# **GIGABYTE**<sup>™</sup> H223-V10-AAW1

HPC/AI Arm Server NVIDIA Grace Hopper Superchip 2U 2-Node 8-Bay Gen5 NVMe

**User Manual** 

Rev. 1.0

#### **Copyright**

© 2024 Giga Computing Technology CO., LTD. All rights reserved. The trademarks mentioned in this manual are legally registered to their respective owners.

#### **Disclaimer**

Information in this manual is protected by copyright laws and is the property of Giga Computing. Changes to the specifications and features in this manual may be made by Giga Computing without prior notice. No part of this manual may be reproduced, copied, translated, transmitted, or published in any form or by any means without Giga Computing's prior written permission.

#### **Documentation Classifications**

In order to assist in the use of this product, Giga Computing provides the following types of documentation:

- User Manual: detailed information & steps about the installation, configuration and use of this
  product (e.g. motherboard, server barebones), covering hardware and BIOS.
- User Guide: detailed information about the installation & use of an add-on hardware or software component (e.g. BMC firmware, rail-kit) compatible with this product.
- Quick Installation Guide: a short guide with visual diagrams that you can reference easily for installation purposes of this product (e.g. motherboard, server barebones).

Please see the support section of the online product page to check the current availability of these documents.

#### For More Information

For related product specifications, the latest firmware and software, and other information please visit our website at http://www.gigabyte.com/Enterprise

For GIGABYTE distributors and resellers, additional sales & marketing materials are available from our reseller portal: http://reseller.b2b.gigabyte.com

For further technical assistance, please contact your GIGABYTE representative or visit https://esupport.gigabyte.com/ to create a new support ticket

For any general sales or marketing enquiries, you may also message GIGABYTE server directly by email: server.grp@gigabyte.com

#### Conventions

The following conventions are used in this user's guide:

NOTE! Pieces of additional information related to the current topic.	
CAUTION! Precautionary measures to avoid possible hardware or software problems.	
WARNING! Alerts to any damage that might result from doing or not doing specific actions.	

#### Server Warnings and Cautions

Before installing a server, be sure that you understand the following warnings and cautions.

#### To reduce the risk of electric shock or damage to the equipment:

- Do not disable the power cord grounding plug. The grounding plug is an important safety feature.
- Plug the power cord into a grounded (earthed) electrical outlet that is easily accessible at all times.
- · Unplug the power cord from the power supply to disconnect power to the equipment.

- · Shock Hazard! Disconnect all power supply cords before servicing.
- Do not route the power cord where it can be walked on or pinched by items placed against it. Pay particular attention to the plug, electrical outlet, and the point where the cord extends from the server.
- Do not route the power cord where it can be walked on or pinched by items placed against it. Pay particular attention to the plug, electrical outlet, and the point where the cord extends from the server.

To reduce the risk of personal injury from hot surfaces, allow the drives and the internal system components to cool before touching them.

This server is equipped with high speed fans. Keep away from hazardous moving fan blades during servicing.

This equipment is intended to be used in Restrict Access Location. The access can only be gained by Skilled person. Only authorized by well trained professional person can access the restrict access location.

This equipment is not intended for use by children.

- Do not operate the server for long periods with the access panel open or removed. Operating the server in this manner results in improper airflow and improper cooling that can lead to thermal damage.
- Danger of explosion if battery is incorrectly replaced.
- · Replace only with the same or equivalent type recommended by the manufacturer.
- · Dispose of used batteries according to the manufacturer's instructions.

Risk of explosion if battery is replaced incorrectly or with an incorrect type. Replace the battery only with the same or equivalent type recommended by the manufacturer. Dispose of used batteries according to the manufacturer's instructions.

#### Warning Stability hazard

The slide-rail may tip over causing serious personal injury

- · Before extending the rack to its installation position, read the installation instructions.
- Do not put any load on the slide-rail mounted equipment in the installation position.
- · Do not leave the slide-rail mounted equipment in the installation position.

