Disclaimer

Information in this manual is protected by copyright laws and is the property of GIGABYTE. Changes to the specifications and features in this manual may be made by GIGABYTE without prior notice. No part of this manual may be reproduced, copied, translated, transmitted, or published in any form or by any means without GIGABYTE's prior written permission.

Documentation Classifications

In order to assist in the use of this product, GIGABYTE provides the following types of documentation:

- User Manual: detailed information & steps about the installation, configuration and use of this product (e.g. motherboard, server barebones), covering hardware and BIOS.
- User Guide: detailed information about the installation & use of an add-on hardware or software component (e.g. BMC firmware, rail-kit) compatible with this product.
- Quick Installation Guide: a short guide with visual diagrams that you can reference easily for installation purposes of this product (e.g. motherboard, server barebones).

Please see the support section of the online product page to check the current availability of these documents.

For More Information

For related product specifications, the latest firmware and software, and other information please visit our website at <http://www.gigabyte.com>

For GIGABYTE distributors and resellers, additional sales & marketing materials are available from our reseller portal: <http://reseller.b2b.gigabyte.com>

For further technical assistance, please contact your GIGABYTE representative or visit <https://esupport.gigabyte.com/> to create a new support ticket

For any general sales or marketing enquiries, you may also message GIGABYTE server directly by email: server.grp@gigabyte.com

Conventions

The following conventions are used in this user's guide:

	NOTE! Gives bits and pieces of additional information related to the current topic.
	CAUTION! Gives precautionary measures to avoid possible hardware or software problems.
	WARNING! Alerts you to any damage that might result from doing or not doing specific actions.

Server Warnings and Cautions

Before installing a server, be sure that you understand the following warnings and cautions.

WARNING!

To reduce the risk of electric shock or damage to the equipment:

- Do not disable the power cord grounding plug. The grounding plug is an important safety feature.
- Plug the power cord into a grounded (earthed) electrical outlet that is easily accessible at all times.
- Unplug the power cord from the power supply to disconnect power to the equipment.
- Do not route the power cord where it can be walked on or pinched by items placed against it. Pay particular attention to the plug, electrical outlet, and the point where the cord extends from the server.

WARNING!

To reduce the risk of personal injury from hot surfaces, allow the drives and the internal system components to cool before touching them.

WARNING!

This server is equipped with high speed fans. Keep away from hazardous moving fan blades during servicing.

WARNING!

The equipment should only be repaired, maintained or replaced by skilled personnel.

CAUTION!

- Do not operate the server for long periods with the access panel open or removed. Operating the server in this manner results in improper airflow and improper cooling that can lead to thermal damage.
- Danger of explosion if battery is incorrectly replaced.
- Replace battery with the same or equivalent type recommended by the manufacturer.
- Dispose of used batteries according to the manufacturer's instructions.

CAUTION!

Risk of explosion if battery is replaced incorrectly or with an incorrect type. Replace the battery only with the same or equivalent type recommended by the manufacturer. Dispose of used batteries according to the manufacturer's instructions.

Electrostatic Discharge (ESD)

CAUTION!

ESD CAN DAMAGE DRIVES, BOARDS, AND OTHER PARTS. WE RECOMMEND THAT YOU PERFORM ALL PROCEDURES AT AN ESD WORKSTATION. IF ONE IS NOT AVAILABLE, PROVIDE SOME ESD PROTECTION BY WEARING AN ANTI-STATIC WRIST STRAP ATTACHED TO CHASSIS GROUND -- ANY UNPAINTED METAL SURFACE -- ON YOUR SERVER WHEN HANDLING PARTS.

Always handle boards carefully. They can be extremely sensitive to ESD. Hold boards only by their edges without any component and pin touching. After removing a board from its protective wrapper or from the system, place the board component side up on a grounded, static free surface. Use a conductive foam pad if available but not the board wrapper. Do not slide board over any surface.

System power on/off: To remove power from system, you must remove the system from rack. Make sure the system is removed from the rack before opening the chassis, adding, or removing any non hot-plug components.

Hazardous conditions, devices and cables: Hazardous electrical conditions may be present on power, telephone, and communication cables. Turn off the system and disconnect the cables attached to the system before servicing it. Otherwise, personal injury or equipment damage can result.

Electrostatic discharge (ESD) and ESD protection: ESD can damage drives, boards, and other parts. We recommend that you perform all procedures in this chapter only at an ESD workstation. If one is not available, provide some ESD protection by wearing an antistatic wrist strap attached to chassis ground (any unpainted metal surface on the server) when handling parts.

ESD and handling boards: Always handle boards carefully. They can be extremely sensitive to electrostatic discharge (ESD). Hold boards only by their edges. After removing a board from its protective wrapper or from the system, place the board component side up on a grounded, static free surface. Use a conductive foam pad if available but not the board wrapper. Do not slide board over any surface.

Installing or removing jumpers: A jumper is a small plastic encased conductor that slips over two jumper pins. Some jumpers have a small tab on top that can be gripped with fingertips or with a pair of fine needle nosed pliers. If the jumpers do not have such a tab, take care when using needle nosed pliers to remove or install a jumper; grip the narrow sides of the jumper with the pliers, never the wide sides. Gripping the wide sides can damage the contacts inside the jumper, causing intermittent problems with the function controlled by that jumper. Take care to grip with, but not squeeze, the pliers or other tool used to remove a jumper, or the pins on the board may bend or break.

Chapter 1 Hardware Installation

1-1 Installation Precautions

The motherboard/system contain numerous delicate electronic circuits and components which can become damaged as a result of electrostatic discharge (ESD). Prior to installation, carefully read the user manual and follow these procedures:

- Prior to installation, do not remove or break motherboard S/N (Serial Number) sticker or warranty sticker provided by your dealer. These stickers are required for warranty validation.
- Always remove the AC power by unplugging the power cord from the power outlet before installing or removing the motherboard or other hardware components.
- When connecting hardware components to the internal connectors on the motherboard, make sure they are connected tightly and securely.
- When handling the motherboard, avoid touching any metal leads or connectors.
- It is best to wear an electrostatic discharge (ESD) wrist strap when handling electronic components such as a motherboard, CPU or memory. If you do not have an ESD wrist strap, keep your hands dry and first touch a metal object to eliminate static electricity.
- Prior to installing the motherboard, please have it on top of an antistatic pad or within an electrostatic shielding container.
- Before unplugging the power supply cable from the motherboard, make sure the power supply has been turned off.
- Before turning on the power, make sure the power supply voltage has been set according to the local voltage standard.
- Before using the product, please verify that all cables and power connectors of your hardware components are connected.
- To prevent damage to the motherboard, do not allow screws to come in contact with the motherboard circuit or its components.
- Make sure there are no leftover screws or metal components placed on the motherboard or within the computer casing.
- Do not place the computer system on an uneven surface.
- Do not place the computer system in a high-temperature environment.
- Turning on the computer power during the installation process can lead to damage to system components as well as physical harm to the user.
- If you are uncertain about any installation steps or have a problem related to the use of the product, please consult a certified computer technician.

1-2 Product Specifications

NOTE:

We reserve the right to make any changes to the product specifications and product-related information without prior notice.

	System Dimension	<ul style="list-style-type: none"> ◆ 2U 4-Node - Rear access ◆ 440 (W) x 87.5 (H) x 877(D) mm
	CPU	<ul style="list-style-type: none"> ◆ AMD EPYC™ 9005 Series Processors ◆ AMD EPYC™ 9004 Series Processors ◆ Dual processor per node, cTDP up to 240W
<p>NOTE: If only 1 CPU is installed, some PCIe or memory functions might be unavailable</p>		
	Socket	<ul style="list-style-type: none"> ◆ 8 x LGA 6096 ◆ Socket SP5

	Security Modules	<ul style="list-style-type: none"> ◆ 1 x TPM header with SPI interface ◆ Optional TPM2.0 kit: CTM010

Power Supply

H273-Z80-AAN1

- ◆ Dual 2600W 80 PLUS Titanium redundant power supply^[1]
- ◆ AC Input: 100-240V

[1] The system power supply requires C19 power cord.

H273-Z80-AAW1

- ◆ Dual 3000W 80 PLUS Titanium redundant power supply^[1]
- ◆ AC Input: 100-240V

[1] The system power supply requires C19 power cord.

System Management

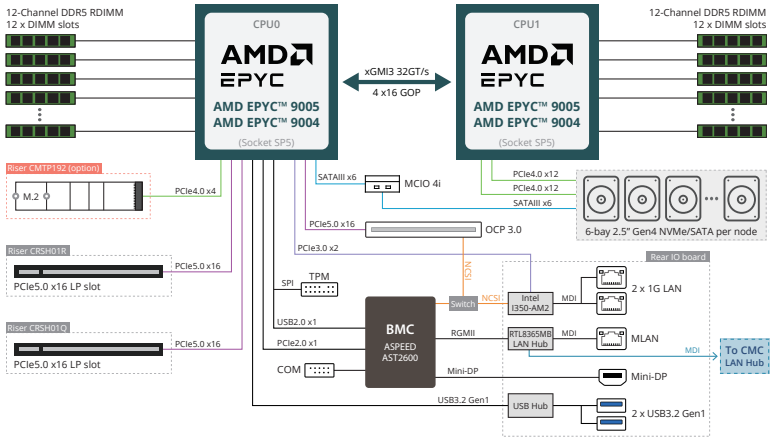

- ◆ Aspeed® AST2600 Baseboard Management Controller
- ◆ Aspeed® AST2520 Chassis Management Controller
- ◆ GIGABYTE Management Console web interface
- ◆ Dashboard
- ◆ HTML5 KVM
- ◆ Sensor Monitor (Voltage, RPM, Temperature, CPU Status ...etc.)
- ◆ Sensor Reading History Data
- ◆ FRU Information
- ◆ SEL Log in Linear Storage / Circular Storage Policy
- ◆ Hardware Inventory
- ◆ Fan Profile
- ◆ System Firewall
- ◆ Power Consumption
- ◆ Power Control
- ◆ LDAP / AD / RADIUS Support
- ◆ Backup & Restore Configuration
- ◆ Remote BIOS/BMC/CPLD Update
- ◆ Event Log Filter
- ◆ User Management
- ◆ Media Redirection Settings
- ◆ PAM Order Settings
- ◆ SSL Settings
- ◆ SMTP Settings

Operating Properties

- ◆ Operating temperature: 10°C to 30°C
- ◆ Operating humidity: 8-80% (non-condensing)
- ◆ Non-operating temperature: -40°C to 60°C
- ◆ Non-operating humidity: 20%-95% (non-condensing)

1-3 System Block Diagram

• Please Go to Chapter 4 Motherboard Components for Riser Slot information.

