Disclaimer

Information in this manual is protected by copyright laws and is the property of GIGABYTE. Changes to the specifications and features in this manual may be made by GIGABYTE without prior notice. No part of this manual may be reproduced, copied, translated, transmitted, or published in any form or by any means without GIGABYTE's prior written permission.

Documentation Classifications

In order to assist in the use of this product, GIGABYTE provides the following types of documentation:

- User Manual: detailed information & steps about the installation, configuration and use of this product (e.g. motherboard, server barebones), covering hardware and BIOS.
- User Guide: detailed information about the installation & use of an add-on hardware or software component (e.g. BMC firmware, rail-kit) compatible with this product.
- Quick Installation Guide: a short guide with visual diagrams that you can reference easily for installation purposes of this product (e.g. motherboard, server barebones).

Please see the support section of the online product page to check the current availability of these documents.

For More Information

For related product specifications, the latest firmware and software, and other information please visit our website at <http://www.gigabyte.com>

For GIGABYTE distributors and resellers, additional sales & marketing materials are available from our reseller portal: <http://reseller.b2b.gigabyte.com>

For further technical assistance, please contact your GIGABYTE representative or visit <https://esupport.gigabyte.com/> to create a new support ticket

For any general sales or marketing enquiries, you may also message GIGABYTE server directly by email: server.grp@gigabyte.com

Conventions

The following conventions are used in this user's guide:

	NOTE! Pieces of additional information related to the current topic.
	CAUTION! Precautionary measures to avoid possible hardware or software problems.
	WARNING! Alerts to any damage that might result from doing or not doing specific actions.

Server Warnings and Cautions

Before installing a server, be sure that you understand the following warnings and cautions.

WARNING!

To reduce the risk of electric shock or damage to the equipment:

- Do not disable the power cord grounding plug. The grounding plug is an important safety feature.
- Plug the power cord into a grounded (earthed) electrical outlet that is easily accessible at all times.
- Unplug the power cord from the power supply to disconnect power to the equipment.
- Do not route the power cord where it can be walked on or pinched by items placed against it. Pay particular attention to the plug, electrical outlet, and the point where the cord extends from the server.

WARNING!

To reduce the risk of personal injury from hot surfaces, allow the drives and the internal system components to cool before touching them.

WARNING!

This server is equipped with high speed fans. Keep away from hazardous moving fan blades during servicing.

CAUTION!

- Do not operate the server for long periods with the access panel open or removed. Operating the server in this manner results in improper airflow and improper cooling that can lead to thermal damage.
- Danger of explosion if battery is incorrectly replaced.
- Replace battery with the same or equivalent type recommended by the manufacturer.
- Dispose of used batteries according to the manufacturer's instructions.

CAUTION!

Risk of explosion if battery is replaced incorrectly or with an incorrect type. Replace the battery only with the same or equivalent type recommended by the manufacturer. Dispose of used batteries according to the manufacturer's instructions.

Electrostatic Discharge (ESD)

CAUTION!

ESD CAN DAMAGE DRIVES, BOARDS, AND OTHER PARTS. WE RECOMMEND THAT YOU PERFORM ALL PROCEDURES AT AN ESD WORKSTATION. IF ONE IS NOT AVAILABLE, PROVIDE SOME ESD PROTECTION BY WEARING AN ANTI-STATIC WRIST STRAP ATTACHED TO CHASSIS GROUND -- ANY UNPAINTED METAL SURFACE -- ON YOUR SERVER WHEN HANDLING PARTS.

Always handle boards carefully, they can be extremely sensitive to ESD. Hold boards only by their edges without touching any components or connectors. After removing a board from its protective ESD bag or from the system, place the board component side up on a grounded, static free surface. Use a conductive foam pad if available but not the ESD bag. Do not slide the board over any surface.

System power on/off: To service components within the server, please ensure the power has been disconnected.

e.g. Remove the node from the server chassis (to disconnect power) or disconnect the power from the server chassis.

Make sure the system is removed from the rack before opening the chassis, adding, or removing any non hot-plug components.

Hazardous conditions, devices and cables: Hazardous electrical conditions may be present on power, telephone, and communication cables. Turn off the system chassis and disconnect the cables attached to the system before servicing the chassis. Otherwise, personal injury or equipment damage can result.

Electrostatic discharge (ESD) and ESD protection: ESD can damage drives, boards, and other parts. We recommend that you perform all procedures in this chapter only at an ESD workstation. If one is not available, provide some ESD protection by wearing an antistatic wrist strap attached to chassis ground (any unpainted metal surface on the server) when handling parts.

ESD and handling boards: Always handle boards carefully. They can be extremely sensitive to electrostatic discharge (ESD). Hold boards only by their edges. After removing a board from its protective wrapper or from the system, place the board component side up on a grounded, static free surface. Use a conductive foam pad if available but not the board wrapper. Do not slide board over any surface.

Installing or removing jumpers: A jumper is a small plastic encased conductor that slips over two jumper pins. Some jumpers have a small tab on top that can be gripped with fin-gertips or with a pair of fine needle nosed pliers. If the jumpers do not have such a tab, take care when using needle nosed pliers to remove or install a jumper; grip the narrow sides of the jumper with the pliers, never the wide sides. Gripping the wide sides can damage the contacts inside the jumper, causing intermittent problems with the function controlled by that jumper. Take care to grip with, but not squeeze, the pliers or other tool used to remove a jumper, or the pins on the board may bend or break.

Chapter 1 Hardware Installation

1-1 Installation Precautions

The motherboard/system contain numerous delicate electronic circuits and components which can become damaged as a result of electrostatic discharge (ESD). Prior to installation, carefully read the service guide and follow these procedures:

- Prior to installation, do not remove or break motherboard S/N (Serial Number) sticker or warranty sticker provided by your dealer. These stickers are required for warranty validation.
- Always remove the AC power by unplugging the power cord from the power outlet before installing or removing the motherboard or other hardware components.
- When connecting hardware components to the internal connectors on the motherboard, make sure they are connected tightly and securely.
- When handling the motherboard, avoid touching any metal leads or connectors.
- It is best to wear an electrostatic discharge (ESD) wrist strap when handling electronic components such as a motherboard, CPU or memory. If you do not have an ESD wrist strap, keep your hands dry and first touch a metal object to eliminate static electricity.
- Prior to installing the motherboard, please have it on top of an antistatic pad or within an electrostatic shielding container.
- Before unplugging the power supply cable from the motherboard, make sure the power supply has been turned off.
- Before turning on the power, make sure the power supply voltage has been set according to the local voltage standard.
- Before using the product, please verify that all cables and power connectors of your hardware components are connected.
- To prevent damage to the motherboard, do not allow screws to come in contact with the motherboard circuit or its components.
- Make sure there are no leftover screws or metal components placed on the motherboard or within the computer casing.
- Do not place the computer system on an uneven surface.
- Do not place the computer system in a high-temperature environment.
- Turning on the computer power during the installation process can lead to damage to system components as well as physical harm to the user.
- If you are uncertain about any installation steps or have a problem related to the use of the product, please consult a certified computer technician.

1-2 Product Specifications

 Dimensions	<ul style="list-style-type: none"> ◆ 5U ◆ 447mm (W) x 219.6mm (H) x 900mm (D)
 CPU	<ul style="list-style-type: none"> ◆ 2nd Generation Intel® Xeon® Scalable and Intel® Xeon® Scalable Processors ◆ Intel® Xeon® Platinum Processor, Intel® Xeon® Gold Processor, Intel® Xeon® Silver Processor and Intel® Xeon® Bronze Processor <p>NOTE! If only 1 CPU is installed, some PCIe and memory functions might be unavailable.</p>
 Socket	<ul style="list-style-type: none"> ◆ 2 x LGA 3647 ◆ Socket P ◆ System TDP up to 205W
 Chipset	<ul style="list-style-type: none"> ◆ Intel® C621 Express Chipset
 Memory	<ul style="list-style-type: none"> ◆ 24 x DIMM slots ◆ DDR4 memory supported only ◆ 6-channel memory architecture ◆ RDIMM modules up to 64GB supported ◆ LRDIMM modules up to 128GB supported ◆ 1.2V modules: 2933(1DPC)/2666/2400 MHz
 LAN	<ul style="list-style-type: none"> ◆ 2 x 1Gb/s BASE-T LAN ports (Intel® I350-AM2) ◆ 1 x 10/100/1000 management LAN
 Expansion Slot	<ul style="list-style-type: none"> ◆ 32 x PCIe x16 low profile half-length slots (Gen3 x16 bus) for GPUs ◆ 8 x PCIe x16 low profile half-length slots (Gen3 x16 bus) for LAN connectivity <p>1 x PCIe low profile half-length slots (Gen3 x8 bus) for add-on cards (Front side)</p> <p>1 x OCP 2.0 mezzanine slot (Rear side)</p> <p>- PCIe Gen3 x8</p> <p>- Type1, P1, P2, P3, P4, K2, K3</p>
 Video	<ul style="list-style-type: none"> ◆ Integrated in Aspeed® AST2500 ◆ 2D Video Graphic Adapter with PCIe bus interface ◆ 1920x1200@60Hz 32bpp, DDR4 SDRAM
 Storage	<ul style="list-style-type: none"> ◆ 4 x 2.5" NVMe, 6 x 2.5" SATA/SAS hot-swappable HDD/SSD bays <p>SAS card is required to enable SAS devices support</p>
 Internal I/O	<ul style="list-style-type: none"> ◆ 1 x TPM header ◆ 1 x VROC connector ◆ 1 x Front VGA header ◆ 1 x Serial header

	Front I/O	<ul style="list-style-type: none"> ◆ 2 x USB 3.0 ◆ 1 x VGA ◆ 3 x RJ45 ◆ 1 x Power button with LED ◆ 1 x ID button with LED ◆ 1 x Reset button ◆ 1 x System status LED ◆ 1 x HDD access LED ◆ 2 x LAN activity LEDs
	Backplane I/O	<ul style="list-style-type: none"> ◆ Speed and bandwidth: SATA 6Gb/s, SAS 12Gb/s per port
	TPM	<ul style="list-style-type: none"> ◆ 1 x TPM header with SPI interface ◆ Optional TPM2.0 kit: CTM010
	System Fan	<ul style="list-style-type: none"> ◆ 10 x 60x60x76mm (21,700rpm)
	System Management	<ul style="list-style-type: none"> ◆ Aspeed® AST2500 management controller ◆ AMI MegaRAC SP-X Solution web interface ◆ Dashboard ◆ JAVA Based Serial Over LAN ◆ HTML5 KVM ◆ Sensor Monitor (Voltage, RPM, Temperature, CPU Status ...etc.) ◆ Sensor Reading History Data ◆ FRU Information ◆ SEL Log in Linear Storage / Circular Storage Policy ◆ Hardware Inventory ◆ Fan Profile ◆ System Firewall ◆ Power Consumption ◆ Power Control ◆ LDAP / AD / RADIUS Support ◆ Backup & Restore Configuration ◆ Remote BIOS/BMC/CPLD Update ◆ Event Log Filter ◆ User Management ◆ Media Redirection Settings ◆ PAM Order Settings ◆ SSL Settings ◆ SMTP Settings

Power Supply

- ◆ 4 x 2200W redundant PSUs
- ◆ 80 PLUS Platinum
- ◆ AC Input:
 - ◆ - 100-127V~/ 14A, 47-63Hz
 - ◆ - 200-240V~/ 12.6A, 47-63Hz
- ◆ DC output:
 - ◆ - Max 1200W/ 100-127V~
 - ◆ +12.12V/ 95.6A
 - ◆ +12Vsb/ 3.5A
 - ◆ - Max 2200W/ 200-240V
 - ◆ +12.12V/ 178.1A
 - ◆ +12Vsb/ 3.5A

NOTE:

- ◆ The system power supply requires C19 type power cord

Environment

Ambient

Temperature

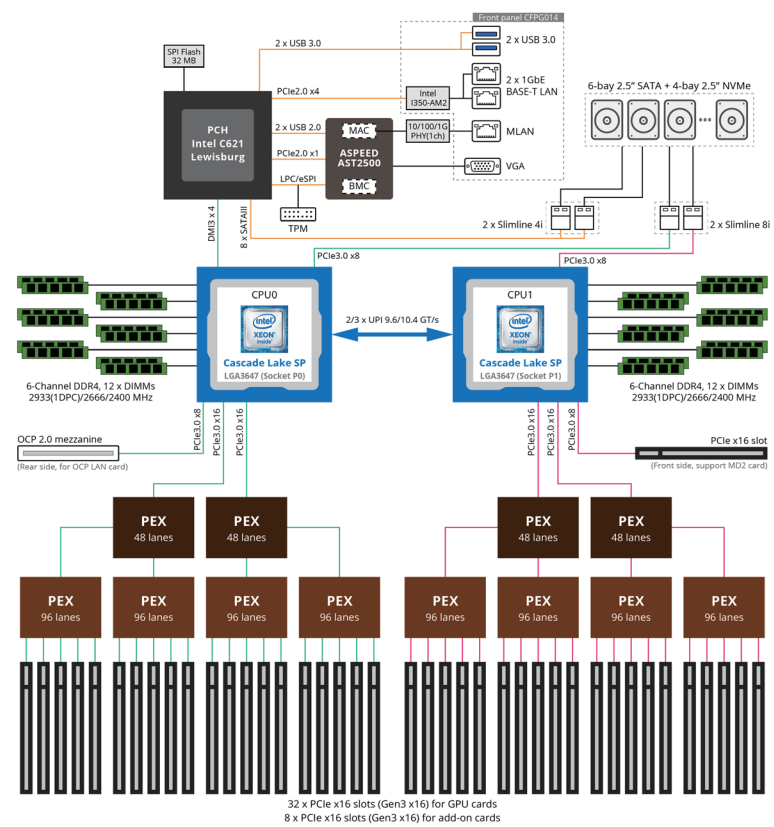

Relative

Humidity

- ◆ Operating temperature: 10°C to 35°C
- ◆ Operating humidity: 8-80% (non-condensing)
- ◆ Non-operating temperature: -40°C to 60°C
- ◆ Non-operating humidity: 20%-95% (non-condensing)

* We reserve the right to make any changes to the product specifications and product-related information without prior notice.

1-3 System Block Diagram

This page intentionally left blank

Chapter 2 System Appearance

2-1 Front View

No.	Decription
1.	PCIe Card Slot
2.	Front Panel LEDs and Buttons
3.	GbE LAN Port x 2
4.	Server Management LAN Port
5.	USB 3.0 Port x 2
6.	VGA Port
Orange HDD Latches Support NVMe	

- Please Go to Chapter 2-3 Front Panel LED and Buttons for detail description of function LEDs.

