confirmation message will exit BIOS Setup. (Pressing <Esc> can also carry out this task.)

# 5-1 The Main Menu

Once you enter the BIOS Setup program, the Main Menu (as shown below) appears on the screen. Use arrow keys to move among the items and press <Enter> to accept or enter other sub-menu.

## Main Menu Help

The on-screen description of a highlighted setup option is displayed on the bottom line of the Main Menu.

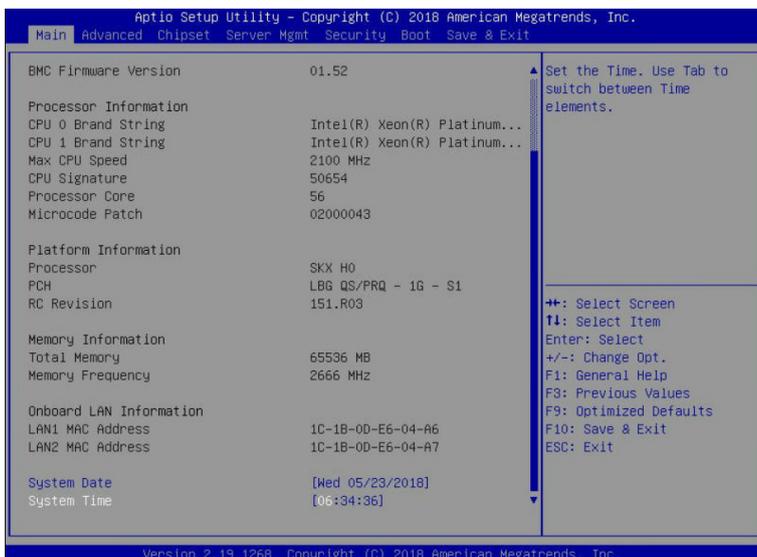

## Submenu Help

While in a submenu, press <F1> to display a help screen (General Help) of function keys available for the menu. Press <Esc> to exit the help screen. Help for each item is in the Item Help block on the right side of the submenu.

- When the system is not stable as usual, select the **Restore Defaults** item to set your system to its defaults.
- The BIOS Setup menus described in this chapter are for reference only and may differ by BIOS version.

| IPv6 BMC Lan IP Address/Prefix Length | Check if the IPv6 BMC LAN IP address matches those displayed on the screen.   |

# 5-5 Security Menu

The Security menu allows you to safeguard and protect the system from unauthorized use by setting up access passwords.

There are two types of passwords that you can set:

- Administrator Password  
Entering this password will allow the user to access and change all settings in the Setup Utility.
- User Password  
Entering this password will restrict a user's access to the Setup menus. To enable or disable this field, a Administrator Password must first be set. A user can only access and modify the System Time, System Date, and Set User Password fields.

| Parameter              | Description  |
|------------------------|--|
| Administrator Password | Press [Enter] to configure the administrator password. |
| User Password          | Press [Enter] to configure the user password.          |
| Secure Boot            | Press [Enter] to configure advanced items.             |

## 5-5-1 Secure Boot

The Secure Boot submenu is applicable when your device is installed the Windows® 8 (or above) operating system.