1-4 CMC Hub Integrated Architecture

The CMC function can be accessed through any of the management LAN ports. Please set up the connection by using only one port on the server to connect to the switch. For examples of LAN configurations, please refer to Chapter 1-5.

1-5 Multiplexing Management Topology

Multiplexing Management Example

Spanning Tree Protocol (STP) must be enabled in LAN switch function if using ring topology.

LAN Switch and Compute Node Connection Example

Correct

Incorrect

Chapter 2 System Appearance

2-1 Front View

No.	Description
1.	Front Panel LEDs and buttons
NOTE! Drives with green latches support NVMe.	

- Please Go to Chapter 2-3 Front Panel LED and Buttons for detail description of function LEDs.

2-2 Rear View

No.	Description
1.	PCIe Slot
2.	Node System Status LED
3.	Mini DP Port
4.	2 x USB 3.2 Gen1
5.	GbE LAN Port x 2
6.	BMC Server Management LAN Port
7.	OCP 3.0 Slot (SFF Type)
8.	PCIe Slot

2-3 Front Panel LED and Buttons

No.	Name	Color	Status	Description
1.	System Status LED ^(Note)			This LED represents the RoT function LED behavior. Please see the following section for detail LED behavior.
2.	Reset Button	--	--	Press this button to reset the system.
3.	Power button with LED	Green	On	System is powered on
		Green	Blink	System is in ACPI S1 state (sleep mode)
		N/A	Off	<ul style="list-style-type: none"> System is not powered on or in ACPI S5 state (power off) System is in ACPI S4 state (hibernate mode)
4.	ID Button with LED ^(Note)			This LED represents the RoT function LED behavior. Please see the following section for detail LED behavior.
5.	Enclosure	Green	On	System is operating normally.
		Amber	On	Critical condition, may indicates: Power module failure System fan failure Power supply voltage issue System temperature
			Blink	Non-critical condition, may indicates: Redundant power module failure Temperature and voltage issue
6.	CMC Reset Button	--	--	Press this button to reset the CMC.

(Note) If your server features RoT function, please see the following section for detail LED behavior.

2-4 RoT LEDs

LED on Front panel ^(Note5)		
	ID LED	Status LED
EC Firmware (FW) Authentication fail or not exit		
EC FW is broken or not exit ^(Note1)	OFF	OFF
Authenticating/Recovering BMC/BIOS Images		
Authenticating Images	OFF	OFF
Recovering BMC Active Flash	Blinks Blue 4 times per second	Blinks Green 4 times per second
Recovering BIOS Active Flash	Blinks Blue 4 times per second	Blinks Amber 4 times per second
Authentication (AUTH) Pass		
Recovering BIOS Active Flash	OFF	OFF
BMC : AUTH pass after doing recovery	OFF	OFF
BIOS : AUTH pass after doing recovery	OFF	OFF
BMC : AUTH pass after doing recovery	OFF	OFF
BIOS : AUTH pass	OFF	OFF
BMC : AUTH pass	OFF	OFF
BIOS : AUTH pass after doing recovery	OFF	OFF
Active Flash Authentication (AUTH) Fail		
BMC : AUTH Fail ^(Note2)	Blinks Blue 1 time per second	Blinks Green 1 time per second
BIOS : AUTH fail ^(Note2)	Blinks Blue 1 time per second	Blinks Amber 1 time per second

BMC : AUTH fail after doing recovery ^(Note3)	Blinks Blue 2 times per second [ON OFF OFF]	Blinks Green 2 times per second [ON OFF OFF]
BIOS : AUTH fail after doing recovery ^(Note3)	Blinks Blue 2 times per second [ON OFF OFF]	Blinks Amber 2 times per second [ON OFF OFF]
Backup Flash Authentication Fail ^(Note4)		
BMC : AUTH fail	Blinks Blue 2 times per second [ON OFF ON OFF]	Blinks Green 2 times per second [ON OFF ON OFF]
BIOS : AUTH fail	Blinks Blue 2 times per second [ON OFF ON OFF]	Blinks Amber 2 times per second [ON OFF ON OFF]

NOTE!

- EC FW is broken or not exited result in Microchip CEC1702 cannot load EC FW for authentication.
- (1) Authentication fail include below scenarios
Configuration table is missing or modified
Public key is missing or modified
Protected area or signature is modified
Flash empty
- if active flash is still authentication failed after recovery sequence, Microchip CEC1702 stop the process and showing LED behavior.
- If backup flash authentication is failed cause by configuration table, public key or protected area is broken. Microchip CEC1702 stop the process and showing LED behavior.
- Front panel LED is controlled by BMC or Microchip CEC1702. Once Microchip CEC1702 is working(Auth or recovery), the front panel LED is controlled by Microchip CEC1702 and vice versa.

2-5 Rear System LAN LEDs

No.	Name	Color	Status	Description
1.	1GbE Speed LED	Yellow	On	1Gbps data rate
		Green	On	100 Mbps data rate
		N/A	Off	10 Mbps data rate
2.	1GbE Link/Activity LED	Green	On	Link between system and network or no access
			Blink	Data transmission or receiving is occurring
		N/A	Off	No data transmission or receiving is occurring

2-6 Power Supply Unit LED

State	Description
OFF	No AC power to all power supplies
1Hz Green Blinking	AC present / only standby on / Cold redundant mode
2Hz Green Blinking	Power supply firmware update mode
Amber	AC cord unplugged or AC power lost; with a second power supply in parallel still with AC input power
	Power supply critical event causing shut down: failure, OCP, OVP, fan failure and UVP
1Hz Amber Blinking	Power supply warning events where the power supply continues to operate: high temp, high power, high current and slow fan

2-7 Hard Disk Drive LEDs

RAID SKU		LED1	Locate	HDD Fault	Rebuilding	HDD Access	HDD Present (No Access)
No RAID configuration (via HBA)	Disk LED (LED on Back Panel)	Green	ON(*1)	OFF		BLINK (*2)	OFF
		Amber	OFF	OFF		OFF	OFF
	Removed HDD Slot (LED on Back Panel)	Green	ON(*1)	OFF		--	--
		Amber	OFF	OFF		--	--
RAID configuration (via HW RAID Card or SW RAID Card)	Disk LED	Green	ON	OFF		BLINK (*2)	OFF
		Amber	OFF	ON	(Low Speed: 2 Hz)	OFF	OFF
	Removed HDD Slot	Green	ON(*1)	OFF	(*3)	--	--
		Amber	OFF	ON	(*3)	--	--

LED 2	HDD Present	No HDD
Green	ON	OFF

NOTE:

*1: Depends on HBA/Utility Spec.

*2: Blink cycle depends on HDD's activity signal.

*3: If HDD is pulled out during rebuilding, the disk status of this HDD is regarded as faulty.

Chapter 3 System Hardware Installation

Pre-installation Instructions

Computer components and electronic circuit boards can be damaged electrostatic discharge. Working on computers that are still connected to a power supply can be extremely dangerous. Follow the simple guidelines below to avoid damage to your computer or injury to yourself.

- Always disconnect the computer from the power outlet whenever you are working inside the computer case.
- If possible, wear a grounded wrist strap when you are working inside the computer case. Alternatively, discharge any static electricity by touching the bare metal system of the computer case, or the bare metal body of any other grounded appliance.
- Hold electronic circuit boards by the edges only. Do not touch the components on the board unless it is necessary to do so. Do not flex or stress the circuit board.
- Leave all components inside the static-proof packaging until you are ready to use the component for the installation.

3-1 Installing the Hard Disk Drive

Read the following guidelines before you begin to install the Hard disk drive:

- Take note of the drive tray orientation before sliding it out.
- The tray will not fit back into the bay if inserted incorrectly.
- Make sure that the HDD is connected to the HDD connector on the backplane.

Follow these instructions to install the Hard disk drive:

1. Press the release button.
2. Extend the locking lever.
3. Pull the locking lever to remove the HDD tray.
4. Align the hard disk drive with the positioning stud on the HDD tray.
5. Slide hard disk drive into the blank HDD tray.
6. Reinsert the HDD tray into the slot and close the locking lever.

3-2 Removing the Node

Read the following guidelines before you begin to replace a node:

- To make sure the system operates normally, please power off only the node that will be replaced or reconfigured.

Follow these instructions to remove a node:

1. Press the release latch while simultaneously pushing down the tray handle for the node.
2. Pull the node out of the system.
3. To install the node, push the node back into the system.

3-3 Removing Chassis Cover

Before you remove or install the system cover

- Make sure the system is not turned on or connected to AC power.