2-2 Rear View

No.	Decription
1.	PCIe Card Slot #20
2.	Mezzanine Card Slot
3.	10/100/1000 Server management LAN port
4.	LAN Module (Option)

2-3 Front Panel LED and Buttons

No.	Name	Color	Status	Description
1.	Reset Button	--	--	Press this button to reset the system.
2.	HDD Status LED	Green	On	Indicates locating the HDD.
			Blink	Indicates accessing the HDD.
		Amber	On	Indicates HDD error.
		Green / Amber	Blink	Indicates HDD rebuilding.
		N/A	Off	Indicates no HDD access or no HDD error.
3.	System Status LED	Green	Solid On	Indicates system is operating normally.
			Solid On	Indicates a critical condition, may include: - System fan failure - System temperature
		Amber	Blink	Indicates non-critical condition, may include: - Redundant power module failure - Temperature and voltage issue - Chassis intrusion
			Off	Indicates system is not ready, may include: - POST error - NMI error - Processor or terminator is missing
		N/A	Off	
4.	NMI Button	--	--	Press this button for the server to generate a NMI to the processor. If multiple-bit ECC errors occur, the server will effectively be handled.
5.	ID Button with LED	--	--	Press this button to activate system identification.
6.	Power Button with LED	Green	On	Indicates the system is powered on.
		Green	Blink	System is in ACPI S1 slate (sleep mode).
		N/A	Off	Indicates system is not powered on or in ACPI S5 slate (power off) or system is in ACPI S4 slate (hibernation mode).

2-4 Front System LAN LEDs

No.	Name	Color	Status	Description
1.	GbE Speed LED	Yellow	On	1 Gbps data rate
		Green	On	100 Mbps data rate
		N/A	Off	10 Mbps data rate
2.	GbE Link / Activity LED	Green	On	Link between system and network or no access
			Blink	Data transmission or reception is occurring.
		N/A	Off	No data transmission or reception is occurring.

2-5 Rear System LAN LEDs (Optional)

No.	Name	Color	Status	Description
1.	GbE Speed LED	Yellow	On	1 Gbps data rate
		Green	On	100 Mbps data rate
		N/A	Off	10 Mbps data rate
2.	GbE Link / Activity LED	Green	On	Link between system and network or no access
			Blink	Data transmission or reception is occurring.
		N/A	Off	No data transmission or reception is occurring.

2-6 Hard Disk Drive LEDs

RAID SKU		LED1	Locate	HDD Fault	Rebuilding	HDD Access	HDD Present (No Access)
No RAID configuration (via HBA)	Disk LED (LED on Back Panel)	Green	ON(*1)	OFF		BLINK (*2)	OFF
		Amber	OFF	OFF		OFF	OFF
	Removed HDD Slot (LED on Back Panel)	Green	ON(*1)	OFF		--	--
		Amber	OFF	OFF		--	--
RAID configuration (via HW RAID Card or SW RAID Card)	Disk LED	Green	ON	OFF		BLINK (*2)	OFF
		Amber	OFF	ON	(Low Speed: 2 Hz)	OFF	OFF
	Removed HDD Slot	Green	ON(*1)	OFF	(*3)	--	--
		Amber	OFF	ON	(*3)	--	--

LED 2	HDD Present	No HDD
Green	ON	OFF

NOTE:

*1: Depends on HBA/Utility Spec.

*2: Blink cycle depends on HDD's activity signal.

*3: If HDD is pulled out during rebuilding, the disk status of this HDD is regarded as faulty.

This page intentionally left blank

Chapter 3 System Hardware Installation

Pre-installation Instructions

System components and electronic circuit boards can be damaged by discharges of static electricity. Working on systems that are still connected to a power supply can be extremely dangerous. Follow the simple guidelines below to avoid damage to your system or injury to yourself.

- Always disconnect the system from the power outlet whenever you are working inside the system case.
- If possible, wear a grounded wrist strap when you are working inside the system case. Alternatively, discharge any static electricity by touching the bare metal system of the system case, or the bare metal body of any other grounded appliance.
- Hold electronic circuit boards by the edges only. Do not touch the components on the board unless it is necessary to do so. Do not flex or stress the circuit board.
- Leave all components inside the static-proof packaging until you are ready to use the component for the installation.

3-1 Removing the Top Rear Cover

Before you remove the top rear cover:

- Make sure the system is not turned on or connected to AC power.

Follow these instructions to remove the top rear cover:

1. Unlock the plastic handle and pull the grip handle to open the panel cover.
2. Slide the cover cover to the rear of the system and then remove the cover in the direction indicated by the arrow.
3. To reinstall the chassis cover reverse steps 1-2.

3-2 Installing the Hard Disk Drive

Read the following guidelines before you begin to install the hard disk drive:

- Take note of the drive tray orientation before sliding it out.
- The tray will not fit back into the bay if inserted incorrectly.
- Make sure that the HDD is connected to the HDD connector on the frontplane.

Follow these instructions to install a 2.5" hard disk drive:

1. Press the release button.
2. Extend the locking lever.
3. Pull the locking lever in the direction indicated to remove the HDD tray.
4. Align the hard disk drive with the positioning stud on the HDD tray.
5. Slide the hard disk drive into the HDD tray.
6. Reinsert the HDD tray into the slot and close the locking lever.

CAUTION!

We strongly recommend using enterprise level hard disk drives in the Gigabyte server system. For more information of recommended HDDs, please visit the Gigabyte website:

<https://www.gigabyte.com> and search for the specific product QVL from **Support & Downloads**.

3-3 Removing the GPU Tray

- Do not use the tray handles when moving chassis.

Follow these instructions to remove the GPU tray

1. Rotate the locking latch.
2. Press the release retaining clips of the tray along the direction of the arrow,
3. Pulling out the tray by using its handle.

Follow these instructions to install the GPU tray

1. Press the release retaining clips of the tray along the direction of the arrow,
2. Push the tray into the system.

3-4 Installing the GPU Card (Optional)

Before you install the GPU card:

- Voltages can be present within the server whenever an AC power source is connected. This voltage is present even when the main power switch is in the off position. Ensure that the system is powered down and all power sources have been disconnected from the server prior to installing a GPU card. Make sure the system is not turned on or connected to AC power.
- Failure to observe these warnings could result in personal injury or damage to the equipment.

Follow these instructions to install the GPU card:

1. Pull out the GPU tray.
2. Remove the two screws securing the GPU card slot covers and remove the GPU slot covers.
3. Insert the GPU card into the selected slot. Make sure the GPU card is properly seated.
4. Install the two screws to secure the GPU card in place.
5. Install the three screws to secure the GPU card bracket in place.

3-5 Replacing the PCIe RAID Card (Optional)

Follow these instructions to replace the PCIe RAID card:

1. Disconnect any cables that connect to the PCIe RAID card.
2. Loosen the thumbnail screw securing the PCIe RAID card lock in place.
3. Extend the PCIe RAID card lock.
4. Gently pull the PCIe RAID card in the direction indicated to disconnect the PCIe RAID.
5. Reverse the previous steps to install the replacement PCIe RAID card.

3-6 Installing the CPU and Heat Sink

Read the following guidelines before you begin to install the CPU:

- Make sure that the motherboard supports the CPU.
- Always turn off the system and unplug the power cord from the power outlet before installing the CPU to prevent hardware damage.
- Unplug all cables from the power outlets.
- Disconnect all telecommunication cables from their ports.
- Place the system unit on a flat and stable surface.
- Open the system according to the instructions.

WARNING!

Failure to properly turn off the server before you start installing components may cause serious damage. Do not attempt the procedures described in the following sections unless you are a qualified service technician.

Follow these instructions to install the CPU:

1. Align the processor to the carrier so that the gold triangle on the processor aligns with the triangle on the carrier, and then install the processor into the carrier.

NOTE: Apply thermal compound evenly on the top of the CPU.

2. Carefully flip the heatsink over. Align the carrier assembly so that the triangle on the carrier aligns with the triangle on the heatsink, and then install the carrier assembly onto the bottom of the heatsink.
3. Remove the CPU socket cover.

NOTE: Save and replace the CPU socket cover if the processor is removed from its socket.

4. Align the heatsink to the CPU socket using the guide pins and make sure the gold triangle is in the correct orientation. Then place the heatsink onto the top of the CPU socket.
5. Secure the heatsink by tightening the screws in sequential order (1→2→3→4).

NOTE: When removing the heatsink, loosen the screws in reverse order (4→3→2→1).

3-7 Installing the Memory

Read the following guidelines before you begin to install the memory:

- Make sure that the motherboard supports the memory. It is recommended that memory of the same capacity, brand, speed, and chips be used.
- Always turn off the system and unplug the power cord from the power outlet before installing the memory to prevent hardware damage.
- Memory modules have a foolproof design. A memory module can be installed in only one direction. If you are unable to insert the memory, switch the direction.

3-7-1 Six Channel Memory Configuration

This motherboard provides 24 DDR4 memory sockets and supports Six Channel Technology. After the memory is installed, the BIOS will automatically detect the specifications and capacity of the memory. Enabling Four Channel memory mode will be four times of the original memory bandwidth.

3-7-2 Installing a Memory

- Before installing a memory module, make sure to turn off the system and unplug the power cord from the power outlet to prevent damage to the memory module.
- Be sure to install DDR4 DIMMs on this motherboard.

Follow these instructions to install the Memory:

1. Insert the DIMM memory module vertically into the DIMM slot, and push it down.
2. Close the plastic clip at both edges of the DIMM slots to lock the DIMM module.
3. Reverse the installation steps when you want to remove the DIMM module.

3-7-3 DIMM Population Rule

Be sure to install DDR4 DIMMs on this motherboard.

- The initial DIMMs installed must be installed in the primary CPU (CPU0) memory slots first.
- When populating DIMMs into a channel, slot numbers having the suffix "0" must be populated first, then followed by slot numbers having the suffix "1".
- A combination of LRDIMMs and RDIMMs is not allowed in the same channel.
- A combination of non-3DS and 3DS LRDIMMs is not allowed in the same channel.

Type	Ranks Per DIMM and Data Width	DIMM Capacity (GB)			Speed (MT/s); Voltage (V); Slots per Channel (SPC) and DIMM per Channel (DPC)
					1 Slot Per Channel
		DRAM Density			1DPC
		4Gb*	8Gb	16Gb	1.2V
RDIMM	SRx8	4GB	8GB	16GB	2933
RDIMM	SRx4	8GB	16GB	32GB	
RDIMM	DRx8	8GB	16GB	32GB	
RDIMM	DRx4	16GB	32GB	64GB	
RDIMM 3DS	QRx4	N/A	2H-64GB	2H-128GB	
	8Rx4	N/A	4H-128GB	4H-256GB	
LRDIMM	QRx4	32GB	64GB	128GB	
LRDIMM 3DS	QRx4	N/A	2H-64GB	2H-128GB	
	8Rx4	N/A	4H-128GB	4H-256GB	

3-7-4 Intel Optane DCPMM DIMM Population Rule

Thermal conditions for DCPMM DIMM support:

- The ambient temperature must be at or below 35°C
- The Cascade Lake CPU used must have a maximum TDP of 205W
- A maximum of 12 pcs 256G DCPMM may be installed

- RDIMM / DCPMM must be installed into CPU0 memory first
- You must install one RDIMM into any slot #0 of CPU0 before installing the DCPMM.
(e.g. A0/B0/C0/D0/E0/F0)
- The DCPMM must be installed into the DIMM slot #1 next to the corresponding RDIMM in slot #0 (e.g. if RDIMM is installed into DIMM slot A0, the DCPMM must be installed into DIMM slot A1)

3-8 Replacing the System FAN Module

CAUTION!

Before you remove or install the system fans follow these steps:

- Make sure the system is not turned on or connected to the AC power.
- Disconnect all necessary cable connections. Failure to observe these warnings could result in personal injury or damage to the equipment.

Follow these instructions to replace the system fan module:

[For all system fan modules]

1. Grasp the finger slots of the fan module and pull up to remove the fan module.
2. Reverse the previous steps to install the replacement fan module.

3-9 Removing the Top Front Cover

Skip this section if you are not going to replace the PCIe RAID card.

Follow these instructions to remove the top front cover:

1. Remove the three screws securing the cover.
2. Slide the cover towards the rear and remove the cover in the direction indicated.

3-10 Replacing the Power Supply

CAUTION!

- In order to reduce the risk of injury from electric shock, disconnect AC power from the power supply before removing the power supply from the system.
- Please see Section 2-2 "Rear View" for installation sequence.

Follow these instructions to replace the power supply:

1. Flip up and then grasp the power supply handle.
2. Press the retaining clip on the right side of the power supply in the direction indicated.
3. Pull out the power supply using the handle.
4. Insert the replacement power supply firmly into the chassis. Connect the AC power cord to the replacement power supply.

3-11 Replacing the LAN Module

Follow these instructions to replace the LAN module:

1. Press the retaining clip on the right side of the LAN module in the direction indicated.
2. Pull out the LAN module using the handle.
3. Insert the replacement LAN module firmly into the chassis.

3-12 Cable Connections

3-12-1 Middle Board to Extension Board and Motherboard

Chapter 4 Motherboard Components

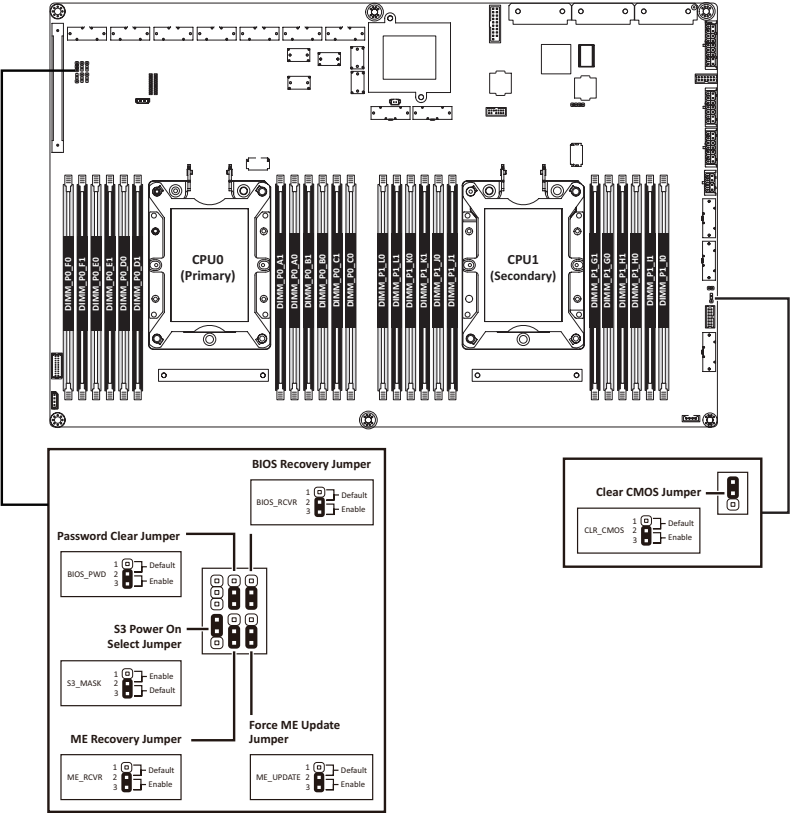

4-1 Motherboard Components

Item	Description
1	SlimLine Connector (PCIe Signal)
2	USB 3.0 header
3	CPU0 Power Connector
4	CPU1 Power Connector
5	System Power Connector
6	2 x 9 Pin System FAN Power Connector
7	System FAN Control Signal Connector
8	2 x 7 Pin HDD Back Plane Board Power Connector
9	2 x 4 Pin Front Panel Power Connector
10	SlimLine Connector (PCIe Signal/Defined by SKUs)
11	Case Open Intrusion Header
12	Front Panel VGA Connector
13	SlimLine Connector (Front Panel Signal)
14	VROC Module Connector
15	IPMB Connector
16	2 x 15 Pin HDD Back Plane Board Connector
17	Memory Status LED
18	PCIe x 8 Slot (Gen3)
19	SlimLine Connector (MLAN/NCSI Signal)

20	SlimLine Connector (Miscellaneous)
21	SlimLine Connector (SATA3/#0-3)
22	SlimLine Connector (SATA3/#4-7)
23	SlimLine Connector (sSATA3/#8-11)
24	Battery Cable Connector
25	Omni-Path Connector (for CPU0)
26	SlimLine Connector (PCIe Signal)
27	TPM Module Connector
26	Omni-Path Connector (for CPU1)

4-2 Jumper Settings

This page intentionally left blank

Chapter 5 BIOS Setup

BIOS (Basic Input and Output System) records hardware parameters of the system in the EFI on the motherboard. Its major functions include conducting the Power-On Self-Test (POST) during system startup, saving system parameters, loading the operating system etc. The BIOS includes a BIOS Setup program that allows the user to modify basic system configuration settings or to activate certain system features. When the power is turned off, the battery on the motherboard supplies the necessary power to the CMOS to keep the configuration values in the CMOS.