ESD CAN DAMAGE DRIVES, BOARDS, AND OTHER PARTS. WE RECOMMEND THAT YOU PERFORM ALL PROCEDURES AT AN ESD WORKSTATION. IF ONE IS NOT AVAILABLE, PROVIDE SOME ESD PROTECTION BY WEARING AN ANTI-STATIC WRIST STRAP AT-TACHED TO CHASSIS GROUND -- ANY UNPAINTED METAL SURFACE -- ON YOUR SERVER WHEN HANDLING PARTS.

Always handle boards carefully, they can be extremely sensitive to ESD. Hold boards only by their edges without touching any components or connectors. After removing a board from its protective ESD bag or from the system, place the board component side up on a grounded, static free surface. Use a conductive foam pad if available but not the ESD bag. Do not slide the board over any surface.

System power on/off: To service components within the server, please ensure the power has been disconnected.

e.g. Remove the node from the server chassis (to disconnect power) or disconnect the power from the server chassis.

Make sure the system is removed from the rack before opening the chassis, adding, or removing any non hot-plug components.

Hazardous conditions, devices and cables: Hazardous electrical conditions may be present on power, telephone, and communication cables. Turn off the system chassis and disconnect the cables attached to the system before servicing the chassis. Otherwise, personal injury or equipment damage can result.

**Electrostatic discharge (ESD) and ESD protection:** ESD can damage drives, boards, and other parts. We recommend that you perform all procedures in this chapter only at an ESD work-station. If one is not available, provide some ESD protection by wearing an antistatic wrist strap attached to chassis ground (any unpainted metal surface on the server) when handling parts.

**ESD** and handling boards: Always handle boards carefully. They can be extremely sensi-tive to electrostatic discharge (ESD). Hold boards only by their edges. After removing a board from its protective wrapper or from the system, place the board component side up on a grounded, static free surface. Use a conductive foam pad if available but not the board wrapper. Do not slide board over any surface.

**Installing or removing jumpers:** A jumper is a small plastic encased conductor that slips over two jumper pins. Some jumpers have a small tab on top that can be gripped with fin-gertips or with a pair of fine needle nosed pliers. If the jumpers do not have such a tab, take care when using needle nosed pliers to remove or install a jumper; grip the narrow sides of the jumper with the pliers, never the wide sides. Gripping the wide sides can dam-age the contacts inside the jumper, causing intermittent problems with the function con-trolled by that jumper. Take care to grip with, but not squeeze, the pliers or other tool used to remove a jumper, or the pins on the board may bend or break.

## Chapter 1 Hardware Installation

### 1-1 Installation Precautions

The motherboard/system contain numerous delicate electronic circuits and components which can become damaged as a result of electrostatic discharge (ESD). Prior to installation, carefully read the user manual and follow these procedures:

- Prior to installation, do not remove or break motherboard S/N (Serial Number) sticker or warranty sticker provided by your dealer. These stickers are required for warranty validation.
- Always remove the AC power by unplugging the power cord from the power outlet before installing or removing the motherboard or other hardware components.
- When connecting hardware components to the internal connectors on the motherboard, make sure they are connected tightly and securely.
- When handling the motherboard, avoid touching any metal leads or connectors.
- It is best to wear an electrostatic discharge (ESD) wrist strap when handling electronic components such as a motherboard, CPU or memory. If you do not have an ESD wrist strap, keep your hands dry and first touch a metal object to eliminate static electricity.
- Prior to installing the motherboard, please have it on top of an antistatic pad or within an electrostatic shielding container.
- Before unplugging the power supply cable from the motherboard, make sure the power supply has been turned off.
- Before turning on the power, make sure the power supply voltage has been set according to the local voltage standard.
- Before using the product, please verify that all cables and power connectors of your hardware components are connected.
- To prevent damage to the motherboard, do not allow screws to come in contact with the motherboard circuit or its components.
- Make sure there are no leftover screws or metal components placed on the motherboard or within the computer casing.
- Do not place the computer system on an uneven surface.
- Do not place the computer system in a high-temperature environment.
- Turning on the computer power during the installation process can lead to damage to system components as well as physical harm to the user.
- If you are uncertain about any installation steps or have a problem related to the use of the product, please consult a certified computer technician.