Follow these instructions to remove the system cover:

1. Loosen and remove the six screws securing the back cover.
2. Slide the cover to the rear of the system and remove the cover in the direction of the arrow.

3-4 How to Get the BMC Password

Follow these instructions to get the BMC Password:

1. Pull out the tab and then you can find the password information on the tab.

3-5 Removing and Installing the Fan Duct

Follow these instructions to remove/install the fan duct:

1. Remove the two screws securing the fan ducts.
2. Lift up to remove the fan ducts
3. To install the fan duct, align the fan duct with the guiding groove. Push down the fan duct into chassis until its firmly seats, then install the four screws to secure the fan ducts in place.

3-6 Removing and Installing the Heatsink

Read the following guidelines before you begin to install the heatsink:

- Always turn off the computer and unplug the power cord from the power outlet before installing the heatsink to prevent hardware damage.
- Unplug all cables from the power outlets.
- Disconnect all telecommunication cables from their ports.
- Place the system unit on a flat and stable surface.
- Open the system according to the instructions.

WARNING!

Failure to properly turn off the server before you start installing components may cause serious damage. Do not attempt the procedures described in the following sections unless you are a qualified service technician.

Follow these instructions to remove the heatsink:

1. Loosen the four captive screws securing the heatsink to the system.
2. Lift and remove the heatsink.

WARNING!

CPU0 and CPU1 use different CPU heatsinks. See the following images for using the correct heatsink.

Failure to observe the warning could result in damage to the equipment.

- Lock the CPU by using a Torx T20 screwdriver to tighten screw.
- When installing the heatsink to CPU, use a Torx T20 screwdriver to tighten 6 captive nuts in sequence as 1-6.
- The screw tightening torque: 12.5-15.0 kgf-cm.
- To ensure the system operates properly, make sure the heatsink is seated on the processor firmly.

CPU0 Heatsink:

CPU1 Heatsink:

- Lock the CPU by using a Torx T20 screwdriver to tighten screw.
- When installing the heatsink to CPU, use a Torx T20 screwdriver to tighten 6 captive nuts in sequence as 1-6.
- The screw tightening torque: 13.5 ± 0.5 kgf-cm.
- To ensure the system operates properly, make sure the heatsink is seated on the processor firmly.

To install the heatsink, reverse the steps above while ensuring that you tighten the captive screws in sequential order (1→2→3→4→5→6) as seen in the image below.

CPU0 Heatsink

CPU1 Heatsink:

3-7 Removing and Installing the CPU

Read the following guidelines before you begin to install the CPU:

- **Make sure that the motherboard supports the CPU.**
- **Always turn off the computer and unplug the power cord from the power outlet before installing the CPU to prevent hardware damage.**
- **Unplug all cables from the power outlets.**
- **Disconnect all telecommunication cables from their ports.**
- **Place the system unit on a flat and stable surface.**
- **Open the system according to the instructions.**

WARNING!

Failure to properly turn off the server before you start installing components may cause serious damage. Do not attempt the procedures described in the following sections unless you are a qualified service technician.

Follow these instructions to install the CPU:

1. Loosen the three captive screws securing the CPU cover.
2. Flip open the CPU cover.
3. Remove the CPU carrier from the CPU frame using the handle on the CPU carrier.
4. Using the handle on the CPU carrier insert the new CPU carrier with CPU installed into the CPU frame.

NOTE: Ensure the CPU is installed in the CPU carrier in the correct orientation, with the triangle on the CPU aligned to the top left corner of the CPU carrier.

5. Flip the CPU frame with CPU installed into place in the CPU socket.
6. Flip the CPU cover into place over the CPU socket.
7. Tighten the CPU cover screw to secure the CPU cover in place.
8. Repeat steps 1-7 for the second CPU.
9. To remove the CPUs, follow steps 1-7 in reverse order.

- Lock the CPU by using a Torx T20 screwdriver to tighten screw.
- When installing the heatsink to CPU, use a Torx T20 screwdriver to tighten 6 captive nuts in sequence as 1-6.
- The screw tightening torque: 13.5 ± 0.5 kgf-cm.
- To ensure the system operates properly, make sure the heatsink is seated on the processor firmly.

3-8 Installing Memory

Read the following guidelines before you begin to install the memory:

- Make sure that the motherboard supports the memory. It is recommended that memory of the same capacity, brand, speed, and chips be used.
- Always turn off the computer and unplug the power cord from the power outlet before installing the memory to prevent hardware damage.
- Memory modules have a foolproof design. A memory module can be installed in only one direction. If you are unable to insert the memory, switch the direction.

3-8-1 Twelves Channel Memory Configuration

This motherboard provides 24 DDR5 memory sockets and supports Eight Channel Technology. After the memory is installed, the BIOS will automatically detect the specifications and capacity of the memory. Enabling eight Channel memory mode will be eight times of the original memory bandwidth.

3-8-2 Installing the Memory

Before installing a memory module, make sure to turn off the computer and unplug the power cord from the power outlet to prevent damage to the memory module.

Be sure to install DDR5 DIMMs on this motherboard.

Follow these instructions to install the Memory:

1. Insert the DIMM memory module vertically into the DIMM slot, and push it down.
2. Close the plastic clip at both edges of the DIMM slots to lock the DIMM module.
3. Reverse the installation steps when you want to remove the DIMM module.

3-8-3 Processor and Memory Module Matrix Table

Memory Q'ty for each CPU	CPU0												CPU1											
	F0	E0	D0	C0	B0	A0	G0	H0	I0	J0	K0	L0	R0	Q0	P0	O0	N0	M0	S0	T0	U0	V0	W0	X0
1 DIMM						v													v					
2 DIMM						v	v												v	v				
4 DIMM				v		v	v		v								v		v	v		v		
6 DIMM				v	v	v	v	v	v								v	v	v	v	v	v		
8 DIMM		v		v	v	v	v	v	v		v			v			v	v	v	v	v	v	v	v
10 DIMM		v	v	v	v	v	v	v	v	v	v			v	v		v	v	v	v	v	v	v	v
12 DIMM	v	v	v	v	v	v	v	v	v	v	v	v	v	v	v		v	v	v	v	v	v	v	v

3-8-4 Memory Population Table

EPYC Memory Speed based on DIMM Population (One DIMM per Channel)

DIMM Type	DIMM Population	DDR5 Frequency MT/s ^{1,2}		
		6400 MT/s Grade DIMM ³	5600 MT/s Grade DIMM ³	4800 MT/s Grade DIMM ³
RDIMM	1R (1 rank)	6000	5600	4800
	2R (2 ranks)	6000	5600	4800
3DS RDIMM*	2R xH	6000 ⁴	5600	4800
MRDIMM (1:1) ⁵	4R (4 ranks)	6000 ⁴		

*For 3DS RDIMM	When x = 2	DIMM Ranks = 4
	When x = 4	DIMM Ranks = 8
	When x = 8 ⁵	DIMM Ranks = 16

Note:

- When only one DIMM is used, it must be populated in memory slot DIMM1.
- 1. Frequency subject to change based on validation.
- 2. Maximum frequency references 14L 74mil low-Dk PCB stackup.
- 3. 6000 MT/s pending ecosystem enablement.
- 4. MRDIMM will be evaluated as a post-PR feature, pending ecosystem readiness.
- 5. 3DS RDIMM at 2 Rank (8H DRAM Pkgs) will be a post-PR feature, pending ecosystem readiness.

3-9 Installing the PCI Expansion Card

- The PCI riser assembly does not include a riser card or any cabling as standard. To install a PCI card, a riser card must be installed.

Follow these instructions to install the right PCI Expansion card:

1. Remove the three screws securing the riser bracket to the system.
2. Lift up the riser bracket out of system.
3. Align the PCIe card to the riser guide slot and push in the direction of the arrow until the PCIe card sits in the PCI card connector.
4. Secure the PCIe card with a screw.
5. Reverse steps 1 - 3 to install the riser bracket back into the system.

Follow these instructions to install the left PCI Expansion card:

1. Remove the three screws on the riser bracket to the system.
2. Lift up the riser bracket out of system.
3. Remove the screw securing the side bracket to the riser bracket.
4. Remove the side bracket
5. Align the PCIe card to the riser guide slot and push in the direction of the arrow until the PCI-E card sits in the PCI card connector.
6. Secure the PCIecard with a screw.
7. Install the side bracket to the riser bracket.
8. Secure the side bracket to the riser bracket with a screw.
9. Reverse steps 1 - 2 to install the riser bracket back into the system.

3-10 Removing and Installing the Rear IO Card

Follow these instructions to install the Rear IO card:

1. Remove the three screws securing the Rear IO card to the system.
2. Lift up the Rear IO card out of system.
3. Reverse steps 1 - 2 to install the Rear IO card back into the system.

3-11 Installing the Mezzanine Card

3-11-1 Installing the OCP 3.0 Mezzanine Card

Use of the following type of OCP 3.0 NIC is recommended:

- OCP 3.0 SFF with pull tab
- OCP 3.0 SFF with ejector latch

Follow these instructions to install an OCP 3.0 Mezzanine card:

1. Remove the one screw securing the OCP 3.0 card slot cover.
2. Remove the slot cover from the system.
3. Insert the OCP 3.0 card into the card slot ensuring that the card is firmly connected to the connector on the motherboard.
4. Tighten the thumbnail screw to secure the OCP 3.0 card in place.
5. Reverse steps 3-4 to replace the OCP 3.0 card.

3-12 Replacing the Fan Assembly

- Voltages can be present within the server whenever an AC power source is connected. This voltage is present even when the main power switch is in the off position. Ensure that the system is powered-down and all power sources have been disconnected from the server prior to replacing a system fan.