To access the BIOS Setup program, press the key during the POST when the power is turned on.

- BIOS flashing is potentially risky, if you do not encounter any problems when using the current BIOS version, it is recommended that you don't flash the BIOS. To flash the BIOS, do it with caution. Inadequate BIOS flashing may result in system malfunction.
- It is recommended that you not alter the default settings (unless you need to) to prevent system instability or other unexpected results. Inadequately altering the settings may result in system's failure to boot. If this occurs, try to clear the CMOS values and reset the board to default values. (Refer to the **Exit** section in this chapter or introductions of the battery/clearing CMOS jumper in Chapter 4 for how to clear the CMOS values.)

BIOS Setup Program Function Keys

<<>><>>	Move the selection bar to select the screen
<↑><↓>	Move the selection bar to select an item
<+>	Increase the numeric value or make changes
<->	Decrease the numeric value or make changes
<Enter>	Execute command or enter the submenu
<Esc>	Main Menu: Exit the BIOS Setup program Submenus: Exit current submenu
<F1>	Show descriptions of general help
<F3>	Restore the previous BIOS settings for the current submenus
<F9>	Load the Optimized BIOS default settings for the current submenus
<F10>	Save all the changes and exit the BIOS Setup program

■ **Main**

This setup page includes all the items of the standard compatible BIOS.

■ **Advanced**

This setup page includes all the items of AMI BIOS special enhanced features.

(ex: Auto detect fan and temperature status, automatically configure hard disk parameters.)

■ **Chipset**

This setup page includes all the submenu options for configuring the functions of the Platform Controller Hub.

■ **Server Management**

Server additional features enabled/disabled setup menus.

■ **Security**

Change, set, or disable supervisor and user password. Configuration supervisor password allows you to restrict access to the system and BIOS Setup.

A supervisor password allows you to make changes in BIOS Setup.

A user password only allows you to view the BIOS settings but not to make changes.

■ **Boot**

This setup page provides items for configuration of the boot sequence.

■ **Save & Exit**

Save all the changes made in the BIOS Setup program to the CMOS and exit BIOS Setup. (Pressing <F10> can also carry out this task.)

Abandon all changes and the previous settings remain in effect. Pressing <Y> to the confirmation message will exit BIOS Setup. (Pressing <Esc> can also carry out this task.)

5-1 The Main Menu

Once you enter the BIOS Setup program, the Main Menu (as shown below) appears on the screen. Use arrow keys to move among the items and press <Enter> to accept or enter other sub-menu.

Main Menu Help

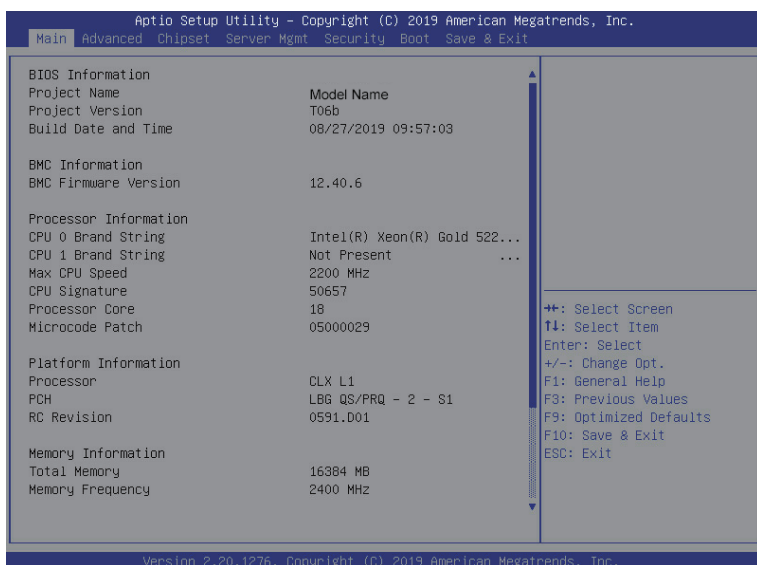

The on-screen description of a highlighted setup option is displayed on the bottom line of the Main Menu.

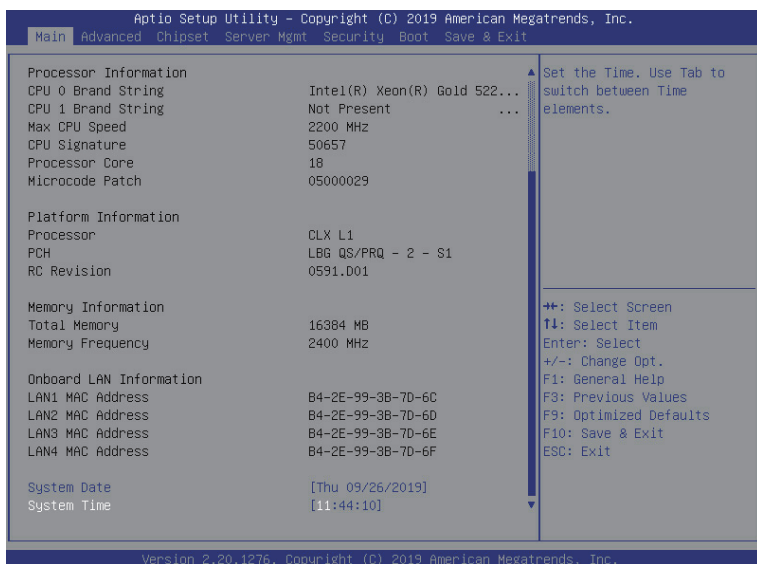

Submenu Help

While in a submenu, press <F1> to display a help screen (General Help) of function keys available for the menu. Press <Esc> to exit the help screen. Help for each item is in the Item Help block on the right side of the submenu.

- When the system is not stable as usual, select the **Restore Defaults** item to set your system to its defaults.
- The BIOS Setup menus described in this chapter are for reference only and may differ by BIOS version.

Parameter	Description
BIOS Information	
Project Name	Displays the project name information.
Project Version	Displays version number of the BIOS setup utility.
Build Date and Time	Displays the date and time when the BIOS setup utility was created.
BMC Information ^(Note1)	
BMC Firmware Version ^(Note1)	Displays BMC firmware version information.
Processor Information	
CPU0 Brand String/ CPU1 Brand String/ Max CPU Speed / CPU Signature / Processor Core / Microcode Patch	Displays the technical specifications for the installed processor(s).
Memory Information	
Total Memory ^(Note2)	Displays the total memory size of the installed memory.
Memory Frequency ^(Note2)	Displays the frequency information of the installed memory.

(Note1) Functions available on selected models.

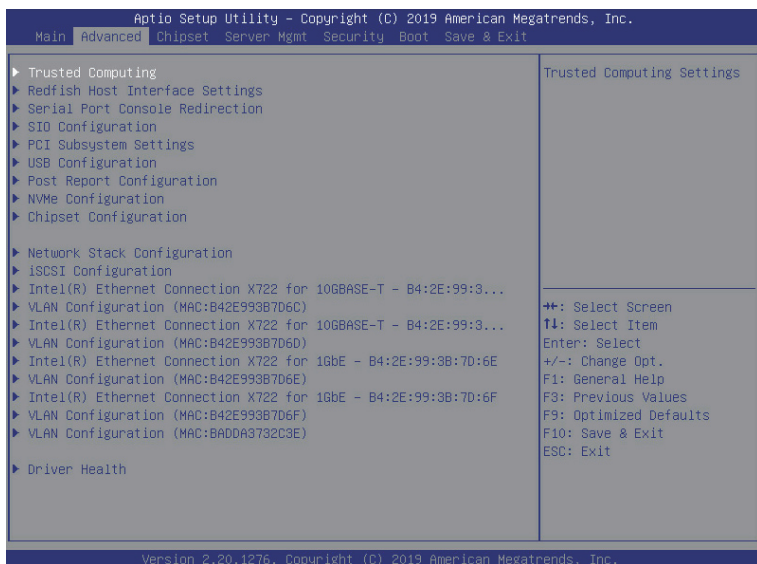

(Note2) This section will display capacity and frequency information of the memory that the customer has installed.

Parameter	Description
Onboard LAN Information	
LAN1 MAC Address ^(Note)	Displays LAN MAC address information.
LAN2 MAC Address ^(Note)	Displays LAN MAC address information.
LAN3 MAC Address ^(Note)	Displays LAN MAC address information.
LAN4 MAC Address ^(Note)	Displays LAN MAC address information.
System Date	Sets the date following the weekday-month-day-year format.
System Time	Sets the system time following the hour-minute-second format.

(Note) The number of LAN ports listed will depend on the motherboard / system model.

5-2 Advanced Menu

The Advanced Menu displays submenu options for configuring the function of various hardware components. Select a submenu item, then press <Enter> to access the related submenu screen.

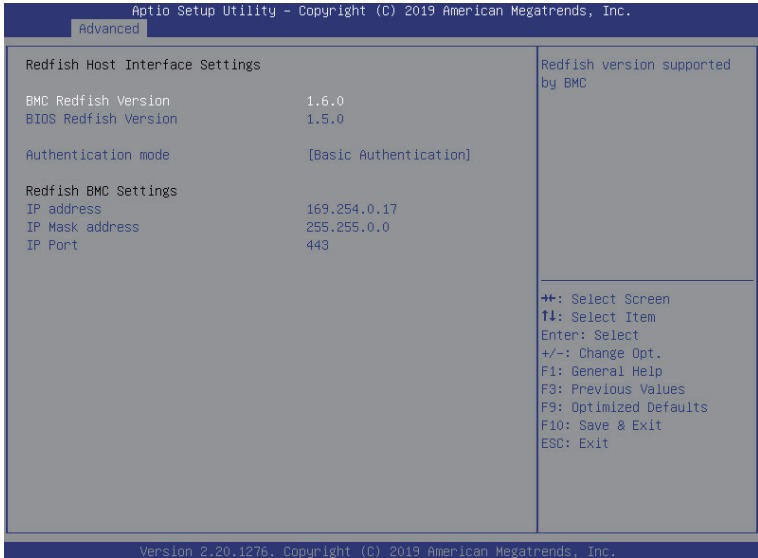

5-2-1 Trusted Computing

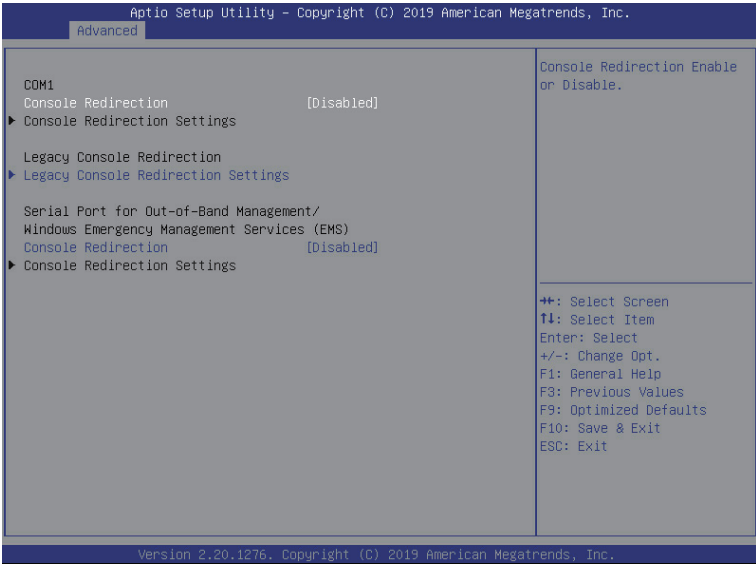

Parameter	Description
Configuration	
Security Device Support	Enable/Disable the TPM support feature. Options available: Enable/Disable. Default setting is Enable .
Current Status Information	Displays current TPM status information.

5-2-2 Redfish Host Interface Settings

Parameter	Description
Redfish Host Interface Settings	
BMC Redfish Version	Displays the Redfish version supported by BMC.
BIOS Redfish Version	Displays the Redfish version supported by BIOS.
Authenticatcion mode	Selects Authentication mode. Options available: Basic Authentication/Session Authentication. Default setting is Enable .
Redfish BMC Settings	
IP address	Enter IP address.
IP Mask address	Enter IP Mask address.
IP Port	Enter IP Port.

5-2-3 Serial Port Console Redirection

Parameter	Description
COM1 Console Redirection ^(Note)	Console redirection enables the users to manage the system from a remote location. Options available: Enabled/Disabled. Default setting is Disabled .
COM1 Console Redirection Settings	Press [Enter] to configure advanced items. Please note that this item is configurable when COM1 Console Redirection is set to Enabled. <ul style="list-style-type: none">◆ Terminal Type<ul style="list-style-type: none">– Selects a terminal type to be used for console redirection.– Options available: VT100, VT100+, ANSI, VT-UTF8. Default setting is VT100+.◆ Bits per second<ul style="list-style-type: none">– Selects the transfer rate for console redirection.– Options available: 9600, 19200, 38400, 57600, 115200. Default setting is 115200.◆ Data Bits<ul style="list-style-type: none">– Selects the number of data bits used for console redirection.– Options available: 7/8. Default setting is 8.

(Note) Advanced items prompt when this item is defined.