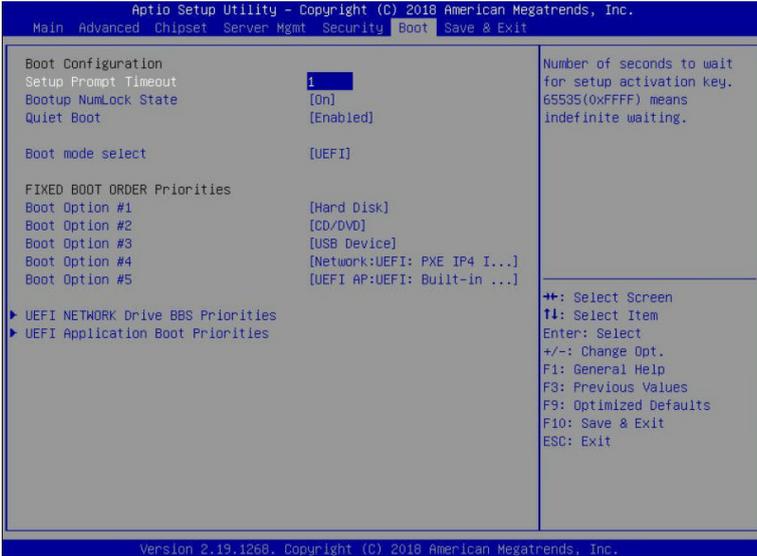

| Parameter                          | Description   |
|------------------------------------|---|
| System Mode                        | Displays the system is in User mode or Setup mode.  |
| Secure Boot                        | Displays the Secure Boot function is active or not active.  |
| Vendor Keys                        | Displays the Vendor Keys function is active or not active.  |
| Attempt Secure Boot                | Secure Boot activated when Platform Key (PK) is enrolled, System mode is User/Deployed, and CSM function is disabled.<br>Options available: Enabled/Disabled. Default setting is <b>Disabled</b> .  |
| Secure Boot Mode <sup>(Note)</sup> | Secure Boot requires all the applications that are running during the booting process to be pre-signed with valid digital certificates. This way, the system knows all the files being loaded before Windows loads and gets to the login screen have not been tampered with.<br>When set to Standard, it will automatically load the Secure Boot keys form the BIOS databases.<br>When set to Custom, you can customize the Secure Boot settings and manually load its keys from the BIOS database.<br>Options available: Standard/Custom. Default setting is Custom. |

(Note) Advanced items prompt when this item is set to **Custom**.

## 5-6 Boot Menu

The Boot menu allows you to set the drive priority during system boot-up. BIOS setup will display an error message if the legacy drive(s) specified is not bootable.

| Parameter            | Description   |
|----------------------|---|
| Boot Configuration   |   |
| Setup Prompt Timeout | Number of seconds to wait for setup activation key. 65535 (0xFFFF) means indefinite waiting.<br>Press the numeric keys to input the desired values. |
| Bootup NumLock State | Enable/Disable the Bootup NumLock function.<br>Options available: On/Off. Default setting is <b>On</b> .  |
| Quiet Boot           | Enable/Disable showing the logo during POST.<br>Options available: Enabled/Disabled. Default setting is <b>Enabled</b> .                            |
| Boot mode select     | Selects the boot mode.<br>Options available: LEGACY/UEFI. Default setting is <b>UEFI</b> .  |

| Parameter                          | Description   |
|------------------------------------|---|
| FIXED BOOT ORDER Priorities        |   |
| Boot Option #1 / #2 / #3 / #4 / #5 | <p>Press [Enter] to configure the boot priority.</p> <p>By default, the server searches for boot devices in the following sequence:</p> <ol style="list-style-type: none"> <li>1. Hard drive.</li> <li>2. CD-COM/DVD drive.</li> <li>3. USB device.</li> <li>4. Network.</li> <li>5. UEFI.</li> </ol> |
| UEFI Network Drive BBS Priorities  | Press [Enter] to configure the boot priority.   |
| UEFI Application Boot Priorities   | Press [Enter] to configure the boot priority.   |

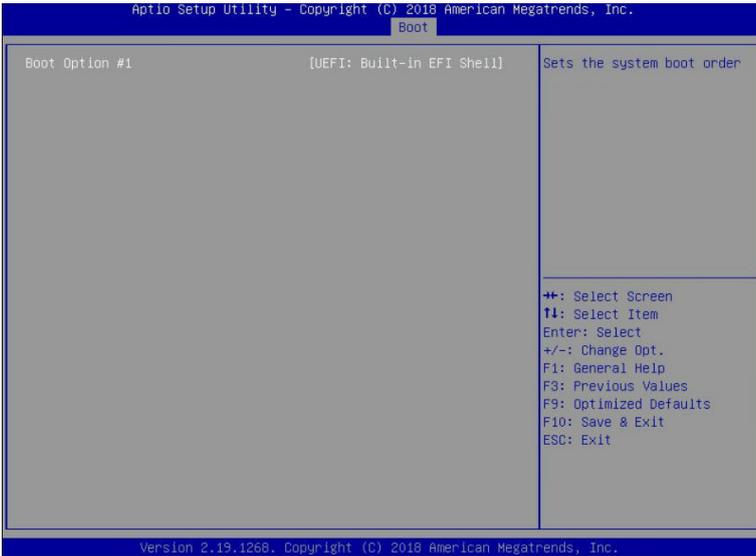

## 5-6-1 UEFI NETWORK Drive BBS Priorities

The UEFI network drive BBS priorities submenu allows you to specify the boot device priority from the available UEFI network drives during system boot-up. BIOS setup will display an error message if the legacy drive(s) specified is not bootable.