Failure to observe these warnings could result in personal injury or damage to equipment.

Follow these instructions to replace the fan assembly:

1. Lift up the fan assembly from the chassis.
2. Reverse the previous steps to install the replacement fan assembly.

3-13 Replacing the Power Supply

Follow these instructions to replace the power supply:

1. Pull up the power supply handle and press the retaining clip on the right side of the power supply along the direction of the arrow. At the same time, pull out the power supply by using its handle.
2. Insert the replacement power supply firmly into the chassis. Connect the AC power cord to the replacement power supply.

3-14 Cable Routing

A	Front Panel LEDs and Buttons Cable	Motherboard: FP_1
		Front IO Board: FP_1
		Front IO Board: FP_1

A	Top Middle Board to HDD Back Plane Board Cable (SATA1)	Middle Board: N1_SATA
		F/ HDD Board: N1 SATA
B	Top Middle Board to HDD Back Plane Board Cable (SATA3)	Middle Board: N3_SATA
		F/ HDD Board: N3 SATA
C	Bottom Middle Board to HDD Back Plane Board Cable (SATA2)	Middle Board: N2_SATA
		F/ HDD Board: N2 SATA
D	Bottom Middle Board to HDD Back Plane Board Cable (SATA4)	Middle Board: N4_SATA
		F/ HDD Board: N4 SATA

A	Top Middle Board to HDD Back Plane Board Cable (NVMe/Node1)	Middle Board: N1_U2_B
		F/ HDD Board: N1 U.2 A
B	Top Middle Board to HDD Back Plane Board Cable (NVMe/Node1)	Middle Board: N1_U2_A
		F/ HDD Board: N1 U.2 B
C	Top Middle Board to HDD Back Plane Board Cable (NVMe/Node3)	Middle Board: N3_U2_B

D	Top Middle Board to HDD Back Plane Board Cable (NVMe/Node3)	Middle Board: N3_U2_A
		F/ HDD Board: N3 U.2 B

E	Bottom Middle Board to HDD Back Plane Board Cable (NVMe/Node2)	Middle Board: N2_U2_B
		F/ HDD Board: N2 U.2 A
F	Bottom Middle Board to HDD Back Plane Board Cable (NVMe/Node2)	Middle Board: N1_U2_A
		F/ HDD Board: N2 U.2 B
G	Bottom Middle Board to HDD Back Plane Board Cable (NVMe/Node4)	Middle Board: N4_U2_B
		F/ HDD Board: N4 U.2 A
H	Bottom Middle Board to HDD Back Plane Board Cable (NVMe/Node4)	Middle Board: N1_U2_A
		F/ HDD Board: N4 U.2 B

A	On board SATA Cable	Motherboard: MCIO_SATA
		Motherboard: SATA0

A	SAS RAID Card Cable	Motherboard: MCIO_SATA
		RAID Card

Chapter 4 Motherboard Components

4-1 Motherboard Components

Item	Description
1	OCP 3.0 Connector (PCIe Gen5 x16)
2	Proprietary PCIe Slot (Gen 5/ x16 slot/ GENZ_2)
3	Rear IO Card (MLAN/GbE LAN/USB/Mini DP Port)
4	BMC Readiness LED
5	Serial Port Cable Connector
6	PSOUT Connector
7	Proprietary PCIe Slot (Gen 5/ x10 slot/ GENZ_3)
8	BMC Flash ROM #2
9	BMC Flash ROM #1
10	SlimLine SAS Connector (SATA0/SATA Signal)
11	SlimLine SAS Connector (MCIO_SATA/SATA Signal Input)
12	PCIe/SATA Connector
13	PCIe Connector
14	Powe Connector
15	TPM Module Connector
16	System Battery
17	Proprietary PCIe Slot (Gen 5/ x16 slot/ GENZ_1)

4-2 Jumper Setting

J1	ON	OFF
1	HSB_SEL	BIOS Defined
2	--	Reserved
3	BIOS_PWD	Clear supervisor password Normal [Default]
4	BIOS_RCVR	BIOS recovery mode Normal [Default]

4-3 Backplane Board Storage Connector

4-3-1 CBPH701

Item	Description
1	SlimLine SAS Connector (N1 U.2 A)
2	SlimLine SAS Connector (N1 U.2 B)
3	SlimLine SAS Connector (N2 U.2 A)
4	SlimLine SAS Connector (N2 U.2 B)
5	SlimLine SAS Connector (N3 U.2 A)
6	SlimLine SAS Connector (N3 U.2 B)
7	SlimLine SAS Connector (N4 U.2 A)
8	SlimLine SAS Connector (N4 U.2 B)
9	Proprietary PCIe Slot (x8 slot/ GF_HDD)
10	SlimLine SAS Connector (N4 SATA)
11	SlimLine SAS Connector (N3 SATA)
12	SlimLine SAS Connector (N2 SATA)
13	SlimLine SAS Connector (N1 SATA)

Chapter 5 BIOS Setup

BIOS (Basic Input and Output System) records hardware parameters of the system in the EFI on the motherboard. Its major functions include conducting the Power-On Self-Test (POST) during system startup, saving system parameters, loading the operating system etc. The BIOS includes a BIOS Setup program that allows the user to modify basic system configuration settings or to activate certain system features. When the power is turned off, the battery on the motherboard supplies the necessary power to the CMOS to keep the configuration values in the CMOS.

To access the BIOS Setup program, press the key during the POST when the power is turned on.

- BIOS flashing is potentially risky, if you do not encounter any problems when using the current BIOS version, it is recommended that you don't flash the BIOS. To flash the BIOS, do it with caution. Inadequate BIOS flashing may result in system malfunction.
- It is recommended that you not alter the default settings (unless you need to) to prevent system instability or other unexpected results. Inadequately altering the settings may result in system's failure to boot. If this occurs, try to clear the CMOS values and reset the board to default values. (Refer to the **Exit** section in this chapter or introductions of the battery/clearing CMOS jumper in Chapter 4 for how to clear the CMOS values.)

BIOS Setup Program Function Keys

<<-><->>	Move the selection bar to select the screen
<↑><↓>	Move the selection bar to select an item
<+>	Increase the numeric value or make changes
<->	Decrease the numeric value or make changes
<Enter>	Execute command or enter the submenu
<Esc>	Main Menu: Exit the BIOS Setup program Submenus: Exit current submenu
<F1>	Show descriptions of general help
<F3>	Restore the previous BIOS settings for the current submenus
<F9>	Load the Optimized BIOS default settings for the current submenus
<F10>	Save all the changes and exit the BIOS Setup program

■ **Main**

This setup page includes all the items of the standard compatible BIOS.

■ **Advanced**

This setup page includes all the items of AMI BIOS special enhanced features.

(ex: Auto detect fan and temperature status, automatically configure hard disk parameters.)

■ **AMD CBS**

This setup page includes the common items for configuration of AMD motherboard-related information.

■ **AMD PBS Option**

This setup page includes the common items for configuration of AMD CPM RAS related settings.

■ **Chipset**

This setup page includes all the submenu options for configuring the functions of the North Bridge.

■ **Server Management**

Server additional features enabled/disabled setup menus.

■ **Security**

Change, set, or disable supervisor and user password. Configuration supervisor password allows you to restrict access to the system and BIOS Setup.

A supervisor password allows you to make changes in BIOS Setup.

A user password only allows you to view the BIOS settings but not to make changes.

■ **Boot**

This setup page provides items for configuration of the boot sequence.

■ **Save & Exit**

Save all the changes made in the BIOS Setup program to the CMOS and exit BIOS Setup. (Pressing <F10> can also carry out this task.)

Abandon all changes and the previous settings remain in effect. Pressing <Y> to the confirmation message will exit BIOS Setup. (Pressing <Esc> can also carry out this task.)

5-1 The Main Menu

Once you enter the BIOS Setup program, the Main Menu (as shown below) appears on the screen. Use arrow keys to move among the items and press <Enter> to accept or enter other sub-menu.

Main Menu Help

The on-screen description of a highlighted setup option is displayed on the bottom line of the Main Menu.

Submenu Help

While in a submenu, press <F1> to display a help screen (General Help) of function keys available for the menu. Press <Esc> to exit the help screen. Help for each item is in the Item Help block on the right side of the submenu.

- When the system is not stable as usual, select the **Restore Defaults** item to set your system to its defaults.
- The BIOS Setup menus described in this chapter are for reference only and may differ by BIOS version.

Parameter	Description
BIOS Information	
Project Name	Displays the project name information.
Project Version	Displays version number of the BIOS setup utility.
Build Date and Time	Displays the date and time when the BIOS setup utility was created.
BMC Information ^(Note1)	
BMC Firmware Version ^(Note1)	Displays BMC firmware version information.
Processor Information	
CPU Brand String / CPU Speed / Processor Core / Microcode Patch	Displays the technical specifications for the installed processor(s).
Total Memory ^(Note2)	Displays the total memory size of the installed memory.
Memory Speed ^(Note2)	Displays the frequency information of the installed memory.
VR Information Version	Displays VR version information.
AGESA PI Version	
PI Version	Displays AGESA PI version information.

(Note1) Functions available on selected models.

(Note2) This section will display capacity and frequency information of the memory that the customer has installed.

Parameter	Description
Onboard LAN Information	
LAN1/LAN2 MAC Address ^(Note)	Displays LAN MAC address information.
System Date	Sets the date following the weekday-month-day-year format.
System Time	Sets the system time following the hour-minute-second format.

(Note) The number of LAN ports listed will depend on the motherboard / system model.