Parameter	Description
COM1 Console Redirection Settings (continued)	<ul style="list-style-type: none"> ◆ Parity <ul style="list-style-type: none"> – A parity bit can be sent with the data bits to detect some transmission errors. – Even: parity bit is 0 if the num of 1's in the data bits is even. – Odd: parity bit is 0 if num of 1's in the data bits is odd. – Mark: parity bit is always 1. Space: Parity bit is always 0. – Mark and Space Parity do not allow for error detection. – Options available: None, Even, Odd, Mark, Space. Default setting is None. ◆ Stop Bits <ul style="list-style-type: none"> – Stop bits indicate the end of a serial data packet. (A start bit indicates the beginning). The standard setting is 1 stop bit. Communication with slow devices may require more than 1 stop bit. – Options available: 1/2. Default setting is 1. ◆ Flow Control <ul style="list-style-type: none"> – Flow control can prevent data loss from buffer overflow. When sending data, if the receiving buffers are full, a 'stop' signal can be sent to stop the data flow. Once the buffers are empty, a 'start' signal can be sent to re-start the flow. Hardware flow control uses two wires to send start/stop signals. – Options available: None, Hardware RTS/CTS. Default setting is None. ◆ VT-UTF8 Combo Key Support <ul style="list-style-type: none"> – Enable/Disable the VT-UTF8 Combo Key Support. – Options available: Enabled/Disabled. Default setting is Enabled. ◆ Recorder Mode^(Note) <ul style="list-style-type: none"> – When this mode enabled, only texts will be send. This is to capture Terminal data. – Options available: Enabled/Disabled. Default setting is Disabled. ◆ Resolution 100x31^(Note) <ul style="list-style-type: none"> – Enable/Disable extended terminal resolution. – Options available: Enabled/Disabled. Default setting is Enabled. ◆ Putty KeyPad^(Note) <ul style="list-style-type: none"> – Selects FunctionKey and LeyPad on Putty. – Options available: VT100, LINUX, XTERMR6, SC0, ESCN, VT400. Default setting is VT100.

(Note) Advanced items prompt when this item is defined.

Parameter	Description
Legacy Console Redirection	
Legacy Console Redirection Settings	<p>Press [Enter] to configure advanced items.</p> <ul style="list-style-type: none"> ◆ Redirection COM Port <ul style="list-style-type: none"> – Selects a COM port for Legacy serial redirection. – Default setting is COM1. ◆ Resolution <ul style="list-style-type: none"> – Selects the number of rows and columns used in Console Redirection for legacy OS support. – Options available: 80x24, 80x25. Default setting is 80x24. ◆ Redirect After POST <ul style="list-style-type: none"> – When Bootloader is selected, then Legacy Console Redirection is disabled before booting to legacy OS. When Always Enable is selected, then Legacy Console Redirection is enabled for legacy OS. – Options available: Always Enable, BootLoader. Default setting is Always Enable.
Serial Port for Out-of-Band Management / Windows Emergency Management Services (EMS) Console Redirection ^(Note)	<p>EMS console redirection allows the user to configure Console Redirection Settings to support Out-of-Band Serial Port management.</p> <p>Options available: Enabled/Disabled. Default setting is Disabled.</p>
Serial Port for Out-of-Band EMS Console Redirection Settings	<p>Press [Enter] to configure advanced items.</p> <p>Please note that this item is configurable when Serial Port for Out-of-Band Management EMS Console Redirection is set to Enabled.</p> <ul style="list-style-type: none"> ◆ Out-of-Band Mgmt Port <ul style="list-style-type: none"> – Microsoft Windows Emergency Management Service (EMS) allows for remote management of a Windows Server OS through a serial port. – Default setting is COM1. ◆ Terminal Type <ul style="list-style-type: none"> – Selects a terminal type to be used for console redirection. – Options available: VT100, VT100+, ANSI, VT-UTF8. Default setting is VT100+. ◆ Bits per second <ul style="list-style-type: none"> – Selects the transfer rate for console redirection. – Options available: 9600, 19200, 38400, 57600, 115200. Default setting is 115200.

(Note) Advanced items prompt when this item is defined.

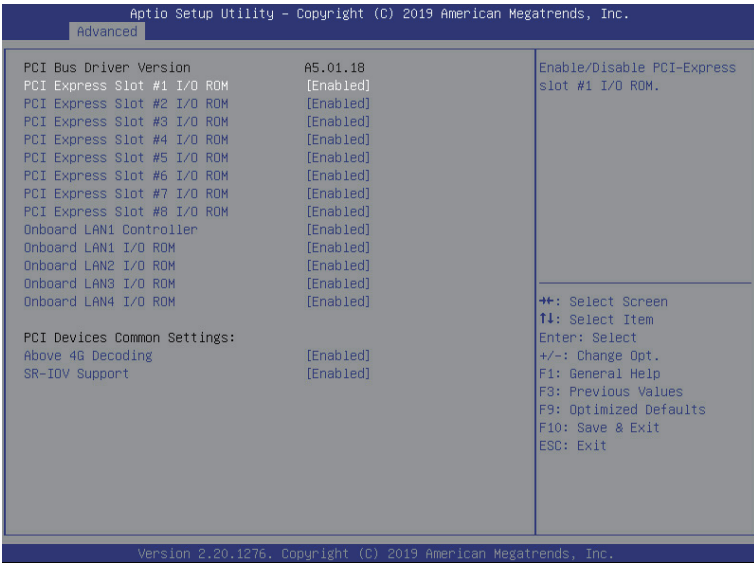

Parameter	Description
Serial Port for Out-of-Band EMS Console Redirection Settings(continued)	<ul style="list-style-type: none"> ◆ Flow Control <ul style="list-style-type: none"> – Flow control can prevent data loss from buffer overflow. When sending data, if the receiving buffers are full, a 'stop' signal can be sent to stop the data flow. Once the buffers are empty, a 'start' signal can be sent to re-start the flow. Hardware flow control uses two wires to send start/stop signals. – Options available: None, Hardware RTS/CTS, Software Xon/Xoff. Default setting is None.

5-2-4 SIO Configuration

Parameter	Description
AMI SIO Driver Version	Displays the AMI SIO driver version information.
Super IO Chip Logical Device(s) Configuration	
	Press [Enter] to configure advanced items.
	◆ Use This Device <ul style="list-style-type: none">– When set to Enabled allows you to configure the serial port settings. When set to Disabled, displays no configuration for the serial port.– Options available: Enabled/Disabled. Default setting is Enabled.
	◆ Current: <ul style="list-style-type: none">– Displays the serial port base I/O address and IRQ.
[*Active*] Serial Port	◆ Possible: <ul style="list-style-type: none">– Configures the serial port base I/O address and IRQ. Use Automatic Settings IO=3F8h; IRQ=4; DMA; IO=3F8h; IRQ=3, 4, 5, 7, 9, 10, 11, 12; DMA; IO=2F8h; IRQ=3, 4, 5, 7, 9, 10, 11, 12; DMA; IO=3E8h; IRQ=3, 4, 5, 7, 9, 10, 11, 12; DMA; IO=2E8h; IRQ=3, 4, 5, 7, 9, 10, 11, 12; DMA; Default setting is Use Automatic Settings.

5-2-5 PCI Subsystem Settings

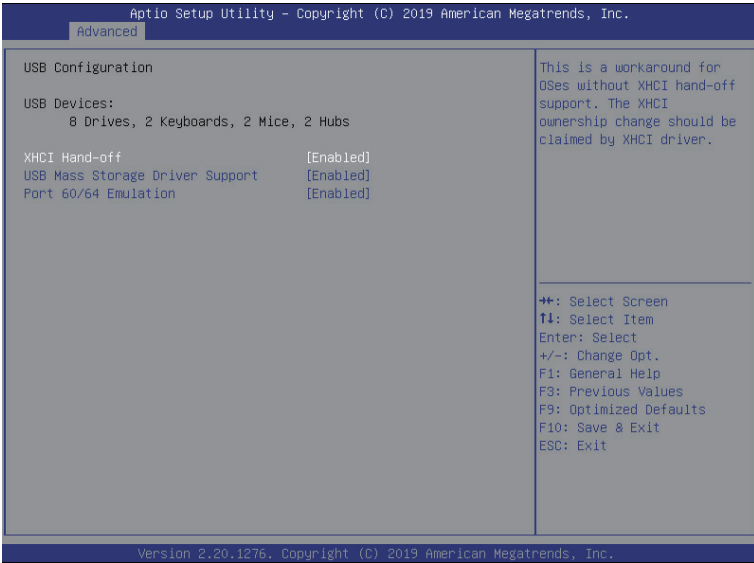

Parameter	Description
PCI Bus Driver Version	Displays the PCI Bus Driver version information.
PCI Express Slot # I/O ROM ^(Note1)	When enabled, this setting will initialize the device expansion ROM for the related PCI-E slot. Options available: Enabled/Disabled. Default setting is Enabled .
Onboard LAN1 Controller ^(Note2)	Enable/Disable the onboard LAN1 controller. Options available: Enabled/Disabled. Default setting is Enabled .
Onboard LAN1 / LAN2 / LAN3 / LAN4 I/O ROM ^(Note2)	Enable/Disable the onboard LAN1/ LAN2/ LAN3/ LAN4 devices, and initializes device expansion ROM. Options available: Enabled/Disabled. Default setting is Enabled .
PCI Devices Common Settings	
Above 4G Decoding	Enable/Disable memory mapped I/O to 4GB or greater address space (Above 4G Decoding). Options available: Enabled/Disabled. Default setting is Enabled .
SR-IOV Support	If the system has SR-IOV capable PCIe devices, this item Enable/Disable Single Root IO Virtualization Support. Options available: Enabled/Disabled. Default setting is Enabled .

(Note1) This section is dependent on the available PCIe Slot.

(Note2) This section is dependent on the available LAN controller.

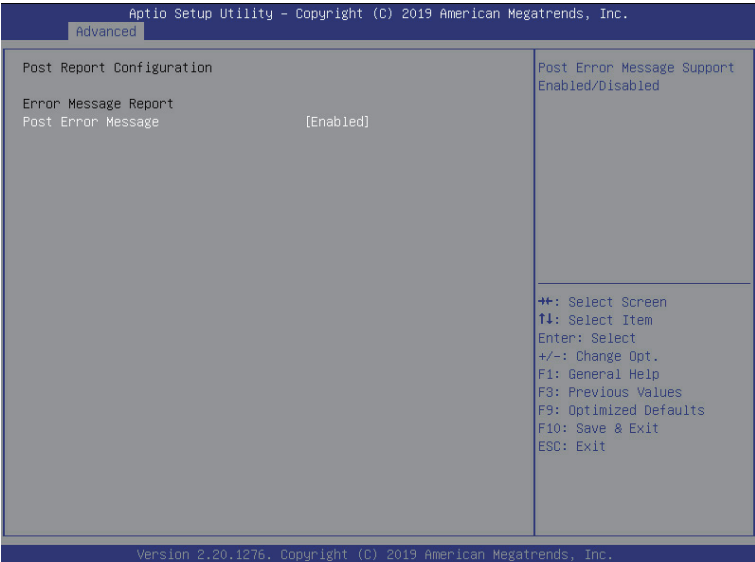

5-2-6 USB Configuration

Parameter	Description
USB Configuration	
USB Devices:	Displays the USB devices connected to the system.
XHCI Hand-off	Enable/Disable the XHCI (USB 3.0) Hand-off support. Options available: Enabled/Disabled. Default setting is Enabled .
XHCI Hand-off	Enable/Disable the XHCI (USB 3.0) Hand-off support. Options available: Enabled/Disabled. Default setting is Enabled .
USB Mass Storage Driver Support ^(Note)	Enable/Disable the USB Mass Storage Driver Support. Options available: Enabled/Disabled. Default setting is Enabled .
Port 60/64 Emulation	Enables the I/O port 60h/64h emulation support. This should be enabled for the complete USB Keyboard Legacy support for non-USB aware OS. Options available: Enabled/Disabled. Default setting is Enabled .

(Note) This item is present only if you attach USB devices.

5-2-7 Post Report Configuration

Parameter	Description
Post Report Configuration	
Error Message Report	
Post Error Message	Enable/Disable the POST Error Message support. Options available: Enabled/Disabled. Default setting is Enabled .

5-2-8 NVMe Configuration

Parameter	Description
NVMe Configuration	Displays the NVMe devices connected to the system
NVMe OPRom Select	Options available: BIOS Build-In/NVMe Device. Default setting is BIOS Build-In .

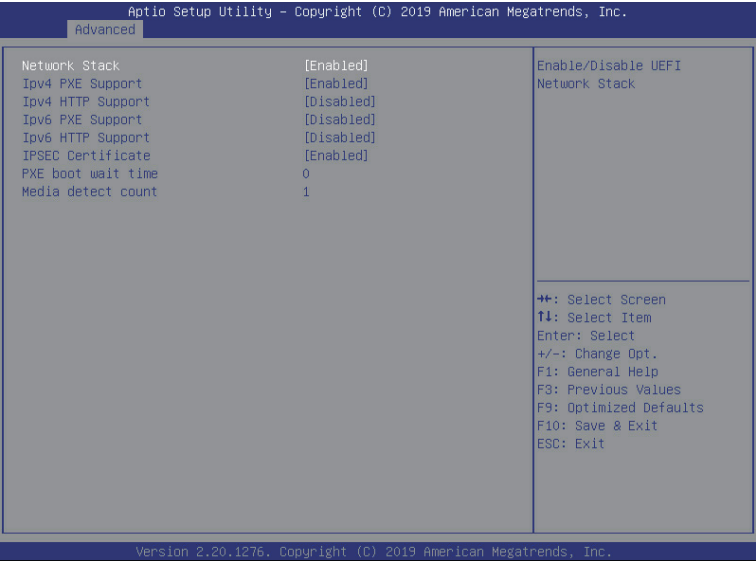

5-2-9 Chipset Configuration

Parameter	Description
Restore on AC Power Loss ^(Note)	Defines the power state to resume to after a system shutdown that is due to an interruption in AC power. When set to Last State, the system will return to the active power state prior to shutdown. When set to Power Off, the system remains off after power shutdown. Options available: Last State, Power Off, Power On, Unspecified. The default setting depends on the BMC setting.
Skip Above 4G Decoding for VGA	Enable/Disable 64bit capable devices to be decoded in Skip Above 4G Address VGA Space. Options available: Enabled/Disabled. Default setting is Disabled .
P2P Bridge IO Size	Sets P2P Bridge IO aligned to the size. Options available: 0x100, 0x150, 0x1000. Default setting is 0x1000 .
Chassis Opened Warning	Enable/Disable the chassis intrusion alert function. Options available: Enabled, Disabled, Clear. Default setting is Disabled .

(Note) When the power policy is controlled by BMC, please wait for 15-20 seconds for BMC to save the last power state.