#### Product Specifications 1-2

We reserve the right to make any changes to the product specifications and product-related information without prior notice.

	•						
System	2U 2-Node - Rear access						
Dimension	<ul> <li>440 (W) x 87.5 (H) x 850 (D) mm</li> </ul>						
Superchip	Per Node:						
	NVIDIA GH200 Grace Hopper Superchip:						
	<ul> <li>1 x NVIDIA Grace™ CPU</li> </ul>						
	1 x NVIDIA Hopper™ GPU						
	Connected with NVIDIA® NVLink®-C2C						
	<ul> <li>TDP up to 1000W (CPU + GPU + memory)</li> </ul>						
Memory	Per Node:						
	NVIDIAGrace CPU:						
	480GB of LPDDR5X memory with ECC						
	Memory bandwidth up to 512GB/s						
	NVIDIA Hopper GPU:						
	• 96GB HBM3 印						
	Memory bandwidth up to 4TB/s <sup>[1]</sup>						
	[1] Modules with 144GB of HBM3e GPU memory and 4.9TB/s memory bandwidth are						
	also available. Please contact our sales representatives for more details.						
	Rear:						
	4 x 10Gb/s LAN (2 x Intel® X550-AT2)						
	Support NCSI function						
	• 2 x 10/100/1000 Mbps Management LAN						
	1 x CMC Management LAN						
Video	<ul> <li>Integrated in ASPEED® AST2600 x 2</li> </ul>

## 1-3 System Block Diagram

Please Go to Chapter 4 Motherboard Components for Riser Slot information.

## Chapter 2 System Appearance

## 2-1 Front View

No.	Decription
1.	Front Panel LEDs and buttons

2-2 Rear View

No.	Decription
1.	Full-Height Dual Slot
2.	Full-Height Single Slot
3.	Mini DP Port
4.	2 x USB 3.2 Gen1
5.	2 x 1GbE LAN Port
6.	BMC Server Management LAN Port
7.	OCP 3.0 Slot (SFF Type)
8.	CMC LAN Port

## 2-3 Front Panel LED and Buttons

No.	Name	Color	Status	Description	
		Green	Solid On	System is operating normally.	
1.	System Status LED	Amber	Solid On	Critical condition, may indicate: System fan failure System temperature	
			Blink	Non-critical condition, may indicate: Redundant power module failure Temperature and voltage issue Chassis intrusion	
		N/A	Off	System is not ready, may indicate: POST error NMI error Processor or terminator missing	
2.	Reset Button			Press this button to reset the system.	
		Green	On	System is powered on	
	Power button	Green	Blink	System is in ACPI S1 state (sleep mode)	
3.	with LED	N/A	Off	System is not powered on or in ACPI S5 state (power off)     System is in ACPI S4 state (kikernate mode)	
	ID Dutter	Blue	On	System identification is active	
4.	with LED	N/A	Off	System identification is disabled.	
		Green	On	System is operating normally.	
5.	Enclosure	Amber	On	Critical condition, may indicates: Power module failure System fan failure Power supply voltage issue	
			Blink	System temperature Non-critical condition, may indicates: Redundant power module failure Temperature and voltage issue	
6.	CMC Reset Button			Press this button to reset the CMC.	

## 2-4 Rear System LAN LEDs

No.	Name	Color	Status	Description
	1015	Yellow	On	1Gbps data rate
1.	1GDE Speed I ED	Green	Green On 100 Mbps data rate	
	Opeed LLD	N/A	Off	10 Mbps data rate
	1015		On	Link between system and
2	IGDE	Green		network or no access
۷.	Activity LED		Blink	Data transmission or receiving is occurring
		N/A	Off	No data transmission or receiving is occurring
	1065	Yellow	On	10Gbps data rate
3.	Speed LED	Green	On	1Gbps data rate
		N/A	Off	100 Mbps data rate
4	10hE		On	Link between system and
	link/	Green		network or no access
4.	Activity LED		Blink	Data transmission or receiving is occurring
		N/A	Off	No data transmission or receiving is occurring