5-2 Advanced Menu

The Advanced Menu displays submenu options for configuring the function of various hardware components. Select a submenu item, then press <Enter> to access the related submenu screen.

5-2-1 CPU Configuration

Parameter	Description
SVM Mode	Enable/Disable the CPU Virtualization. Options available: Disabled, Enabled. Default setting is Enabled .
CPU 0/1 Information	Press [Enter] to view the memory information related to CPU 0/1.

5-2-2 NVMe Configuration

Parameter	Description
NVMe Configuration	Displays the NVMe devices connected to the system.
NVMe LED Control	Enable/Disable NVMe LED Control. Options available: System Default, Disabled, Enabled. Default setting is System Default .

5-2-3 SATA Configuration

Parameter	Description
SATA Configuration	Displays the installed HDD devices information. System will automatically detect HDD type.

5-2-4 USB Configuration

Parameter	Description
USB Configuration	
USB Module Version	Displays the USB module version information.
USB Controllers	Displays the supported USB controllers.
USB Devices:	Displays the USB devices connected to the system.
Legacy USB Support	Enable/Disable the Legacy USB support function. AUTO option disables legacy support if no USB devices are connected. DISABLE option will keep USB devices available only for EFI applications. Options available: Enabled, Disabled, Auto. Default setting is Enabled .
XHCI Hand-off	Enable/Disable the XHCI Hand-off support. Options available: Enabled, Disabled. Default setting is Enabled .
USB Mass Storage Driver Support ^(Note)	Enable/Disable the USB Mass Storage Driver Support. Options available: Disabled, Enabled. Default setting is Enabled .
USB hardware delays and time-outs	
USB transfer time-out	Selects the time-out value for USB Control/Bulk/Interrupt transfers. Options available: 1 sec, 5 sec, 10 sec, 20 sec. Default setting is 20 sec .

(Note) This item is present only if you attach USB devices.

Parameter	Description
Device reset time-out	Selects the time-out value during a USB mass storage device reset. Options available: 10 sec, 20 sec, 30 sec, 40 sec. Default setting is 20 sec .
Device power-up delay	Maximum time the device will take before it properly reports itself to the Host Controller. "Auto" uses default value: for a Root port it is 100 ms, for a Hub port the delay is taken from Hub descriptor. Options available: Auto, Manual. Default setting is Auto .

5-2-5 PCI Subsystem Settings

Parameter	Description
PCI Bus Driver Version	Displays the PCI Bus Driver version information.
SLOT#_Lanes Configuration ^(Note1)	Change the PCIe lanes. Options available: Disabled, Auto, x16, x8x8, x8x4x4, x4x4x8, x4x4x4x4. Default setting is Auto .
SLOT #_I/O ROM ^(Note1)	When enabled, this setting will initialize the device expansion ROM for the related PCI-E slot. Options available: Disabled, Enabled. Default setting is Enabled .
SLOT #_Link Speed ^(Note1)	Configure PCIe max link speed. Options available: Auto, Gen5, Gen4, Gen3, Gen2, Gen1. Default setting is Auto .
OCF# Lanes ^(Note2)	Change mezzanine PCIe lanes. Options available: Disabled, Auto, x16, x8x8, x8x4x4, x4x4x8, x4x4x4x4. Default setting is Auto .
OCF# I/O ROM ^(Note2)	When enabled, this setting will initialize the device expansion ROM for the related devices. Options available: Disabled, Enabled. Default setting is Enabled .
OCF# Link Speed ^(Note2)	Configure mezzanine OCP max link speed. Options available: Auto, Gen5, Gen4, Gen3, Gen2, Gen1. Default setting is Auto .
Onboard LAN Controller ^(Note3)	Enable/Disable the onboard LAN devices. Options available: Disabled, Enabled. Default setting is Enabled .
Onboard LAN# I/O ROM ^(Note3)	Enable/Disable the onboard LAN devices, and initializes device expansion ROM. Options available: Disabled, Enabled. Default setting is Enabled .

(Note1) This section is dependent on the available PCIe Slot.

(Note2) This section is dependent on the available OCP connector.

(Note3) This section is dependent on the available LAN controller.

5-2-6 AST2600 Super IO Configuration

Parameter	Description
AST2600 Super IO Configuration	
Super IO Chip	Displays the super IO chip information
Serial Port 1 Configuration	Press [Enter] for configuration of advanced items.

5-2-6-1 Serial Port 1 Configuration

Parameter	Description
Serial Port 1 Configuration	
Serial Port ^(Note)	Enable/Disable the Serial Port (COM). When set to Enabled allows you to configure the Serial port 1 settings. When set to Disabled, displays no configuration for the serial port. Options available: Disabled, Enabled. Default setting is Enabled .
Devices Settings	Displays the Serial Port 1 device settings.
Change Settings	Select an optimal settings for Super IO Device. Options available for Serial Port 1: Auto IO=3F8h; IRQ=4; IO=3F8h; IRQ=3, 4, 5, 6, 7, 9, 10, 11, 12; IO=2F8h; IRQ=3, 4, 5, 6, 7, 9, 10, 11, 12; IO=3E8h; IRQ=3, 4, 5, 6, 7, 9, 10, 11, 12; IO=2E8h; IRQ=3, 4, 5, 6, 7, 9, 10, 11, 12; Default setting is Auto .

(Note) Advanced items prompt when this item is defined.

5-2-7 Serial Port Console Redirection

Parameter	Description
COM1/Serial Over LAN Console Redirection ^(Note)	Select whether to enable console redirection for specified device. Console redirection enables the users to manage the system from a remote location. Options available: Enabled, Disabled. Default setting is Disabled .
COM1/Serial Over LAN Console Redirection Settings	Press [Enter] to configure advanced items. Please note that this item is configurable when COM1/Serial Over LAN Console Redirection is set to Enabled. <ul style="list-style-type: none"> ◆ Terminal Type <ul style="list-style-type: none"> – Selects a terminal type to be used for console redirection. – Options available: VT100, VT100Plus, ANSI, VT-UTF8. Default setting is VT100Plus. ◆ Bits per second <ul style="list-style-type: none"> – Selects the transfer rate for console redirection. – Options available: 9600, 19200, 38400, 57600, 115200. Default setting is 115200. ◆ Data Bits <ul style="list-style-type: none"> – Selects the number of data bits used for console redirection. – Options available: 7, 8. Default setting is 8.

(Note) Advanced items prompt when this item is defined.

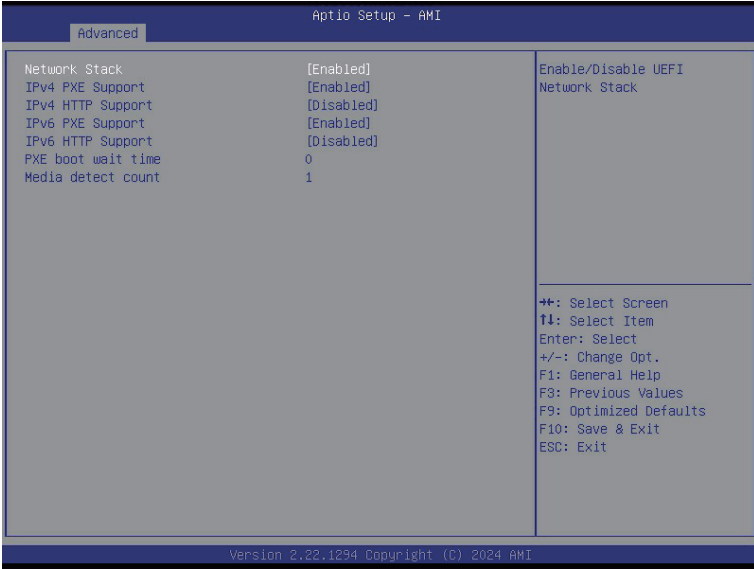

Parameter	Description
COM1/Serial Over LAN Console Redirection Settings (continued)	<ul style="list-style-type: none"> ◆ Parity <ul style="list-style-type: none"> – A parity bit can be sent with the data bits to detect some transmission errors. – Even: parity bit is 0 if the num of 1's in the data bits is even. – Odd: parity bit is 0 if num of 1's in the data bits is odd. – Mark: parity bit is always 1. Space: Parity bit is always 0. – Mark and Space Parity do not allow for error detection. – Options available: None, Even, Odd, Mark, Space. Default setting is None. ◆ Stop Bits <ul style="list-style-type: none"> – Stop bits indicate the end of a serial data packet. (A start bit indicates the beginning). The standard setting is 1 stop bit. Communication with slow devices may require more than 1 stop bit. – Options available: 1, 2. Default setting is 1. ◆ Flow Control <ul style="list-style-type: none"> – Flow control can prevent data loss from buffer overflow. When sending data, if the receiving buffers are full, a 'stop' signal can be sent to stop the data flow. Once the buffers are empty, a 'start' signal can be sent to re-start the flow. Hardware flow control uses two wires to send start/stop signals. – Options available: None, Hardware RTS/CTS. Default setting is None. ◆ VT-UTF8 Combo Key Support <ul style="list-style-type: none"> – Enable/Disable the VT-UTF8 Combo Key Support. – Options available: Enabled, Disabled. Default setting is Enabled. ◆ Recorder Mode <ul style="list-style-type: none"> – When this mode enabled, only texts will be send. This is to capture Terminal data. – Options available: Enabled, Disabled. Default setting is Disabled. ◆ Resolution 100x31 <ul style="list-style-type: none"> – Enable/Disable extended terminal resolution. – Options available: Enabled, Disabled. Default setting is Enabled. ◆ Putty KeyPad <ul style="list-style-type: none"> – Selects Function Key and KeyPad on Putty. – Options available: VT100, LINUX, XTERMR6, SC0, ESCN, VT400. Default setting is VT100.