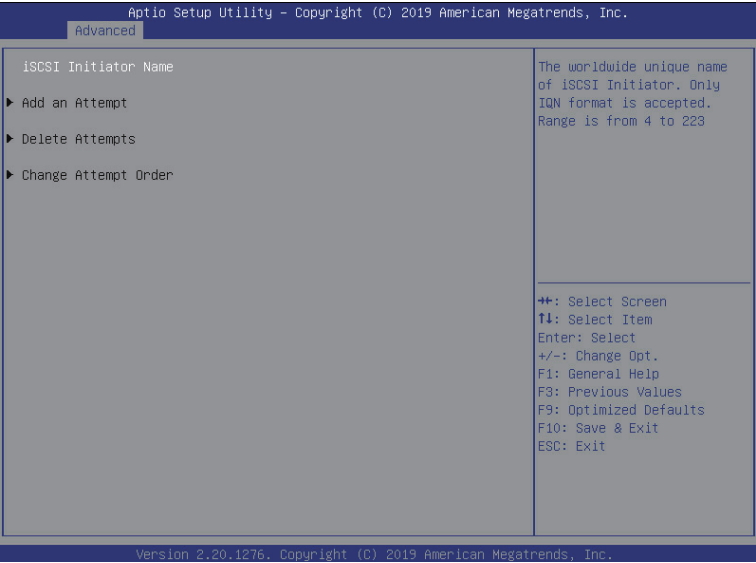

5-2-10 Network Stack Configuration

Parameter	Description
Network Stack	Enable/Disable the UEFI network stack. Options available: Enabled/Disabled. Default setting is Enabled .
Ipv4 PXE Support ^(Note)	Enable/Disable the Ipv4 PXE feature. Options available: Enabled/Disabled. Default setting is Enabled .
Ipv4 HTTP Support ^(Note)	Enable/Disable the Ipv4 HTTP feature. Options available: Enabled/Disabled. Default setting is Disabled .
Ipv6 PXE Support ^(Note)	Enable/Disable the Ipv6 PXE feature. Options available: Enabled/Disabled. Default setting is Disabled .
Ipv6 HTTP Support ^(Note)	Enable/Disable the Ipv6 HTTP feature. Options available: Enabled/Disabled. Default setting is Disabled .
IPSEC Certificate ^(Note)	Enable/Disable the IPSEC Certificate feature. Options available: Enabled/Disabled. Default setting is Enabled .
PXE boot wait time ^(Note)	Press the <+> / <-> keys to increase or decrease the desired values.
Media detect count ^(Note)	Press the <+> / <-> keys to increase or decrease the desired values.

(Note) This item appears when **Network Stack** is set to **Enabled**.

5-2-11 iSCSI Configuration

Parameter	Description
iSCSI Initiator Name	
Add an Attempt	Press [Enter] to configure advanced items.
Delete Attempts	Press [Enter] to configure advanced items.
Change Attempt Order	Press [Enter] to configure advanced items.

Enable SMX	<p>Enable/Disable the Secure Mode Extensions (SMX) support function.</p> <p>Options available: Enable/Disable. Default setting is Disable.</p>
Hardware Prefetcher	<p>Select whether to enable the speculative prefetch unit of the processor.</p> <p>Options available: Enable/Disable. Default setting is Disable.</p>
L2 RF0 Prefetch Disable	Options available: Enable/Disable. Default setting is Disable .
Adjacent Cache Prefetch	<p>When enabled, cache lines are fetched in pairs. When disabled, only the required cache line is fetched.</p> <p>Options available: Enable/Disable. Default setting is Enable.</p>
DCU Streamer Prefetcher	<p>Prefetches the next L1 data line based upon multiple loads in same cache line.</p> <p>Options available: Enable/Disable. Default setting is Enable.</p>
DCU IP Prefetcher	<p>Prefetches the next L1 Data line based upon sequential load history.</p> <p>Options available: Enable/Disable. Default setting is Enable.</p>
AES-NI	<p>Enable/Disable the AES-NI (Intel Advanced Encryption Standard New Instructions) support function.</p> <p>Options available: Enable/Disable. Default setting is Enable.</p>

5-3-2 Common RefCode Configuration

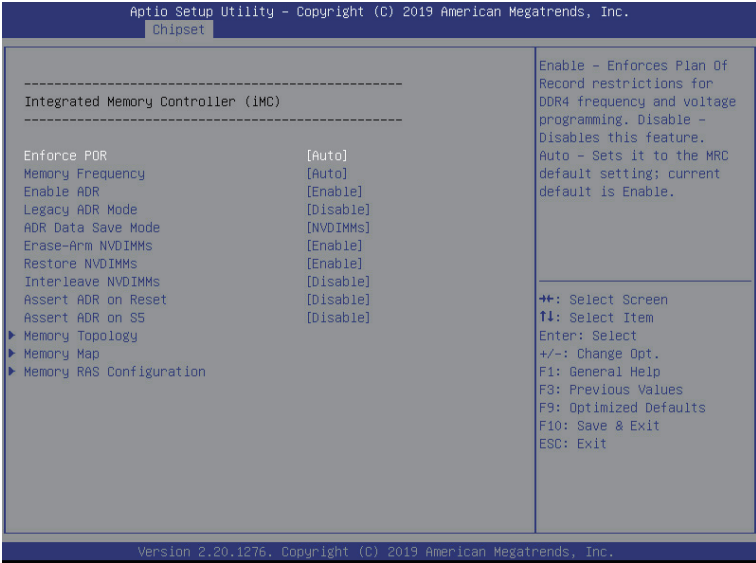

Parameter	Description
Common RefCode Configuration	
MMIO High Base	Selects the MMIO High Base setting. Options available: 56T, 40T, 24T, 16T, 4T, 1T. Default setting is 56T .
MMIO High Granularity Size	Selects the allocation size used to assign mmioh resources. Total mmioh space can be up to 32xgranularity. Per stack mmioh resource assignments are multiples of the granularity where 1 unit per stack is the default allocation. Options available: 1G, 4G, 16G, 64G, 256G, 1024G. Default setting is 256G .
Isoc Mode	Enable/Disable the Isochronous support in order to meet the QoS requirements (Quality of Service). Options available: Auto, Enable, Disable. Default setting is Auto .
Numa (Non-Uniform Memory Access)	Enable/Disable Non-uniform Memory Access (NUMA) support to improve the system performance. Options available: Enable/Disable. Default setting is Enable .

5-3-3 UPI Configuration

Parameter	Description
UPI Configuration	
UPI General Configuration	Press [Enter] to configure advanced items. <ul style="list-style-type: none"> ◆ UPI Status <ul style="list-style-type: none"> – Press [Enter] to view the UPI status. ◆ Link Frequency Select <ul style="list-style-type: none"> – Selects the UPI link frequency. – Options available: 9.6GB/s, 10.4GB/s, Auto. Default setting is Auto. ◆ SNC <ul style="list-style-type: none"> – Enable/Disable Sub NUMA Cluster function. – Options available: Disable, Enable, Auto. Default setting is Disable. ◆ Stale AtoS <ul style="list-style-type: none"> – Enable/Disable Stale A to S directory optimization. – Options available: Disable, Enable, Auto. Default setting is Disable. ◆ LLC dead line alloc <ul style="list-style-type: none"> – Enable/Disable fill dead lines in LLC. – Options available: Disable, Enable, Auto. Default setting is Auto.

5-3-4 Memory Configuration

Parameter	Description
Integrated Memory Controller (iMC)	
Enforce POR	When set to Enable, the system enforces Plan Of Record restrictions for DDR4 frequency and voltage programming. When set to Auto, the system sets it to the MRC default settings. Options available: Auto, POR, Disable. Default setting is Auto .
Memory Frequency	Configures the maximum memory frequency. Options available: Auto, 2133, 2400, 2666, 2933. Default setting is Auto .
Enable ADR	Enables the detecting and enabling of ADR (Asynchronous DRAM Refresh) function. Options available: Enable/Disable. Default setting is Enable .
Legacy ADR Mode	Enable/Disable the Legacy ADR Mode. Options available: Enable/Disable. Default setting is Disable .
ADR Data Save Mode	Specifies the Data Save Mode for ADR. Batterybacked or Type 01 NVDIMM. Options available: Disable, Batterybacked DIMMs, NVDIMMs. Default setting is NVDIMMs .
Erase-ARM NVDIMMs	Enable/Disable Erasing and Arming NVDIMMs. Options available: Enable/Disable. Default setting is Enable .
Restore NVDIMMs	Enable/Disable Automatic restoring of NVDIMMs. Options available: Enable/Disable. Default setting is Enable .

Parameter	Description
Interleave NVDIMMs	Controls if NVDIMMs are interleaved together or not. Options available: Enable/Disable. Default setting is Disable .
Assert ADR on Reset	Enable/Disable Assert ADR on Reset. Options available: Enable/Disable. Default setting is Disable .
Assert ADR on S5	Enable/Disable Assert ADR on S5. Options available: Enable/Disable. Default setting is Disable .
Memory Topology	Press [Enter] to view memory topology with DIMM population information.
Memory Map	Press [Enter] to configure advanced items. <ul style="list-style-type: none"> ◆ IMC Interleaving <ul style="list-style-type: none"> – controls the interleaving between the Integrated Memory Controllers (IMCs). – Options available: Auto, 1-way Interleave, 2-way Interleave. Default setting is Auto.
Memory RAS Configuration	Press [Enter] to configure advanced items. <ul style="list-style-type: none"> ◆ RAS Type <ul style="list-style-type: none"> – Displays the RAS type. ◆ Static Virtual Lockstep Mode <ul style="list-style-type: none"> – Enable/Disable the Static Virtual Lockstep mode. – Options available: Disable/Enable. Default setting is Disable. ◆ Mirror Mode <ul style="list-style-type: none"> – Mirror Mode will set entire 1LM/2LM memory in system to be mirrored, consequently reducing the memory capacity by half. Enables the Mirror Mode will disable the XPT Prefetch. – Options available: Disable/Enable Mirror Mode (1LM). Default setting is Disable. ◆ Memory Rank Sparing <ul style="list-style-type: none"> – Enable/Disable Memory Rank Sparing. This feature is only available on 1LM. – Options available: Disable/Enable. Default setting is Disable. ◆ Correctable Error Threshold <ul style="list-style-type: none"> – Correctable Error Threshold (1-32767) used for sparing, tagging, and leaky bucket. – Press the <+> / <-> keys to increase or decrease the desired values. ◆ SDDC Plus One <ul style="list-style-type: none"> – Enable/Disable SDDC Plus One. – Options available: Disable/Enable. Default setting is Disable.

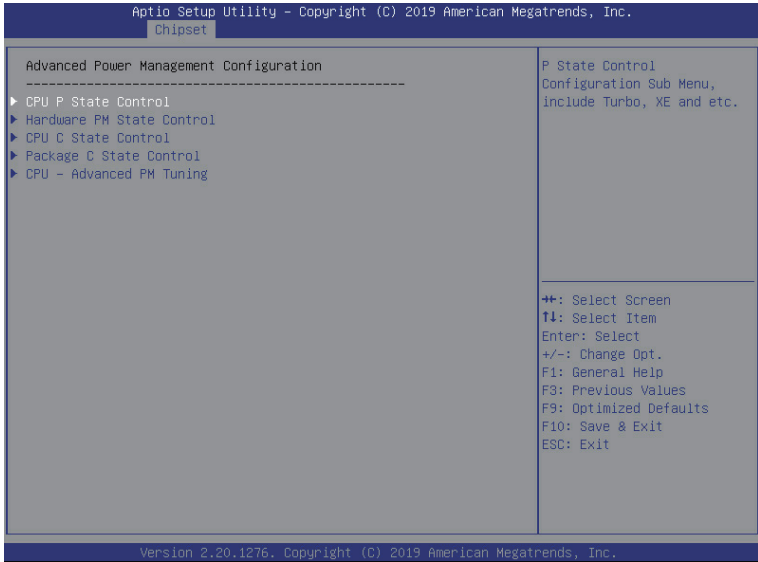

5-3-5 IIO Configuration

Parameter	Description
IIO Configuration	
Intel® VT for Directed I/O (VT-d)	<p>Press [Enter] to configure advanced items.</p> <ul style="list-style-type: none"> Intel® VT for Directed I/O (VT-d) <ul style="list-style-type: none"> Enable/Disable the Intel VT for Directed I/O (VT-d) support function by reporting the I/O device assignment to VMM through DMAR ACPI Tables. Options available: Enable/Disable. Default setting is Enable. ACS Control <ul style="list-style-type: none"> Enable: Programs ACS only to Chipset PCIe Root Ports Bridges. Disable: Programs ACS to all PCIe bridges. Default setting is Enable. Interrupt Remapping <ul style="list-style-type: none"> Enable/Disable the interrupt remapping support function. Options available: Enable/Disable. Default setting is Enable. PassThrough DMA <ul style="list-style-type: none"> Enable/Disable the Non-Isoch VT_D Engine PassThrough DMA support function. Options available: Enable/Disable. Default setting is Enable. ATS <ul style="list-style-type: none"> Enable/Disable Non-Isoch VT_D Engine ATS support. Options available: Enable/Disable. Default setting is Enable.

Parameter	Description
Intel® VT for Directed I/O (VT-d) (continued)	<ul style="list-style-type: none"> ◆ Post Interrupt <ul style="list-style-type: none"> – Enable/Disable VT_D posted interrupt. – Options available: Enable/Disable. Default setting is Enable. ◆ Coherency Support (Non-Isoch) <ul style="list-style-type: none"> – Enable/Disable Non-Isoch VT_D Engine Coherency support. – Options available: Enable/Disable. Default setting is Enable.
Intel® VMD technology	<p>Press [Enter] to configure advanced items.</p> <ul style="list-style-type: none"> ◆ Intel® VMD technology ◆ Intel® VMD Configuration <ul style="list-style-type: none"> – Enable/Disable the Intel VMD support function. – Options available: Enable/Disable. Default setting is Disable.
MCTP	<p>Enable/Disable MCTP (Management Component Transport Protocol). Options available: Enable/Disable. Default setting is Disable.</p>

5-3-6 Advanced Power Management Configuration

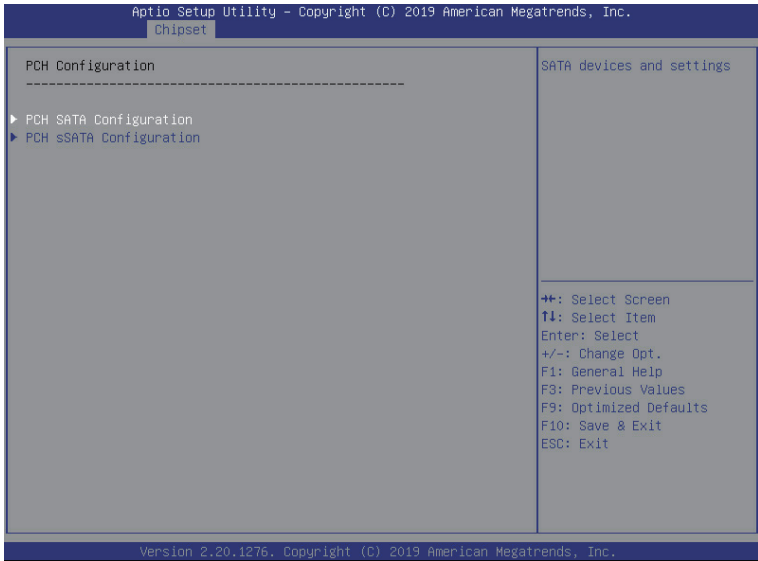

Parameter	Description
Advanced Power Management Configuration	
CPU P State Control	<p>Press [Enter] to configure advanced items.</p> <ul style="list-style-type: none">◆ SpeedStep (Pstates)<ul style="list-style-type: none">– Conventional Intel SpeedStep Technology switches both voltage and frequency in tandem between high and low levels in response to processor load.– Options available: Enable/Disable. Default setting is Enable.◆ Turbo Mode<ul style="list-style-type: none">– When this item is enabled, the processor will automatically ramp up the clock speed of 1-2 of its processing cores to improve its performance. When this item is disabled, the processor will not overclock any of its core.– Options available: Enable/Disable. Default setting is Enable.