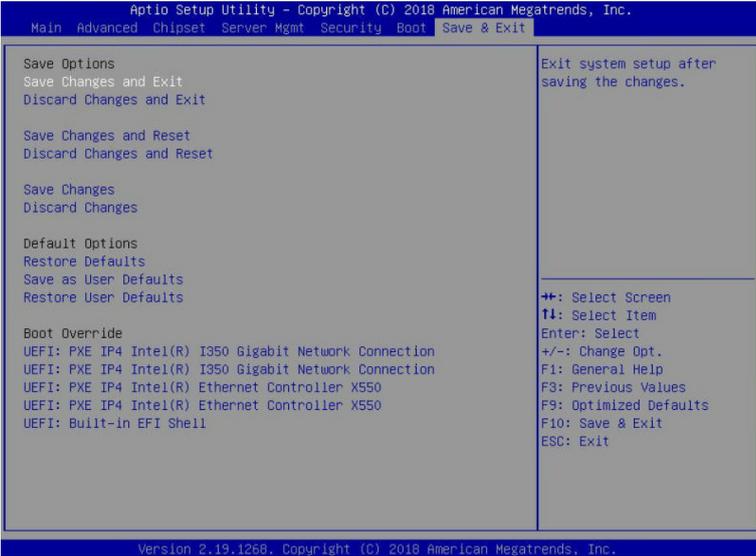

## 5-6-2 UEFI Application Boot Priorities

The UEFI application boot priorities submenu allows you to specify the boot device priority from the available UEFI applications during system boot-up. BIOS setup will display an error message if the legacy drive(s) specified is not bootable.

## 5-7 Save & Exit Menu

The Save & Exit menu displays the various options to quit from the BIOS setup. Highlight any of the exit options then press <Enter>.

| Parameter                 | Description  |
|---------------------------|--|
| Save Options              |  |
| Save Changes and Exit     | Saves changes made and closes the BIOS setup.<br>Options available: Yes/No.      |
| Discard Changes and Exit  | Discards changes made and exits the BIOS setup.<br>Options available: Yes/No.    |
| Save Changes and Reset    | Restarts the system after saving the changes made.<br>Options available: Yes/No. |
| Discard Changes and Reset | Restarts the system without saving any changes.<br>Options available: Yes/No.    |
| Save Changes              | Saves changes made in the BIOS setup.<br>Options available: Yes/No.              |
| Discard Changes           | Discards changes made and closes the BIOS setup.<br>Options available: Yes/No.   |

| Parameter             | Description   |
|-----------------------|---|
| Default Options       |   |
| Restore Defaults      | Loads the default settings for all BIOS setup parameters. Setup Defaults are quite demanding in terms of resources consumption. If you are using low-speed memory chips or other kinds of low-performance components and you choose to load these settings, the system might not function properly.<br>Options available: Yes/No. |
| Save as User Defaults | Saves the changes made as the user default settings.<br>Options available: Yes/No.  |
| Restore User Defaults | Loads the user default settings for all BIOS setup parameters.<br>Options available: Yes/No.  |
| Boot Override         | Press [Enter] to configure the device as the boot-up drive.   |

## 5-9 BIOS POST Beep code (AMI standard)

### 5-9-1 PEI Beep Codes

| # of Beeps | Description  |
|------------|--|
| 1          | Memory not Installed.  |
| 1          | Memory was installed twice (InstallPeiMemory routine in PEI Core called twice) |
| 2          | Recovery started   |
| 3          | DXE IPL was not found  |
| 3          | DXE Core Firmware Volume was not found   |
| 4          | Recovery failed  |
| 4          | S3 Resume failed   |
| 7          | Reset PPI is not available   |

### 5-9-2 DXE Beep Codes

| # of Beeps | Description   |
|------------|---|
| 1          | Invalid password                                      |
| 4          | Some of the Architectural Protocols are not available |
| 5          | No Console Output Devices are found                   |
| 5          | No Console Input Devices are found                    |
| 6          | Flash update is failed                                |
| 7          | Reset protocol is not available                       |
| 8          | Platform PCI resource requirements cannot be met      |

## 5-10 BIOS Recovery Instruction

The system has an embedded recovery technique. In the event that the BIOS becomes corrupt the boot block can be used to restore the BIOS to a working state. To restore your BIOS, please follow the instructions listed below:

### Recovery Instruction:

1. Change xxx.ROM to amiboot.rom.
2. Copy amiboot.rom and AFUDOS.exe to USB diskette.
3. Setting BIOS Recovery jump to enabled status.
4. Boot into BIOS recovery.
5. Run Proceed with flash update.
6. BIOS update.