Parameter	Description
Legacy Console Redirection	
Legacy Console Redirection Settings	<p>Press [Enter] to configure advanced items.</p> <ul style="list-style-type: none"> ◆ Redirection COM Port <ul style="list-style-type: none"> – Selects a COM port for Legacy serial redirection. – Default setting is COM1/SOL. ◆ Resolution <ul style="list-style-type: none"> – Selects the number of rows and columns used in Console Redirection for legacy OS support. – Options available: 80x24, 80x25. Default setting is 80x24. ◆ Redirect After POST <ul style="list-style-type: none"> – When Bootloader is selected, then Legacy Console Redirection is disabled before booting to legacy OS. When Always Enable is selected, then Legacy Console Redirection is enabled for legacy OS. – Options available: Always Enable, BootLoader. Default setting is Always Enable.
Serial Port for Out-of-Band Management / Windows Emergency Management Services (EMS) Console Redirection ^(Note)	<p>EMS console redirection allows the user to configure Console Redirection Settings to support Out-of-Band Serial Port management.</p> <p>Options available: Disabled, Enabled. Default setting is Disabled.</p>
Serial Port for Out-of-Band EMS Console Redirection Settings	<p>Press [Enter] to configure advanced items.</p> <p>Please note that this item is configurable when Serial Port for Out-of-Band Management EMS Console Redirection is set to Enabled.</p> <ul style="list-style-type: none"> ◆ Out-of-Band Mgmt Port <ul style="list-style-type: none"> – Microsoft Windows Emergency Management Service (EMS) allows for remote management of a Windows Server OS through a serial port. – Default setting is COM1/SOL. ◆ Terminal Type <ul style="list-style-type: none"> – Selects a terminal type to be used for console redirection. – Options available: VT100, VT100Plus, ANSI, VT-UTF8. Default setting is ANSI. ◆ Bits per second <ul style="list-style-type: none"> – Selects the transfer rate for console redirection. – Options available: 9600, 19200, 57600, 115200. Default setting is 115200.

(Note) Advanced items prompt when this item is defined.

Parameter	Description
Serial Port for Out-of-Band EMS Console Redirection Settings(continued)	<ul style="list-style-type: none">◆ Flow Control<ul style="list-style-type: none">– Flow control can prevent data loss from buffer overflow. When sending data, if the receiving buffers are full, a 'stop' signal can be sent to stop the data flow. Once the buffers are empty, a 'start' signal can be sent to re-start the flow. Hardware flow control uses two wires to send start/stop signals.– Options available: None, Hardware RTS/CTS, Software Xon/Xoff. Default setting is None.

5-2-8 Network Stack Configuration

Parameter	Description
Network Stack	Enable/Disable the UEFI network stack. Options available: Enabled, Disabled. Default setting is Enabled .
Ipv4 PXE Support ^(Note)	Enable/Disable the Ipv4 PXE feature. Options available: Enabled, Disabled. Default setting is Enabled .
Ipv4 HTTP Support ^(Note)	Enable/Disable the Ipv4 HTTP feature. Options available: Enabled, Disabled. Default setting is Disabled .
Ipv6 PXE Support ^(Note)	Enable/Disable the Ipv6 PXE feature. Options available: Enabled, Disabled. Default setting is Enabled .
Ipv6 HTTP Support ^(Note)	Enable/Disable the Ipv6 HTTP feature. Options available: Enabled, Disabled. Default setting is Disabled .
PXE boot wait time ^(Note)	Wait time in seconds to press ESC key to abort the PXE boot. Press the <+> / <-> keys to increase or decrease the desired values.
Media detect count ^(Note)	Number of times the presence of media will be checked. Press the <+> / <-> keys to increase or decrease the desired values.

(Note) This item appears when **Network Stack** is set to **Enabled**.

5-2-9 Post Report Configuration

Parameter	Description
Post Report Configuration	
Error Message Report	
Post Error Message	Enable/Disable the POST Error Message support. Options available: Enabled, Disabled. Default setting is Enabled .
Halt On	Options available: No Error, All Error. Default setting is No Error .

5-2-10 Trusted Computing

Parameter	Description
Configuration	
Security Device Support	<p>Enable/Disable BIOS support for security device. OS will not show security device. TCG EFI protocol and INT1A interface will not be available.</p> <p>Options available: Disabled, Enabled. Default setting is Enabled.</p>
SPI TPM Support	<p>Select Enable to activate TPM support feature.</p> <p>Options available: Disabled, Enabled. Default setting is Enabled.</p>

5-2-11 PSP Firmware Versions

The PSP Firmware Versions page displays the basic PSP firmware version information. Items on this window are non-configurable.

5-2-12 S5 RTC Wake Settings

Parameter	Description
Wake System from S5	<p>Enable/Disable system wake on alarm event.</p> <p>Options available: Disabled, Fixed Time, Dynamic Time. When Fixed Time is selected, system will wake on the hr::min::sec specified. Default setting is Disabled.</p>

5-2-13 Graphic Output Configuration

Parameter	Description
Output Device Type	Selects output device type. Options available: First loaded Device, Onboard Device, External Device, Specific Device. Default setting is Onboard Device .

5-2-14 AMD Mem Configuration Status

Parameter	Description
CPU 0/1	Press [Enter] to view the memory configuration status related to CPU 0/1.

5-2-15 Tls Auth Configuration

Parameter	Description
Server CA Configuration	<p>Press [Enter] for configuration of advanced items.</p> <ul style="list-style-type: none"> ◆ Enroll Cert <ul style="list-style-type: none"> – Press [Enter] to enroll a certificate <ul style="list-style-type: none"> • Enroll Cert Using File • Cert GUID <p>Input digit character in 1111111-2222-3333-4444-1234567890ab format.</p> <ul style="list-style-type: none"> – Commit Changes and Exit – Discard Changes and Exit <ul style="list-style-type: none"> ◆ Delete Cert
Client Cert Configuration	Press [Enter] for configuration of advanced items.

5-2-16 RAM Disk Configuration

Parameter	Description
Disk Memory Type	Specifies the type of memory to use from available memory pool in system to create a disk. Options available: Boot Service Data, Reserved. Default setting is Boot Service Data .
Create Raw	Creates a raw RAM disk. <ul style="list-style-type: none"> ◆ Size (Hex) <ul style="list-style-type: none"> – Input a valid RAM disk size that should be multiple of the RAM disk block size. ◆ Create & Exit ◆ Discard & Exit
Create from file	Creates a RAM disk from a given file.
Created RAM disk list	
Remove selected RAM disk(s)	Selects the RAM disk(s) to remove.

5-2-17 iSCSI Configuration

Parameter	Description
iSCSI Initiator Name	Press [Enter] and name iSCSI Initiator. Only IQN format is accepted. Range: from 4 to 223
Add an Attempt	Press [Enter] to configure advanced items.
Delete Attempts	Press [Enter] to configure advanced items.
Change Attempt Order	Press [Enter] to configure advanced items.

5-2-18 Intel(R) I350 Gigabit Network Connection

Aptio Setup - AMI		
Advanced		
<p>▶ NIC Configuration</p> <p>Blink LEDs 0</p> <p>UEFI Driver Intel(R) PRO/1000 8.5.21 PCI-E</p> <p>Adapter PBA 211015-010</p> <p>Device Name Intel(R) I350 Gigabit Network Connection</p> <p>Chip Type Intel i350</p> <p>PCI Device ID 1521</p> <p>PCI Address 53:00:00</p> <p>Link Status [Disconnected]</p> <p>MAC Address 74:56:3C:86:9B:7F</p> <p>Virtual MAC Address 00:00:00:00:00:00</p>		<p>Click to configure the network device port.</p> <hr/> <p>←→: Select Screen ↑↓: Select Item Enter: Select +/-: Change Opt. Aptio Setup - AMI		
Advanced		
<p>Link Speed [Auto Negotiated]</p> <p>Wake On LAN [Enabled]</p>		<p>Specifies the port speed used for the selected boot protocol.</p> <hr/> <p>←→: Select Screen ↑↓: Select Item Enter: Select +/-: Change Opt. F1: General Help F3: Previous Values F9: Optimized Defaults F10: Save & Exit ESC: Exit</p>
Version 2.22.1294 Copyright (C) 2024 AMI		

Parameter	Description
NIC Configuration	<p>Press [Enter] to configure advanced items.</p> <ul style="list-style-type: none"> ◆ Link Speed <ul style="list-style-type: none"> – Allows for automatic link speed adjustment. – Options available: Auto Negotiated, 10 Mbps Half, 10 Mbps Full, 100 Mbps Half, 100 Mbps Full. Default setting is Auto Negotiated. ◆ Wake On LAN <ul style="list-style-type: none"> – Enables power on of the system via LAN. Note that configuring Wake on LAN in the operating system does not change the value of this setting, but does override the behavior of Wake on LAN in OS controlled power states. – Options available: Disabled, Enabled. Default setting is Enabled.
Blink LEDs	<p>Identifies the physical network port by blinking the associated LED. Press the numeric keys to adjust desired values.</p>
UEFI Driver	Displays the technical specifications for the Network Interface Controller.
Adapter PBA	Displays the technical specifications for the Network Interface Controller.
Device Name	Displays the technical specifications for the Network Interface Controller.
Chip Type	Displays the technical specifications for the Network Interface Controller.
PCI Device ID	Displays the technical specifications for the Network Interface Controller.
PCI Address	Displays the technical specifications for the Network Interface Controller.
Link Status	Displays the technical specifications for the Network Interface Controller.
MAC Address	Displays the technical specifications for the Network Interface Controller.
Virtual MAC Address	Displays the technical specifications for the Network Interface Controller.