Parameter	Description
Hardware PM State Control	<p>Press [Enter] to configure advanced items.</p> <ul style="list-style-type: none"> ◆ Hardware P-States <ul style="list-style-type: none"> – When this item is disabled, the processor hardware chooses a P-state based on OS Request (Legacy P-States). – In Native mode, the processor hardware chooses a P-state based on OS guidance. – In Out of Band mode, the processor hardware autonomously chooses a P-state (with no OS guidance). – Options available: Disable, Native Mode, Out of Band Mode, Native Mode with No Legacy Support. Default setting is Native Mode.
CPU C State Control	<p>Press [Enter] to configure advanced items.</p> <ul style="list-style-type: none"> ◆ Autonomous Core C-State <ul style="list-style-type: none"> – Enable/Disable the Autonomous Core C-State Control. – Options available: Enable/Disable. Default setting is Disable. ◆ CPU C6 Report <ul style="list-style-type: none"> – Allows you to determine whether to let the CPU enter C6 mode in system halt state. When enabled, the CPU core frequency and voltage will be reduced during system halt state to decrease power consumption. The C6 state is a more enhanced power-saving state than C1. – Options available: Disable/Enable/Auto. Default setting is Auto. ◆ Enhanced Halt State (C1E)^(Note) <ul style="list-style-type: none"> – Core C1E auto promotion control. Takes effect after reboot. – Options available: Enable/Disable. Default setting is Enable.
Package C State Control	<p>Configures the state for the C-State package limit.</p> <p>Options available: C0/C1 state, C2 state, C6(non Retention) state, C6(Retention) state, No Limit, Auto.</p> <p>Default setting is Auto.</p>
CPU - Advanced PM Tuning	<p>Press [Enter] to configure advanced items.</p> <ul style="list-style-type: none"> ◆ Energy Perf BIAS <ul style="list-style-type: none"> – Enters the Energy Perf BIAS submenu. ◆ Power Performance Tuning^(Note) <ul style="list-style-type: none"> – Tunes the Power Performance Configuration mode. When enabled, uses IA32_ENERGY_PERF_BIAS input from the core. When disabled, uses alternate performance BIAS input from ENERGY_PERF_BIAS_CONFIG. – Options available: OS Controls EPB/BIOS Controls EPB. Default setting is OS Controls EPB. ◆ Energy_PERF_BIAS_CFG mode <ul style="list-style-type: none"> – Selects the Energy Performance Bias Configuration Mode. – Options available: Performance, Balanced Performance, Balanced Power, Power. Default setting is Balanced Performance. – Please note that this item is configurable when Power Performance Tuning is set to BIOS Controls EPB.

(Note) Advanced items prompt when this item is defined.

5-3-7 PCH Configuration

Parameter	Description
PCH Configuration	
PCH SATA Configuration	<p>Press [Enter] to configure advanced items.</p> <ul style="list-style-type: none">◆ SATA Controller<ul style="list-style-type: none">– Enable/Disable SATA controller.– Options available: Enable/Disable. Default setting is Enable.◆ Configure SATA as<ul style="list-style-type: none">– Configures on chip SATA type.– AHCI Mode: When set to AHCI, the SATA controller enables its AHCI functionality. Then the RAID function is disabled and cannot be access the RAID setup utility at boot time.– RAID Mode: When set to RAID, the SATA controller enables both its RAID and AHCI functions. You will be allowed to access the RAID setup utility at boot time.– Options available: AHCI/RAID. Default setting is AHCI.◆ Alternate Device ID on RAID^(Note 1)<ul style="list-style-type: none">– Enable/Disable Alternate Device ID on RAID mode.– Options available: Enable/Disable. Default setting is Disabled– Please note that this option appears when HDD is in RAID Mode.◆ SATA Port 0/1/2/3/4/5/6/7<ul style="list-style-type: none">– The category identifies SATA hard drives that are installed in the computer. System will automatically detect HDD type.

Parameter	Description
PCH SATA Configuration (continued)	<ul style="list-style-type: none"> ◆ Port 0/1/2/3/4/5/6/7 <ul style="list-style-type: none"> – Enable/Disable Port 0/1/2/3/4/5/6/7 device. – Options available: Enable/Disable. Default setting is Enable. ◆ Hot Plug (for Port 0/1/2/3/4/5/6/7)^(Note 2) <ul style="list-style-type: none"> – Enable/Disable HDD Hot-Plug function. – Options available: Enable/Disable. Default setting is Disable. ◆ Spin Up Device (for Port 0/1/2/3/4/5/6/7)^(Note 2) <ul style="list-style-type: none"> – On an edge detect from 0 to 1, the PCH starts a COM reset initialization to the device. – Options available: Enable/Disable. Default setting is Disable.
PCH sSATA Configuration	<ul style="list-style-type: none"> ◆ sSATA Controller <ul style="list-style-type: none"> – Enable/Disable sSATA controller. – Options available: Enable/Disable. Default setting is Enable. ◆ Configure sSATA as <ul style="list-style-type: none"> – Configures on chip SATA type. – AHCI Mode: When set to AHCI, the SATA controller enables its AHCI functionality. Then the RAID function is disabled and cannot be access the RAID setup utility at boot time. – RAID Mode: When set to RAID, the SATA controller enables both its RAID and AHCI functions. You will be allowed to access the RAID setup utility at boot time. – Options available: AHCI/RAID. Default setting is AHCI. ◆ Alternate Device ID on RAID^(Note 1) <ul style="list-style-type: none"> – Enable/Disable Alternate Device ID on RAID mode. – Options available: Enable/Disable. Default setting is Disabled. – Please note that this option appears when HDD is in RAID Mode. ◆ sSATA Port 0/1/2/3/4/5 <ul style="list-style-type: none"> – The category identifies sSATA hard drives that are installed in the computer. System will automatically detect HDD type. ◆ Port 0/1/2/3/4/5 <ul style="list-style-type: none"> – Enable/Disable Port 0/1/2/3/4/5 device. – Options available: Enable/Disable. Default setting is Enable. ◆ Hot Plug (for Port 0/1/2/3/4/5)^(Note 2) <ul style="list-style-type: none"> – Enable/Disable HDD Hot-Plug function. – Options available: Enable/Disable. Default setting is Disable. ◆ Spin Up Device (for Port 0/1/2/3/4/5)^(Note 2) <ul style="list-style-type: none"> – On an edge detect from 0 to 1, the PCH starts a COM reset initialization to the device. – Options available: Enable/Disable. Default setting is Disabled.

(Note 1) Only appears when HDD sets to **RAID** Mode.

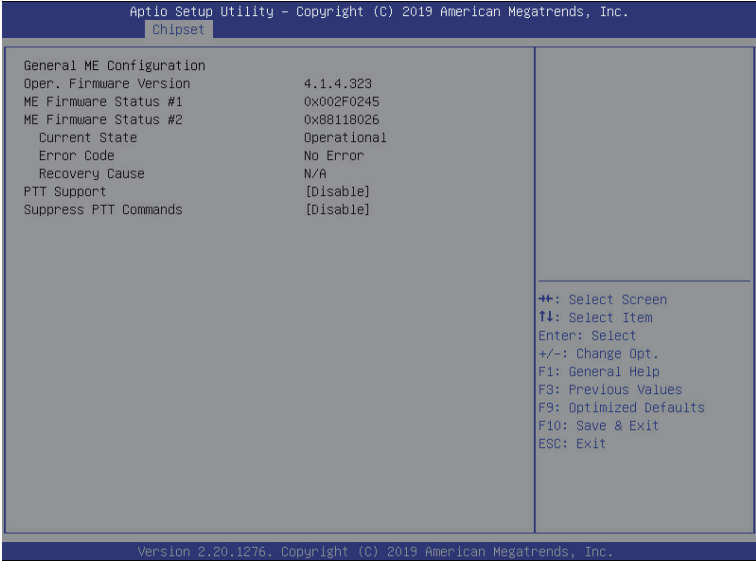

(Note 2) Only Supported when HDD is in **AHCI** or **RAID** Mode.

5-3-8 Miscellaneous Configuration

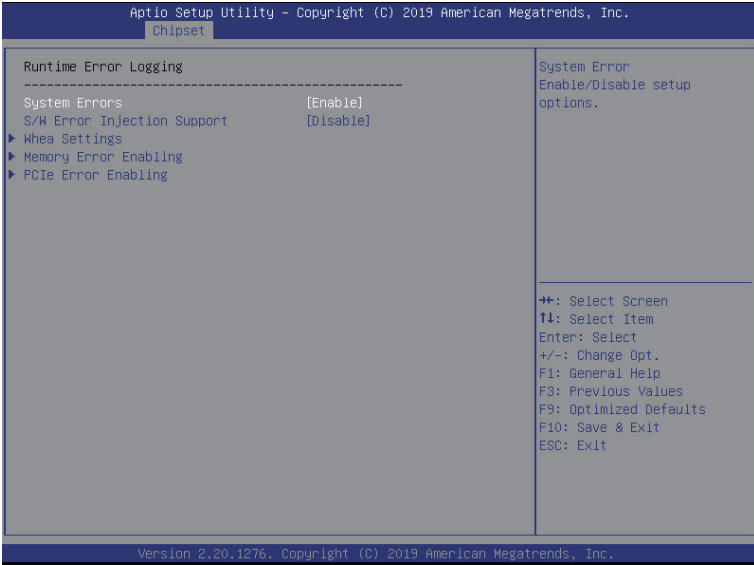

Parameter	Description
Miscellaneous Configuration	
Active Video	Selects the active video type. Options available: Auto, Onboard Device, PCIE Device. Default setting is Auto .

5-3-9 Server ME Configuration

Parameter	Description
General ME Configuration	
Oper. Firmware Version	Displays the operational firmware version.
ME Firmware Status #1/#2	Displays ME Firmware status information.
Current State (for ME Firmware)	Displays ME Firmware current status information.
Error Code (for ME Firmware)	Displays ME Firmware status error code.
Recovery Cause (for ME Firmware)	Displays ME Firmware recovery cause.
PTT Support	Displays if the system supports the Intel® Platform Trust Technology.
Suppress PTT Commands	Displays if the system supports to Bypass TPM2 commands submitting to PTT Firmware.

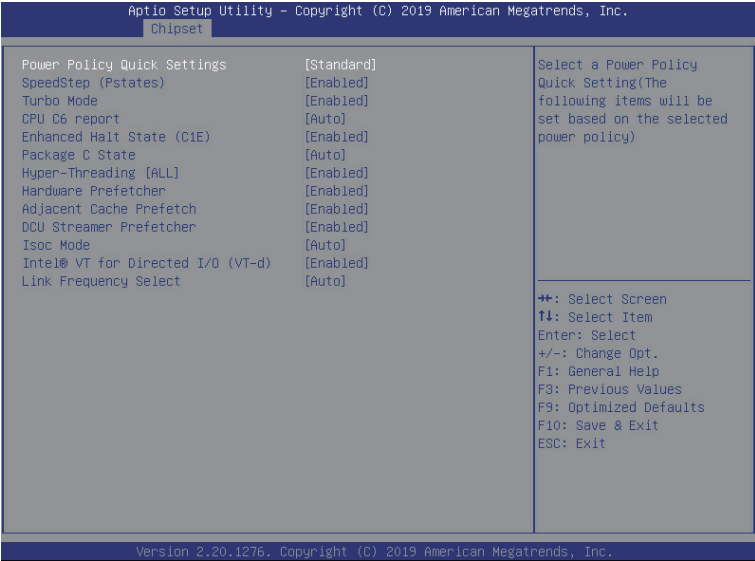

5-3-10 Runtime Error Logging Settings

Parameter	Description
Runtime Error Logging	
System Errors	Enable/Disable system error logging function. Options available: Enable/Disable. Default setting is Enable .
S/W Error Injection Support	Enable/Disable software injection error logging function. Options available: Enable/Disable. Default setting is Disable .
Whea Settings	Press [Enter] to configure advanced items. <ul style="list-style-type: none">◆ WHEA (Windows Hardware Error Architecture) Support<ul style="list-style-type: none">– Enable/Disable WHEA Support.– Options available: Enable/Disable. Default setting is Enable.
Memory Error Enabling	Press [Enter] to configure advanced items. <ul style="list-style-type: none">◆ Memory Error<ul style="list-style-type: none">– Enable/Disable Memory Error.– Options available: Enable/Disable. Default setting is Enable.◆ Memory Corrected Error<ul style="list-style-type: none">– Enable/Disable Memory Corrected Error.– Options available: Enable/Disable. Default setting is Enable.◆ Uncorrected Error disable Memory<ul style="list-style-type: none">– Enable/Disable the Memory that triggers Uncorrected Error.– Options available: Enable/Disable. Default setting is Disable.

Parameter	Description
PCIe Error Enabling	<p>Press [Enter] to configure advanced items.</p> <ul style="list-style-type: none"> ◆ Corrected Error <ul style="list-style-type: none"> – Enables and escalates Correctable Errors to error pins. – Options available: Enable/Disable. Default setting is Enable. ◆ Uncorrected Error <ul style="list-style-type: none"> – Enables and escalates Uncorrectable/Recoverable Errors to error pins. – Options available: Enable/Disable. Default setting is Enable. ◆ Fatal Error Enable <ul style="list-style-type: none"> – Enables and escalates Fatal Errors to error pins. – Options available: Enable/Disable. Default setting is Enable. ◆ SERR Propagation <ul style="list-style-type: none"> – Enable/Disable SERR propagation. – Options available: Enable/Disable. Default setting is Enable. ◆ PERR Propagation <ul style="list-style-type: none"> – Enable/Disable PERR propagation. – Options available: Enable/Disable. Default setting is Enable.