## 2-5 Power Supply Unit LED

State	Description	
OFF	No AC power to all power supplies	
1Hz Green Blinking	AC present / only standby on / Cold redundant mode	
2Hz Green Blinking	Power supply firmware updateing mode	
Archar	AC cord unplugged or AC power lost; with a second power supply in parallel still with AC input power	
Amber	Power supply critical event causing shut down: failure, OCP, OVP, fan failure and UVP	
1Hz Amber Blinking	Power supply warning events where the power supply continues to operate: high temp, high power, high current and slow fan	

## 2-6 Hard Disk Drive LEDs

LED #1	HDD Present	HDD Access	No HDD
Green	ON	BLINK (*1)	OFF

LED #2	HDD Locate	Fault
Green	BLINK (*1)	OFF
Yellow	OFF	ON

#### NOTE:

\*1: Blink cycle depends on HDD's activity signal.

## Chapter 3 System Hardware Installation

Pre-installation Instructions

Computer components and electronic circuit boards can be damaged electrostatic discharge. Working on computers that are still connected to a power supply can be extremely dangerous. Follow the simple guidelines below to avoid damage to your computer or injury to yourself.

- Always disconnect the computer from the power outlet whenever you are working inside the computer case.
- If possible, wear a grounded wrist strap when you are working inside the computer case. Alternatively, discharge any static electricity by touching the bare metal system of the computer case, or the bare metal body of any other grounded appliance.
- Hold electronic circuit boards by the edges only. Do not touch the components on the board
   unless it is necessary to do so. Do not flex or stress the circuit board.
- Leave all components inside the static-proof packaging until you are ready to use the component for the installation.

## 3-1 Installing the Hard Disk Drive

Read the following guidelines before you begin to install the Hard disk drive:

- Take note of the drive tray orientation before sliding it out.
- · The tray will not fit back into the bay if inserted incorrectly.
- Make sure that the HDD is connected to the HDD connector on the backplane.

#### Follow these instructions to install the Hard disk drive:

- 1. Press the release button.
- 2. Extend the locking lever.
- 3. Pull the locking lever to remove the HDD tray.
- 4. Align the hard disk drive with the positioning stud on the HDD tray.
- 5. Slide hard disk drive into the blank HDD tray.
- 6. Reinsert the HDD tray into the slot and close the locking lever.

## 3-2 Removing the Node

•

Read the following guidelines before you begin to replace a node:

To make sure the system operates normally, please power off only the node that will be replaced or reconfigured.

#### Follow these instructions to remove a node:

- 1. Press the release latch while simultaneously pushing down the tray handle for the node.
- 2. Pull the node out of the system.
- 3. To install the node, push the node back into the system.

## 3-3 Removing Chassis Cover

Before you remove or install the system cover

Make sure the system is not turned on or connected to AC power.

#### Follow these instructions to remove the system cover:

- 1. Loosen and remove the six screws securing the back cover.
- 2. Slide the cover to the rear of the system and remove the cover in the direction of the arrow.

## 3-4 Installing the PCI Expansion Card

The PCI riser assembly does not include a riser card or any cabling as standard. To install a PCI card, a riser card must be installed.

#### Follow these instructions to install the PCI Expansion card:

- 1. Remove the screw on the riser bracket.
- 2. Remove the three screws at the two side of the compute node.
- 3. Lift up the riser bracket and the coolant pipe bracket out of compute node.
- 4. Remove the screw securing the side bracket to the riser bracket.
- 5. Align the PCIe card to the riser guide slot and push in the direction of the arrow until the PCI-E card sits in the PCI card connector.
- 6. Secure the PCIe card with a screw.
- 7. Secure the side bracket to the riser bracket with a screw.
- 8. Reverse steps 1 4 to install the riser bracket and the coolant pipe bracket back into the system.