5-2-19 VLAN Configuration

Parameter	Description
Enter Configuration Menu	<p>Press [Enter] to configure advanced items.</p> <ul style="list-style-type: none"> ◆ Create new VLAN ◆ VLAN ID <ul style="list-style-type: none"> – Sets VLAN ID for a new VLAN or an existing VLAN. – Press the <+> / <-> keys to increase or decrease the desired values. – The valid range is from 0 to 4094. ◆ Priority <ul style="list-style-type: none"> – Sets 802.1Q Priority for a new VLAN or an existing VLAN. – Press the <+> / <-> keys to increase or decrease the desired values. – The valid range is from 0 to 7. ◆ Add VLAN <ul style="list-style-type: none"> – Press [Enter] to create a new VLAN or update an existing VLAN. ◆ Configured VLAN List ◆ Remove VLAN <ul style="list-style-type: none"> – Press [Enter] to remove an existing VLAN.

5-2-20 MAC IPv4 Network Configuration

Parameter	Description
Configured	Indicates whether network address is configured successfully or not. Options available: Enabled, Disabled. Default setting is Disabled .
Enable DHCP ^(Note)	Options available: Enabled, Disabled. Default setting is Disabled .
Local IP Address ^(Note)	Press [Enter] to configure local IP address.
Local NetMask ^(Note)	Press [Enter] to configure local NetMask.
Local Gateway ^(Note)	Press [Enter] to configure local Gateway
Local DNS Servers ^(Note)	Press [Enter] to configure local DNS servers
Save Changes and Exit	Press [Enter] to save all configurations.

(Note) This item appears when **Configured** is set to **Enabled**.

5-2-21 MAC IPv6 Network Configuration

Parameter	Description
Enter Configuration Menu	<p>Press [Enter] to configure advanced items.</p> <ul style="list-style-type: none"> ◆ Displays the MAC Address information. ◆ Interface ID <ul style="list-style-type: none"> – The 64 bit alternative interface ID for the device. The string is colon separated. e.g. ff:dd:88:66:cc:1:2:3. ◆ DAD Transmit Count <ul style="list-style-type: none"> – The number of consecutive Neighbor solicitation messages sent while performing Duplicate Address Detection on a tentative address. A value of zero indicates that Duplicate Address Detection is not performed. ◆ Policy <ul style="list-style-type: none"> – Options available: automatic, manual. Default setting is automatic. ◆ Save Changes and Exit <ul style="list-style-type: none"> – Press [Enter] to save all configurations.

5-3 AMD CBS Menu

AMD CBS menu displays submenu options for configuring the CPU-related information that the BIOS automatically sets. Select a submenu item, then press [Enter] to access the related submenu screen.

5-3-1 CPU Common Options

Parameter	Description
CPU Common Options	
Performance	Press [Enter] for configuration of advanced items.
REP-MOV/STOS Streaming	Allow REP-MOV/STOS to use non-caching streaming stores for large sizes. Options available: Disabled, Enabled. Default setting is Enabled .
Prefetcher settings	Press [Enter] for configuration of advanced items.
Core Watchdog	Press [Enter] for configuration of advanced items.
RedirectForReturnDis	From a workaround for GCC/C000005 issue for XV Core on CZ A0, setting MSRC001_1029 Decode Configuration (DE_CFG) bit 14 [DecfgNoRdrctForReturns] to 1. Options available: Auto, 1, 0. Default setting is Auto .
Platform First Error Handling	Enable/Disable PFEH, cloak individual banks, and mask deferred error interrupts from each bank. Options available: Enabled, Disabled, Auto. Default setting is Auto .
Core Performance Boost	Enable/Disable the Core Performance Boost function. Options available: Disabled, Auto. Default setting is Auto .
Global C-state Control	Controls the IO based C-state generation and DF C-states. Options available: Disabled, Enabled, Auto. Default setting is Auto .
Power Supply Idle Control	Configures the Power Supply Idle Control. Options available: Low Current Idle, Typical Current Idle, Auto. Default setting is Auto .
Streaming Stores Control	Enable/Disable the Streaming Stores functionality. Options available: Disabled, Enabled, Auto. Default setting is Auto .
Local APIC Mode	Sets the Local APIC Mode. Options available: Compatibility, xAPIC, x2APIC, Auto. Default setting is Auto .
ACPI_CST C1 Declaration	Determines whether or not to declare the C1 state to the OS.. Options available: Disabled, Enabled, Auto. Default setting is Auto .
ACPI CST C2 Latency	Enter in microseconds (decimal value).
MCA error thresh enable	Enable MCA error thresholding. Options available: False, True, Auto. Default setting is True .
MCA error thresh count	Effective error threshold count = 0xFFFF(4095) - <this value> (e.g. the default value of 0xFF5(4085) results in a threshold of 0xA (10)).
MCA FruText	Enable MCA FruText. Options available: False, True. Default setting is True .
SMU and PSP Debug Mode	When this option is enabled, specific uncorrected errors detected by the PSP FW or SMU FW will hand and not reset the system. Options available: Disabled, Enabled, Auto. Default setting is Auto .
PPIN Opt-in	Enable/Disable the PPIN feature. Options available: Disabled, Enabled, Auto. Default setting is Auto .
SMEE	Controls the Secure Memory Encryption Enable (SMEE) function. Options available: Disable, Enable, Auto. Default setting is Auto .
Action on BIST Failure	Action to take when a CCD BIST failure is detected. Options available: Do nothing, Down-CCD, Auto. Default setting is Auto .

Parameter	Description
Enhanced REP MOVSB/ STOSB (ERSM)	Options available: Disabled, Enabled, Auto. Default setting is Auto .
Log Transparent Errors	Enable/Disable the log Transparent errors function. Options available: Auto, Disabled, Enabled. Default setting is Auto .
AVX512	Enable/Disable AVX512. Options available: Disabled, Enabled, Auto. Default setting is Auto .
Enhanced REP Movs Stos B	Options available: Disabled, Enabled, Auto. Default setting is Auto .
MONITOR and MWAIT disable	The MONITOR, MWAIT, MONITORX and MWAITX opcodes become invalid when enabled. Options available: Enabled, Disabled, Auto. Default setting is Auto
CPU Speculative Store Modes	Select the CPU speculative store modes. Options available: Balanced, More Speculative, Less Speculative, Auto. Default setting is Auto .
Fast Short REP MOVSB (FSRM)	Options available: Disabled, Enabled, Auto. Default setting is Auto .
PauseCntSel_1_0	Options available: Disabled, Enabled, Auto. Default setting is Auto .
Prefetch/Request Throttle	Enables XI logic which calculates average latency, updates throttle level, and sends throttle level messages to L2. Options available: Disable, Enable, Auto. Default setting is Auto .
Scan Dump Debug Enable	Options available: Disable, Enable. Default setting is Disable .
MCAX 64 bank support	Options available: Disabled, Enabled, Auto. Default setting is Auto .
Adaptive Allocation (AA)	Options available: Disabled, Enabled, Auto. Default setting is Auto .
Latency Under Load (LUL)	Options available: Disabled, Enabled, Auto. Default setting is Auto .
Core Trace Dump Enable	Options available: Disable, Enable. Default setting is Disable .
FP512	Options available: Disabled, Enabled, Auto. Default setting is Auto .

5-3-1-1 Performance

Parameter	Description
Performance	
OC Mode ^(Notes)	Options available: Normal Operation, Customized. Default setting is Normal Operation .
Custom Core Pstates	Allows you to accept or decline enabling Custom Core Pstates. When accepted, you can disable or customize core pstates.
CCD/Core/Thread Enablement	Allows you to accept or decline enabling CCDs, processor cores and threads. When accepted, you can control the number of CCDs to be used, and the number of cores to be used. <ul style="list-style-type: none"> ◆ CCD Control <ul style="list-style-type: none"> – Options available: Auto, 2 CCDs, 4 CCDs, 6 CCDs, 8 CCDs, 10 CCDs. Default setting is Auto. ◆ Core Control <ul style="list-style-type: none"> – Options available: Auto, ONE(1+0), TWO(2+0), THREE(3+0) FOUR(4+0), FIVE(5+0), SIX(6+0), SEVEN(7+0). – Default setting is Auto.
SMT Control	Can be used to disable symmetric multithreading. To re-enable SMT, a POWER CYCLE is needed after select the 'Enable' option. Select 'Auto' base on BIOS PCD. (PcdAmdSmtMode) default setting. Options available: Disable, Enable, Auto. Default setting is Enable .
Enable Requested CPU min frequency	Options available: Disable, Enable, Auto. Default setting is Disable .

(Note) Advanced items are configurable when this item is defined.

5-3-1-2 Prefetcher Settings

Parameter	Description
Prefetcher settings	
L1 Stream HW Prefetcher	Enable/Disable L1 Stream HW Prefetcher. Options available: Disable, Enable, Auto. Default setting is Auto .
L1 Stride Prefetcher	Use memory access history of individual instructions to fetch additional lines when each access is a constant distance from the previous. Enable/Disable L1 Stride Prefetcher. Options available: Disable, Enable, Auto. Default setting is Auto .
L1 Region Prefetcher	Use memory access history to fetch additional lines when the data access for a given instruction tends to be followed by other data accesses. Enable/Disable L1 Region Prefetcher. Options available: Disable, Enable, Auto. Default setting is Auto .
L2 Stream HW Prefetcher	Enable/Disable L2 Stream HW Prefetcher. Options available: Disable, Enable, Auto. Default setting is Auto .
L2 Up/Down Prefetcher	Use memory access history to determine whether to fetch the next or previous line for all memory accesses. Enable/Disable L2 Up/Down Prefetcher. Options available: Disable, Enable, Auto. Default setting is Auto .
L1 Burst Prefetch Mode	Enable/Disable L1 Burst Prefetch Mode. Options available: Disable, Enable, Auto. Default setting is Auto .