5-3-11 Power Policy

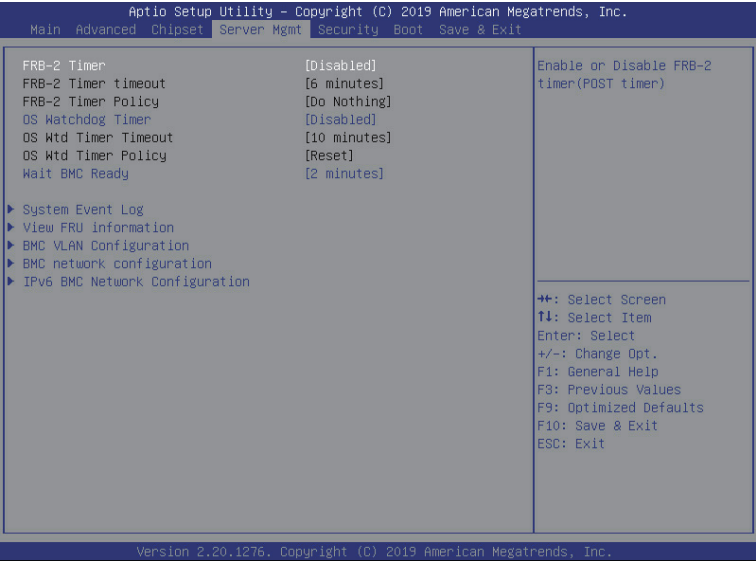

Parameter	Description
Power Policy Quick Settings	Selects a Power Policy Quick Setting. Options available: Standard, Best Performance, Energy Efficient, Turbo Lock.
SpeedStep (Pstates)	Conventional Intel SpeedStep Technology switches both voltage and frequency in tandem between high and low levels in response to processor load. Options available: Enable/Disable. Default setting is Enable .
Turbo Mode	When this item is enabled, the processor will automatically ramp up the clock speed of 1-2 of its processing cores to improve its performance. When this item is disabled, the processor will not overclock any of its core. Options available: Enable/Disable. Default setting is Enable .
CPU C6 report	Allows you to determine whether to let the CPU enter C6 mode in system halt state. When enabled, the CPU core frequency and voltage will be reduced during system halt state to decrease power consumption. The C6 state is a more enhanced powersaving state than C1. Options available: Disable, Enable, Auto. Default setting is Auto .
Enhanced Halt State (C1E) ^(Note)	Core C1E auto promotion control. Takes effect after reboot. Options available: Enable/Disable. Default setting is Enable .

(Note) Advanced items prompt when this item is defined.

Parameter	Description
Package C State	Configures the state for the C-State package limit. Options available: C0/C1 state, C2 state, C6(non Retention) state, C6(Retention) state, No Limit, Auto. Default setting is Auto .
Hyper-Threading [ALL]	The Hyper Threading Technology allows a single processor to execute two or more separate threads concurrently. When hyper-threading is enabled, multi-threaded software applications can execute their threads, thereby improving performance. Options available: Enable/Disable. Default setting is Enable .
Hardware Prefetcher	Select whether to enable the speculative prefetch unit of the processor. Options available: Enable/Disable. Default setting is Disable .
Adjacent Cache Prefetch	When enabled, cache lines are fetched in pairs. When disabled, only the required cache line is fetched. Options available: Enable/Disable. Default setting is Enable .
DCU Streamer Prefetcher	Prefetches the next L1 data line based upon multiple loads in same cache line. Options available: Enable/Disable. Default setting is Enable .
Isoc Mode	Enable/Disable the Isochronous support in order to meet the QoS requirements (Quality of Service). Options available: Auto, Enable, Disable. Default setting is Auto .
Intel® VT for Directed I/O (VT-d)	Enable/Disable the Intel VT for Directed I/O (VT-d) support function by reporting the I/O device assignment to VMM through DMAR ACPI Tables. Options available: Enable/Disable. Default setting is Enable .
Link Frequency Select	Selects the UPI link frequency. Options available: 9.6GB/s, 10.4GB/s, Auto. Default setting is Auto .

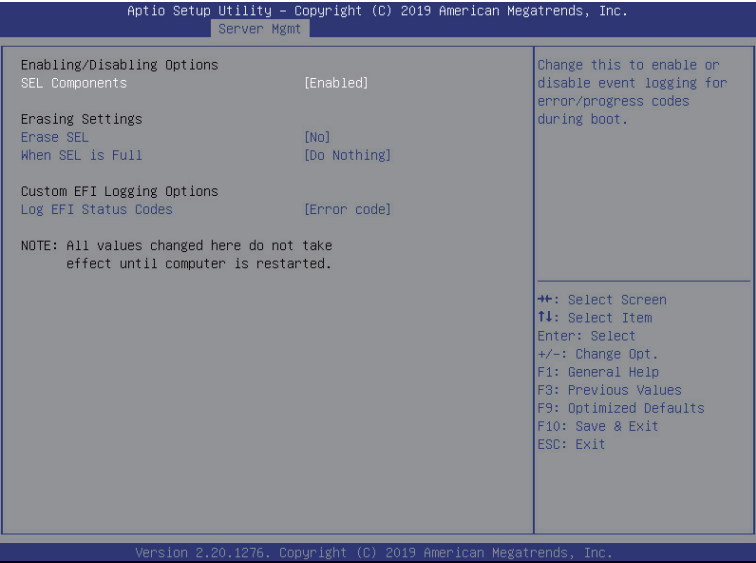

5-4 Server Management Menu

Parameter	Description
FRB-2 Timer	Enable/Disable FRB-2 timer (POST timer). Options available: Enabled/Disabled. Default setting is Disabled .
FRB-2 Timer timeout	Configure the FRB2 Timer timeout. Options available: 3 minutes, 4 minutes, 5 minutes, 6 minutes. Default setting is 6 minutes . Please note that this item is configurable when FRB-2 Timer is set to Enabled.
FRB-2 Timer Policy	Configure the FRB2 Timer policy. Options available: Do Nothing, Reset, Power Down, Power Cycle. Default setting is Do Nothing . Please note that this item is configurable when FRB-2 Timer is set to Enabled.
OS Watchdog Timer	Enable/Disable OS Watchdog Timer function. Options available: Enabled/Disabled. Default setting is Disabled .
OS Wtd Timer Timeout	Configure OS Watchdog Timer. Options available: 5 minutes, 10 minutes, 15 minutes, 20 minutes. Default setting is 5 minutes . Please note that this item is configurable when OS Watchdog Timer is set to Enabled.

Parameter	Description
OS Wtd Timer Policy	Configure OS Watchdog Timer Policy. Options available: Reset, Do Nothing, Power Down, Power Cycle. Default setting is Reset . Please note that this item is configurable when OS Watchdog Timer is set to Enabled.
Wait BMC Ready	POST wait BMC ready and reboot system. Options available: Disabled, 2 minutes, 4 minutes, 6 minutes. Default setting is 2 minutes .
System Event Log	Press [Enter] to configure advanced items.
View FRU Information	Press [Enter] to view the advanced items.
BMC VLAN Configuration	Press [Enter] to configure advanced items.
BMC network configuration	Press [Enter] to configure advanced items.
IPv6 BMC Network Configuration	Press [Enter] to configure advanced items.

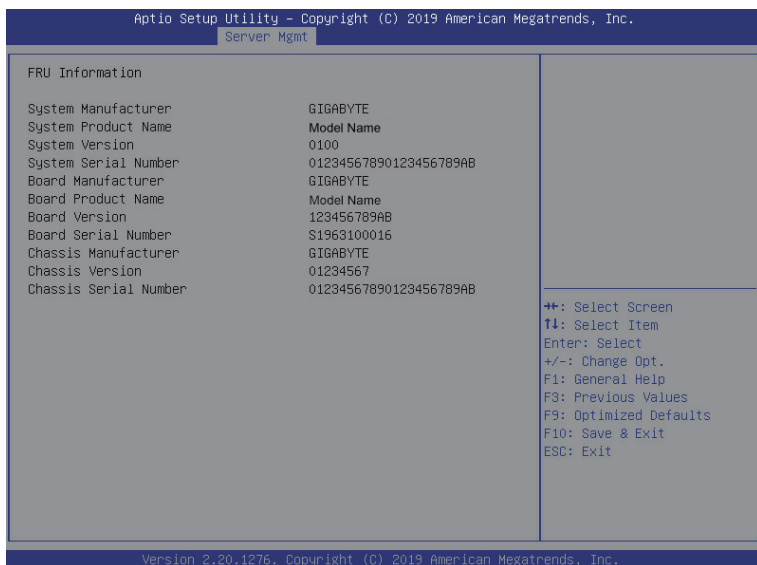

5-4-1 System Event Log

Parameter	Description
Enabling / Disabling Options	
SEL Components	Change this item to enable or disable all features of System Event Logging during boot. Options available: Enabled/Disabled. Default setting is Enabled .
Erasing Settings	
Erase SEL	Choose options for erasing SEL. Options available: No/Yes, On next reset/Yes, On every reset. Default setting is No .
When SEL is Full	Choose options for reactions to a full SEL. Options available: Do Nothing, Erase Immediately, Delete Oldest Record. Default setting is Do Nothing .
Custom EFI Logging Options	
Log EFI Status Codes	Enable/Disable the logging of EFI Status Codes (if not already converted to legacy). Options available: Disabled, Both, Error code, Progress code. Default setting is Error code .

5-4-2 View FRU Information

The FRU page is a simple display page for basic system ID information, as well as System product information. Items on this window are non-configurable.

(Note) The model name will vary depends on the product you purchased

5-4-3 BMC VLAN Configuration

Aptio Setup Utility - Copyright (C) 2019 American Megatrends, Inc.

Server Mgmt

BMC VLAN Configuration

BMC VLAN ID

BMC VLAN Priority

VLAN ID of new VLAN or existing VLAN, valid value is 0~4094, 0 is disable VLAN

++: Select Screen
↑↓: Select Item
Enter: Select
+/-: Change Opt.
F1: General Help
F3: Previous Values
F9: Optimized Defaults
F10: Save & Exit
ESC: Exit

Version 2.20.1276, Copyright (C) 2019 American Megatrends, Inc.

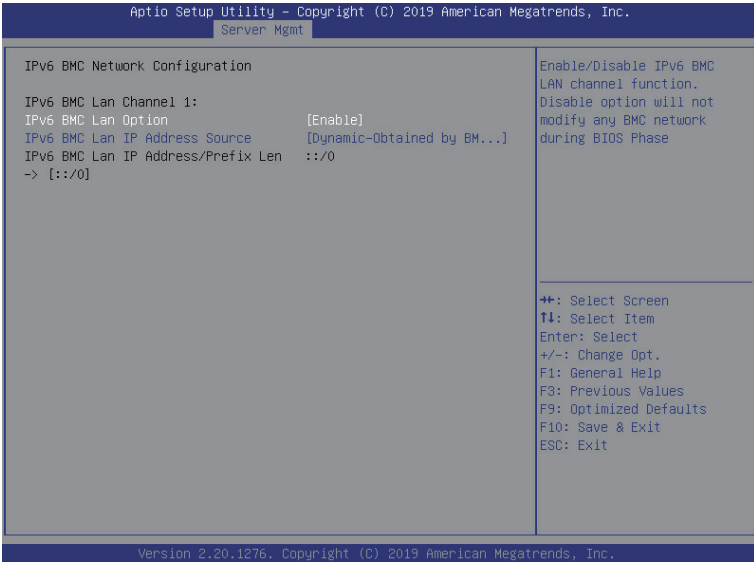

Parameter	Description
BMC VLAN Configuration	
BMC VLAN ID	Select to configure BMC VLAN ID. The valid range is from 0 to 4094. When set to 0, BMC VLAN ID will be disabled.
BMC VLAN Priority	Select to configure BMC VLAN Priority. The valid range is from 0 to 7. When BMC VLAN ID is set to 0, BMC VLAN Priority will not be selected.

5-4-4 BMC Network Configuration

Parameter	Description
BMC network configuration	
Lan Channel 1	
Configuration Address source	Select to configure LAN channel parameters statically or dynamically (DHCP). Do nothing option will not modify any BMC network parameters during BIOS phase. Options available: Unspecified, Static, DynamicBmcDhcp. Default setting is DynamicBmcDhcp .
Station IP address	Displays IP Address information.
Subnet mask	Displays Subnet Mask information. Please note that the IP address must be in three digitals, for example, 192.168.000.001.
Router IP address	Displays the Router IP Address information.
Station MAC address	Displays the MAC Address information.
Real-time get BMC network address	Press [Enter] to synchronize the BMC network parameter values.

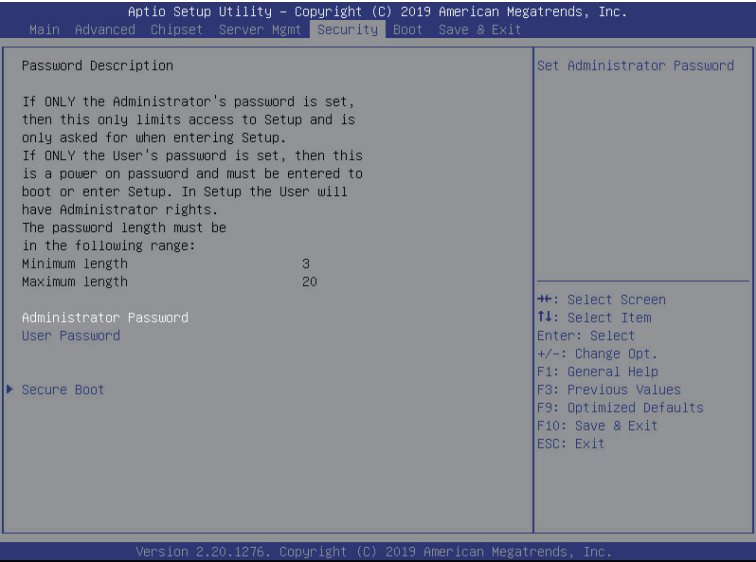

5-4-5 IPv6 BMC Network Configuration

Parameter	Description
IPv6 BMC Network Configuration	
IPv6 BMC Lan Channel 1	
IPv6 BMC Lan Option	Enable/Disable IPv6 BMC LAN channel function. When this item is disabled, the system will not modify any BMC network during BIOS phase. Options available: Unspecified, Enable, Disable. Default setting is Enable .
IPv6 BMC Lan IP Address Source	Select to configure LAN channel parameters statically or dynamically (by BIOS or BMC). Options available: Unspecified, Static, Dynamic-Obtained by BMC running DHCP. Default setting is Dynamic-Obtained by BMC running DHCP .
IPv6 BMC Lan IP Address/Prefix Length	Check if the IPv6 BMC LAN IP address matches those displayed on the screen.

5-5 Security Menu

The Security menu allows you to safeguard and protect the system from unauthorized use by setting up access passwords.

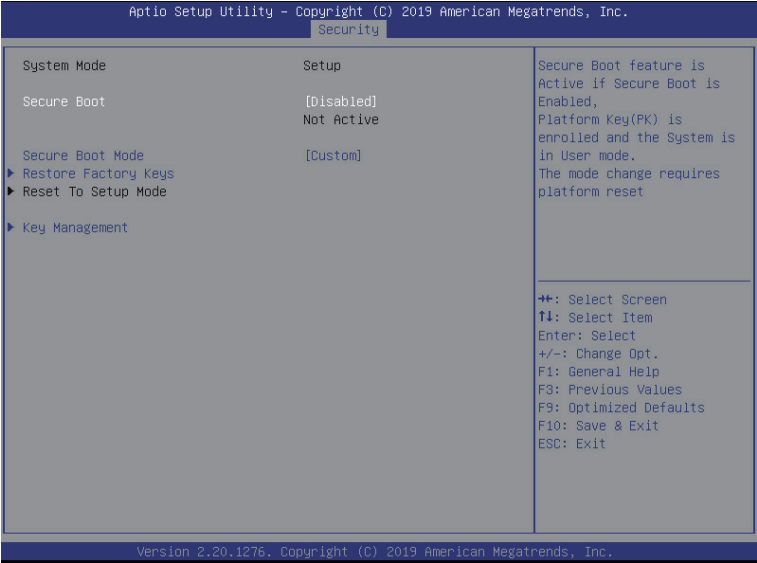

There are two types of passwords that you can set:

- Administrator Password
Entering this password will allow the user to access and change all settings in the Setup Utility.
- User Password
Entering this password will restrict a user's access to the Setup menus. To enable or disable this field, a Administrator Password must first be set. A user can only access and modify the System Time, System Date, and Set User Password fields.