## 3-5 Installing the Mezzanine Card

#### 3-5-1 Installing the OCP 3.0 Mezzanine Card

Use of the following type of OCP 3.0 NIC is recommended:

- OCP 3.0 SFF with pull tab
- · OCP 3.0 SFF with ejector latch

#### Follow these instructions to install an OCP 3.0 Mezzanine card:

- 1. Remove the one screw securing the OCP 3.0 card slot cover.
- 2. Remove the slot cover from the system.
- Insert the OCP 3.0 card into the card slot ensuring that the card is firmly connected to the connector on the motherboard.
- 4. Tighten the thumbnail screw to secure the OCP 3.0 card in place.
- 5. Reverse steps 3-4 to replace the OCP 3.0 card.

## 3-6 Replacing the Fan Assembly

Voltages can be present within the server whenever an AC power source is connected. This voltage is present even when the main power switch is in the off position. Ensure that the system is powered-down and all power sources have been disconnected from the server prior to replacing a system fan.

Failure to observe these warnings could result in personal injury or damage to equipment.

Follow these instructions to replace the fan assembly:

- 1. Lift up the fan assembly from the chassis.
- 2. Reverse the previous steps to install the replacement fan assembly.

## 3-7 Replacing the Power Supply

Follow these instructions to replace the power supply:

- 1. Pull up the power supply handle and press the retaining clip on the right side of the power supply along the direction of the arrow. At the same time, pull out the power supply by using its handle.
- 2. Insert the replacement power supply firmly into the chassis. Connect the AC power cord to the replacement power supply.

## 3-8 Installing the M.2 Device

#### Follow these instructions to install the M.2 device:

- 1. Remove the screws securing the M.2 riser.
- 2. Remove the M.2 riser from the system.
- 3. Insert the M.2 SSD module into the slot.
- 4. Secure it with the screw, tightening as necessary to fasten the M.2 SSD module in place.

# Chapter 5 BIOS Setup

BIOS (Basic Input and Output System) records hardware parameters of the system in the EFI on the motherboard. Its major functions include conducting the Power-On Self-Test (POST) during system startup, saving system parameters, loading the operating system etc. The BIOS includes a BIOS Setup program that allows the user to modify basic system configuration settings or to activate certain system features. When the power is turned off, the battery on the motherboard supplies the necessary power to the CMOS to keep the configuration values in the CMOS.

To access the BIOS Setup program, press the <DEL> key during the POST when the power is turned on.

- BIOS flashing is potentially risky, if you do not encounter any problems when using the current BIOS version, it is recommended that you don't flash the BIOS. To flash the BIOS, do it with caution. Inadequate BIOS flashing may result in system malfunction.
- It is recommended that you not alter the default settings (unless you need to) to prevent system
  instability or other unexpected results. Inadequately altering the settings may result in system's
  failure to boot. If this occurs, try to clear the CMOS values and reset the board to default values.
  (Refer to the Exit section in this chapter or introductions of the battery/clearing CMOS jumper in
  Chapter 4 for how to clear the CMOS values.)

#### **BIOS Setup Program Function Keys**

<	←><→>	Move the selection bar to select the screen
<	<b>↑&gt;&lt;↓&gt;</b>	Move the selection bar to select an item
<	+>	Increase the numeric value or make changes
<.	->	Decrease the numeric value or make changes
<	Enter>	Execute command or enter the submenu
<	Esc>	Main Menu: Exit the BIOS Setup program
		Submenus: Exit current submenu
<	F1>	Show descriptions of general help
<	F3>	Restore the previous BIOS settings for the current submenus
<	F9>	Load the Optimized BIOS default settings for the current submenus
<	F10>	Save all the changes and exit the BIOS Setup program

#### Main

This setup page includes all the items of the standard compatible BIOS.

#### Advanced

This setup page includes all the items of AMI BIOS special enhanced features.

(ex: Auto detect fan and temperature status, automatically configure hard disk parameters.)

#### Chipset

This setup page includes all the submenu options for configuring the functions of the Platform Controller Hub.

#### Server Management

Server additional features enabled/disabled setup menus.