Parameter	Description
Administrator Password	Press [Enter] to configure the administrator password.
User Password	Press [Enter] to configure the user password.
Secure Boot	Press [Enter] to configure advanced items.

5-5-1 Secure Boot

The Secure Boot submenu is applicable when your device is installed the Windows® 8 (or above) operating system.

Parameter	Description
System Mode	Displays if the system is in User mode or Setup mode.
Secure Boot	Enable/ Disable the Secure Boot function. Options available:Enabled/Disabled. Default setting is Disabled .
Secure Boot Mode ^(Note)	Secure Boot requires all the applications that are running during the booting process to be pre-signed with valid digital certificates. This way, the system knows all files being loaded before Windows loads to the login screen have not been tampered with. When set to Standard, it will automatically load the Secure Boot keys form the BIOS databases. When set to Custom, you can customize the Secure Boot settings and manually load its keys from the BIOS database. Options available: Standard/Custom. Default setting is Standard .
Restore Factory Keys	Installs all factory default keys. It will force the system in User Mode..
Reset To Setup Mode	Installs the default keys when system is in setup mode.

(Note) Advanced items prompt when this item is set to **Custom**.

Parameter	Description
Key Management	<p>Press [Enter] to configure advanced items.</p> <p>Please note that this item is configurable when Secure Boot Mode is set to Custom.</p> <ul style="list-style-type: none"> ◆ Factory Key Provision <ul style="list-style-type: none"> – Allows to provision factory default Secure Boot keys when system is in Setup Mode. – Options available: Enabled/Disabled. Default setting is Disabled. ◆ Restore Factory Keys <ul style="list-style-type: none"> – Installs all factory default keys. It will force the system in User Mode. – Options available: Yes/No. ◆ Enroll Efi Image <ul style="list-style-type: none"> – Press [Enter] to enroll SHA256 hash of the binary into Authorized Signature Database (db). ◆ Restore DB defaults <ul style="list-style-type: none"> – Restore DB variable to factory defaults. ◆ Secure Boot variable <ul style="list-style-type: none"> – Displays the current status of the variables used for secure boot. ◆ Platform Key (PK) <ul style="list-style-type: none"> – Displays the current status of the Platform Key (PK). – Press [Enter] to configure a new PK. – Options available: Set New. ◆ Key Exchange Keys (KEK) <ul style="list-style-type: none"> – Displays the current status of the Key Exchange Key Database (KEK). – Press [Enter] to configure a new KEK or load additional KEK from storage devices. – Options available: Set New/Append. ◆ Authorized Signatures (DB) <ul style="list-style-type: none"> – Displays the current status of the Authorized Signature Database. – Press [Enter] to configure a new DB or load additional DB from storage devices. – Options available: Set New/Append. ◆ Forbidden Signatures (DBX) <ul style="list-style-type: none"> – Displays the current status of the Forbidden Signature Database. – Press [Enter] to configure a new dbx or load additional dbx from storage devices. – Options available: Set New/Append. ◆ Authorized TimeStamps (DBT) <ul style="list-style-type: none"> – Displays the current status of the Authorized TimeStamps Database. – Press [Enter] to configure a new DBT or load additional DBT from storage devices. – Options available: Set New/Append. ◆ OsRecovery Signatures <ul style="list-style-type: none"> – Displays the current status of the OsRecovery Signature Database. – Press [Enter] to configure a new OsRecovery Signature or load additional OsRecovery Signature from storage devices. – Options available: Set New/Append.

5-6 Boot Menu

The Boot menu allows you to set the drive priority during system boot-up. BIOS setup will display an error message if the legacy drive(s) specified is not bootable.

Parameter	Description
Boot Configuration	
Setup Prompt Timeout	Number of seconds to wait for setup activation key. 65535 (0xFFFF) means indefinite waiting. Press the numeric keys to input the desired values.
Bootup NumLock State	Enable/Disable the Bootup NumLock function. Options available: On/Off. Default setting is Off .
Quiet Boot	Enable/Disable showing the logo during POST. Options available: Enabled/Disabled. Default setting is Enabled .
Setup Flash	Press [Enter] to run setup flash.
Boot mode select	Selects the boot mode. Options available: LEGACY/UEFI. Default setting is UEFI .

Parameter	Description
FIXED BOOT ORDER Priorities	
Boot Option #1 / #2 / #3 / #4 / #5	<p>Press [Enter] to configure the boot priority. By default, the server searches for boot devices in the following sequence:</p> <ol style="list-style-type: none"> 1. Hard drive. 2. CD-COM/DVD drive. 3. USB device. 4. Network. 5. UEFI.
UEFI USB Drive BBS Priorities	Press [Enter] to configure the boot priority.
UEFI Network Drive BBS Priorities	Press [Enter] to configure the boot priority.
UEFI Application Boot Priorities	Press [Enter] to configure the boot priority.

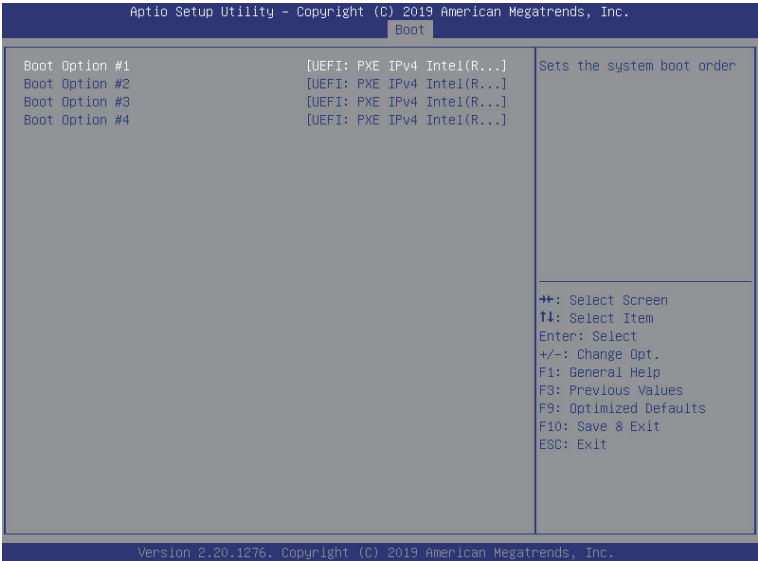

5-6-1 UEFI USB Drive BBS Priorities

The UEFI USB drive BBS priorities submenu allows you to specify the boot device priority from the available UEFI network drives during system boot-up. BIOS setup will display an error message if the legacy drive(s) specified is not bootable.

5-6-2 UEFI NETWORK Drive BBS Priorities

The UEFI network drive BBS priorities submenu allows you to specify the boot device priority from the available UEFI network drives during system boot-up. BIOS setup will display an error message if the legacy drive(s) specified is not bootable.

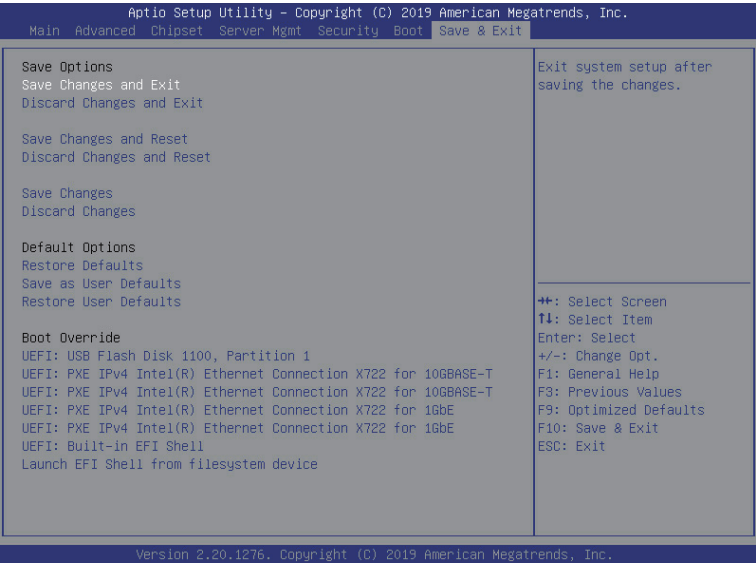

5-6-3 UEFI Application Boot Priorities

The UEFI application boot priorities submenu allows you to specify the boot device priority from the available UEFI applications during system boot-up. BIOS setup will display an error message if the legacy drive(s) specified is not bootable.

5-7 Save & Exit Menu

The Save & Exit menu displays the various options to quit from the BIOS setup. Highlight any of the exit options then press <Enter>.

Parameter	Description
Save Options	
Save Changes and Exit	Saves changes made and closes the BIOS setup. Options available: Yes/No.
Discard Changes and Exit	Discards changes made and exits the BIOS setup. Options available: Yes/No.
Save Changes and Reset	Restarts the system after saving the changes made. Options available: Yes/No.
Discard Changes and Reset	Restarts the system without saving any changes. Options available: Yes/No.
Save Changes	Saves changes made in the BIOS setup. Options available: Yes/No.
Discard Changes	Discards changes made and closes the BIOS setup. Options available: Yes/No.

Parameter	Description
Default Options	
Restore Defaults	<p>Loads the default settings for all BIOS setup parameters. Setup Defaults are quite demanding in terms of resources consumption. If you are using low-speed memory chips or other kinds of low-performance components and you choose to load these settings, the system might not function properly.</p> <p>Options available: Yes/No.</p>
Save as User Defaults	<p>Saves the changes made as the user default settings.</p> <p>Options available: Yes/No.</p>
Restore User Defaults	<p>Loads the user default settings for all BIOS setup parameters.</p> <p>Options available: Yes/No.</p>
Boot Override	Press [Enter] to configure the device as the boot-up drive.

5-8 BIOS POST Codes

5-8-4 Intel UPI POST Codes

Initialize KTIRC input structure default values	0xA0
Collect info such as SBSP, Boot Mode, Reset type etc	0xA1
Setup IO SADs in SBSP to access the config space	0xA2
Setup up minimum path between SBSP & other sockets Add the node to the tree Parse the LEP of the discovered socket Check if the system has the supported topology Setup the boot path for the parent which is not directly connected to Legacy CPU Setup path from SBSP to the new found node	0xA3
Setup IO SADs in PBSP to access the config space	0xA4
System configurations that require some kind of reset	0xA5
Sync up with PBSPs	0xA6
Topology discovery and route calculation	0xA7
Program final route	0xA8
Program final IO SAD setting	0xA9
Protocol layer and other Uncore settings	0xAA
Transition links to full speed operation	0xAB
Phy layer settings	0xAC
Link layer settings	0xAD
Coherency Settings	0xAE
KTIRC is done	0xAF

5-8-5 Intel UPI Error Codes

When system BSP tries to setup path for remote sockets or sends a Boot_Go command to remote socket in SetupSbspPathToAllSockets() or SyncUpPbspForReset(). If the remote socket(s) hasn't checked-in, assert; it is a fatal condition, this error will be logged. No retry. <i>RC Behavior: System Halt</i>	0xD8
When SBSP tries to add this remote socket into system topology tree in SetupSbspPathToAllSockets(), there are some errors occur in the data structure. No retry. <i>RC Behavior: The current Socket is not added to the tree.</i> When SBSP setups the boot path for the parent which is not directly connected to Legacy CPU in SetupSbspPathToAllSockets(). The Child is not an immediate neighbor of Parent. No retry.	0xDA
SAD setup error <i>RC Behavior: System Halt</i>	0xDB

Unsupported topology <i>RC Behavior: System Halt</i>	0xDC
SBSP cannot find KPIRC TXEQ Parameters for this link in GetSocketLinkEparams(). No retry. <i>RC Behavior: System Halt</i>	0xDD

5-8-6 Intel MRC POST Codes

Detect DIMM population	0xB0
Set DDR frequency	0xB1
Gather remaining SPD data	0xB2
Program registers on the memory controller level	0xB3
Evaluate RAS modes and save rank information	0xB4
Program registers on the channel level	0xB5
DDRIO Initialization	0xB6
Train DDR	0xB7
Initialize CLTT/OLTT	0xB8
Hardware memory test and init	0xB9
Execute memory init	0xBA
Program memory map and interleaving	0xBB
Program RAS configuration	0xBC
Rank margin tool	0xBD
MRC is done	0xBF

5-8-7 Intel MRC Error Codes

No memory was detected	0xE8
Memory test failure	0xEB
Different dimm types are detected installed in the system	0xED
Number of HAs found in system greater than MAX_HA defined in MRC build	0xEE
Indicates a CLTT table structure error	0xEF
Invalid VR mode, unable to set DRAM VDD	0xF0
Failure occurred reserving memory for IOT	0xF1
Reference code assert	0xF2
Unsupported MC frequency set	0xF3
Unable to get current MC frequency	0xF4

5-8-8 Intel PM POST Codes

Start of PPM structure initialization	0xD0
PPM CSR programming	0xD1
PPM MSR programming	0xD2
Start of PState transition init	0xD3
PPM exit	0xD4
PPM On ready to boot event	0xD5

5-8-9 Intel PM POST Codes

Start of IIO early Initialization	0xE0
Pre Link training	0xE1
Start of Gen3 EQ training	0xE2
Start of PState transition init	0xE3
Gen3 parameters override	0xE4
End of IIO Early Initialization	0xE5
Start of IIO Late initialization	0xE6
PCIe port initialization	0xE7
IOAPIC initialization	0xE8
VTD initialization	0xE9
IOAT initialization	0xEA
DFX initialization	0xEB
NTB initialization	0xEC
Security Initialization	0xED
IIO late initialization	0xEE
IIO On ready to boot event	0xEF

5-9 BIOS POST Beep code (AMI standard)

5-9-1 PEI Beep Codes

# of Beeps	Description
1	Memory not Installed.
1	Memory was installed twice (InstallPeiMemory routine in PEI Core called twice)
2	Recovery started
3	DXE IPL was not found
3	DXE Core Firmware Volume was not found
4	Recovery failed
4	S3 Resume failed
7	Reset PPI is not available

5-9-2 DXE Beep Codes

# of Beeps	Description
1	Invalid password
4	Some of the Architectural Protocols are not available
5	No Console Output Devices are found
5	No Console Input Devices are found
6	Flash update is failed
7	Reset protocol is not available
8	Platform PCI resource requirements cannot be met