#### Security

Change, set, or disable supervisor and user password. Configuration supervisor password allows you to restrict access to the system and BIOS Setup.

A supervisor password allows you to make changes in BIOS Setup.

A user password only allows you to view the BIOS settings but not to make changes.

#### Boot

This setup page provides items for configuration of the boot sequence.

#### Save & Exit

Save all the changes made in the BIOS Setup program to the CMOS and exit BIOS Setup. (Pressing <F10> can also carry out this task.)

Abandon all changes and the previous settings remain in effect. Pressing <Y> to the confirmation message will exit BIOS Setup. (Pressing <Esc> can also carry out this task.)

# 5-1 The Main Menu

Once you enter the BIOS Setup program, the Main Menu (as shown below) appears on the screen. Use arrow keys to move among the items and press <Enter> to accept or enter other sub-menu.

#### Main Menu Help

The on-screen description of a highlighted setup option is displayed on the bottom line of the Main Menu.

#### Submenu Help

While in a submenu, press <F1> to display a help screen (General Help) of function keys available for the menu. Press <Esc> to exit the help screen. Help for each item is in the Item Help block on the right side of the submenu.

When the system is not stable as usual, select the **Restore Defaults** item to set your system to its defaults.

The BIOS Setup menus described in this chapter are for reference only and may differ by BIOS version.

Parameter	Description
BIOS Information	
Access Level	Displays the current access level depending on the type of password protection used. (If no password is set, the default will display as Administrator.) The Administrator level allows you to make changes to all BIOS settings; the User level only allows you to make changes to certain BIOS settings but not all.
System Product Name	Displays the system product name information.
Project Name	Displays the project name information.
Project Version	Displays version number of the BIOS setup utility.
Build Date and Time	Displays the date and time when the BIOS setup utility was created.
BMC Information <sup>(Note1)</sup>	
BMC Firmware Version <sup>(Note1)</sup>	Displays BMC firmware version information.
BMC IP	Displays BMC IP information.

(Note1) Functions available on selected models.

(Note2) This section will display capacity and frequency information of the memory that the customer has installed.

Processor Information		
CPU Brand String/ Max CPU Speed	Displays the technical information for the installed processor(s).	
Memory Information(Note2)		
Total Memory	Displays the total memory size of the installed memory.	
Memory Frequency	Displays the installed memory frequency information.	
Memory Slot Information	Press [Enter] for advanced items.	
Memory Frequency	Displays the frequency information of the installed memory.	
System Language	Press [Enter] to select preferred language.	
Platform Information	Press [Enter] for advanced items.	
System Date	Sets the date following the weekday-month-day-year format.	
System Time	Sets the system time following the hour-minute-second format.	

(Note2) This section will display capacity and frequency information of the memory that the customer has installed.

# 5-2 Advanced Menu

The Advanced Menu displays submenu options for configuring the function of various hardware components. Select a submenu item, then press <Enter> to access the related submenu screen.

Version 2	.22.1289 Copyright (C) 2024 AMI	

Parameter	Description
BMC network configuration	
Select NCSI and Dedicated LAN	Options available: Do Nothing, Model1(Dedicated), Model2(NCSI), Mode3(Failover). Default setting is <b>Do Nothing</b> .
Lan Channel 1	
Configuration Address source	Selects to configure LAN channel parameters statically or dynamically (DHCP). Options available: Unspecified, Static, DynamicBmcDhcp. Default setting is <b>DynamicBmcDhcp</b> .
Station IP address	Displays IP Address information.
Subnet mask	Displays Subnet Mask information. Please note that the IP address must be in three digitals, for example, 192.168.000.001.
Router IP address	Displays the Router IP Address information.
Station MAC address	Displays the MAC Address information.
Real-time get BMC network address	Press [Enter] will set LAN mode and Address source and then get IP, Subnet, Gateway and MAC address.

#### 5-4-6 IPv6 BMC Network Configuration

Parameter	Description
IPv6 BMC network configuration	
IPv6 BMC Lan Channel 1	
IPv6 BMC Lan Option	Enable/Disable IPv6 BMC LAN channel function. When this item is disabled, the system will not modify any BMC network during BIOS phase. Options available: Unspecified, Disable, Enable. Default setting is Enable.
IPv6 BMC Lan IP Address Source	Selects to configure LAN channel parameters statically or dynamically (by BIOS or BMC). Options available: Unspecified, Static, Dynamic-Obtained by BMC running DHCP. Default setting is <b>Dynamic-Obtained by BMC running DHCP</b> .
IPv6 BMC Lan IP Address/ Prefix Length	Check if the IPv6 BMC LAN IP address matches those displayed on the screen.

## 5-5 Security Menu

The Security menu allows you to safeguard and protect the system from unauthorized use by setting up access passwords.

	Main Advanced Chipset Server Mgm	Aptio Setup – AMI nt <mark>Security</mark> Boot Save & Exit	
Γ	Password Description		Set Administrator Password
	If ONLY the Administrator's password then this only limits access to Setu- only asked for when entering Setup. If ONLY the User's password is set, is a power on password and must be a boot or enter Setup. In Setup the Us have Administrator rights. The password length must be in the following caree:	is set, p and is then this ntered to er will	
L	Minimum length	3	
L	Maximum length	20	
L			++: Select Screen
	Haministrator Password User Password		<ul> <li>First Select (rem)</li> <li>Enter: Select</li> <li>+/-: Change Opt.</li> <li>F1: General Help</li> <li>F3: Previous Values</li> <li>F9: Optimized Defaults</li> <li>F10: Save &amp; Exit</li> </ul>
	HDD Security Configuration: SAMSUNG MZVEV128HDGM-00000		ESC: Exit
	Version 5	22 1289 Conuright (C) 2024 AMT	

There are two types of passwords that you can set:

Administrator Password

Entering this password will allow the user to access and change all settings in the Setup Utility.

User Password

Entering this password will restrict a user's access to the Setup menus. To enable or disable this field, a Administrator Password must first be set. A user can only access and modify the System Time, System Date, and Set User Password fields.

Parameter	Description
Administrator Password	Press [Enter] to configure the administrator password.
User Password	Press [Enter] to configure the user password.
Secure Boot	Press [Enter] to configure advanced items.

## 5-6 Boot Menu

The Boot menu allows you to set the drive priority during system boot-up. BIOS setup will display an error message if the legacy drive(s) specified is not bootable.

	Main Advanced Chipset Server Mgm	Aptio Setup – AMI t Security <mark>Boot</mark> Save & Exit	
	Boot Configuration Setup Prompt Timeout Bootup NumLock State Quiet Boot	1 [On] [Enabled]	Number of seconds to wait for setup activation key. 65535(0xFFFF) means indefinite waiting.
	Endless Retry Boot Fast Boot	[Disabled] [Disable Link]	
	FIXED BOOT ORDER Priorities Boot Option #1	[Hard Disk:ubuntu (SAMSUNG

Parameter	Description
Default Options	
Restore Defaults	Loads the default settings for all BIOS setup parameters. Setup Defaults are quite demanding in terms of resources consumption. If you are using low-speed memory chips or other kinds of low-performance components and you choose to load these settings, the system might not function properly. Options available: Yes, No.
Save the User Default Values	Saves the changes made as the user default settings. Options available: Yes, No.
Restore the User Default Values	Loads the user default settings for all BIOS setup parameters. Options available: Yes, No.
Boot Device Priority	Press [Enter] to configure the device as the boot-up drive.
Launch EFI Shell	Attempts to Launch EFI Shell application (Shell.efi) from one of the available file system devices.

## 5-8 BIOS Recovery

The system has an embedded recovery technique. In the event that the BIOS becomes corrupt the boot block can be used to restore the BIOS to a working state. To restore your BIOS, please follow the instructions listed below:

Recovery Instruction:

- 1. Copy the XXX.rom to USB diskette.
- 2. Setting BIOS Recovery jump to enabled status.
- 3. Boot into BIOS recovery.
- 4. Run Proceed with flash update.
- 5. BIOS updated.