5-3-1-3 Core Watchdog

Parameter	Description
Core Watchdog	
Core Watchdog Timer Enable ^(Note)	Enable/Disable CPU Watchdog Timer. Options available: Disabled, Enabled, Auto. Default setting is Auto .
Core Watchdog Timer Interval	Select the CPU Watchdog Timer interval. Options available: 2.681s, 1.340s, 669.41ms, 334.05ms, 166.37ms, 82.53ms, 40.61ms, 20.970ms, 10.484ms, 5.241ms, 2.620ms, 1.309ms, 654.08us, 326.4us, 162.56us, 80.64us, 39.68us, Auto. Default setting is Auto .
Core Watchdog Timer Severity	Options available: No Error, Transparent, Corrected, Deferred, Uncorrected, Fatal, Auto. Default setting is Auto .

(Note) Advanced items prompt when this item is defined.

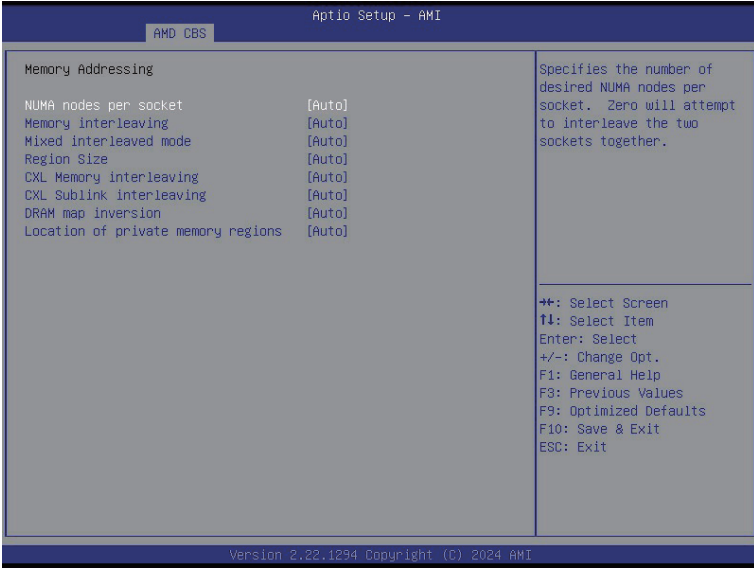

5-3-2 DF Common Options

Parameter	Description
DF Common Options	
Memory Addressing	Press [Enter] for configuration of advanced items.
ACPI	Press [Enter] for configuration of advanced items.
Link	Press [Enter] for configuration of advanced items.
SDCI	Press [Enter] for configuration of advanced items.
Probe Filter	Press [Enter] for configuration of advanced items.
DF Watchdog Timer Interval	Configures the Data Fabric watchdog timer interval. Options available: Auto, 41ms, 166ms, 334ms, 669ms, 1.34 seconds, 2.68 seconds, 5.36 seconds. Default setting is Auto .
Disable DF to external IP sync flood propagation	Enable/Disable SyncFlood to UMC & downstream slaves. Options available: Sync flood disabled, Sync flood enabled, Auto. Default setting is Auto .
Sync flood propagation to DF Components	Enable/Disable DF Sync Flood propagation. Options available: Sync flood disabled, Sync flood enabled, Auto. Default setting is Auto .
Freeze DF module queues on error	Options available: Disabled, Enabled, Auto. Default setting is Auto .
CC6 memory region encryption	Controls whether or not the CC6 save/restor memory is encrypted. Options available: Disabled, Enabled, Auto. Default setting is Auto .
CCD B/W Balance Throttle Level	Options available: Auto, Level 0, Level 1, Level 2, Level 3, Level 4. Default setting is Auto .

Parameter	Description
Number of PCI Segments	Options available: Auto, 1 Segment, 2 Segments, 4 Segment. Default setting is Auto .
CCM Throttler	Options available: Disabled, Enabled, Auto. Default setting is Auto .
Clean Victim FTI Cmd Balancing	Options available: Disabled, Enabled, Auto. Default setting is Auto .
CXL Strongly Ordered writes	Options available: Disabled, Enabled, Auto. Default setting is Disabled .

5-3-2-1 Memory Addressing

Parameter	Description
Memory Addressing	
NUMA nodes per socket	Specifies the number of desired NUMA nodes per socket. Options available: NPS0, NPS1, NPS2, NPS4, Auto. Default setting is Auto . NOTE! <ul style="list-style-type: none"> • Available options may vary by system configuration. • Only dual processor configuration supports NPS0.
Memory interleaving	Enable/Disable the Memory interleaving feature. Options available: Disabled, Auto, Enabled. Default setting is Auto .
Mixed interleaving mode	Allows for interleaving UMC and CXL together. Options available: Disabled, Auto, Enabled. Default setting is Auto .
Region Size	Options available: 1 K Region Size, 2K Region Size, Auto. Default setting is Auto .
CXL Memory interleaving	Options available: Disabled, Enabled, Auto. Default setting is Auto .
CXL Sublink interleaving	Options available: Enable, Disable, Auto. Default setting is Auto .
DRAM map inversion	Enable/Disable the DRAM map inversion function. Options available: Disabled, Enabled, Auto. Default setting is Auto .
Location of private memory regions	Controls whether or not the private memory regions (PSP, SMU and CC6) are at the top of DRAM or distributed. Options available: Distributed, Consolidated, Auto. Default setting is Auto .

5-3-2-2 ACPI

Parameter	Description
ACPI	
ACPI SRAT L3 Cache As NUMA Domain	Enable/Disable report each L3 cache as a NUMA Domain to the OS. Options available: Disabled, Enabled, Auto. Default setting is Auto .
ACPI SLIT Distance Control	Determines how the SLIT distances are declared. Options available: Manual, Auto. Default setting is Auto .
ACPI SLIT remote relative distance	Sets the remote socket distance for 2P systems as near (2.8) or far (3.2). Options available: Near, Far, Auto. Default setting is Auto .

5-3-2-3 Link

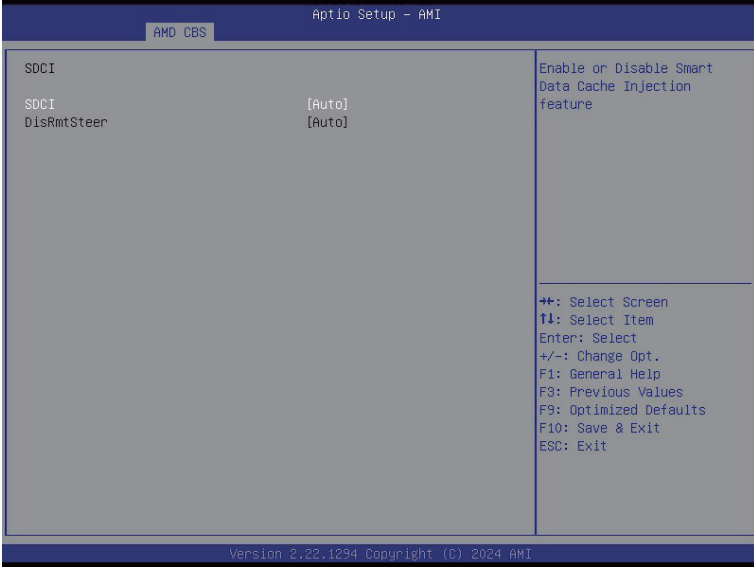

Parameter	Description
GMI encryption control	Enable/Disable GMI link encryption. Options available: Disabled, Enabled, Auto. Default setting is Auto .
xGMI encryption control	Enable/Disable xGMI link encryption. Options available: Disabled, Enabled, Auto. Default setting is Auto .
xGMI Link Configuration	Configures the number of xGMI2 links used on a multi-socket system. Options available: Auto, 3 xGMI Links, 4 xGMI Links, 2 xGMI Links + 2 PCI Links. Default setting is Auto .
4-link xGMI max speed	Specifies the max speed of 4-link xGMI. Options available: 20Gbps, 25Gbps, 32Gbps, Auto. Default setting is Auto .
3-link xGMI max speed	Specifies the max speed of 3-link xGMI. Options available: 20Gbps, 25Gbps, 32Gbps, Auto. Default setting is Auto .
xGMI CRC Scale	Configures leaky bucket scale for xGMI and WAFL CRC errors. Every scale milliseconds an error will leak from the CRC counter. Default setting is 5 .
xGMI CRC Threshold	Configures leaky bucket threshold for xGMI and WAFL CRC errors. If link CRC counter exceeds this threshold, an error will be logged. Default setting is 25 .
xGMI Preset Control	Enable/Disable xGMI Preset control. Options available: Disabled, Enabled, Auto. Default setting is Enabled .
xGMI Global Preset List	Press [Enter] to configure the xGMI Preset list.
xGMI Initial Preset	Press [Enter] to configure the xGMI Initial Preset CPU0/1 link.
xGMI Search Mask	Press [Enter] to configure the xGMI TXEQ Search Mask CPU0/1 link.

Parameter	Description
xGMI AC/DC Coupled Link	Press [Enter] to configure the xGMI AC/DC Coupled link. ♦ xGMI AC/DC Coupled Link Control ^(Note) – Options available: Manual, Auto. Default setting is Auto .
xGMI Channel Type	Press [Enter] to configure the xGMI Channel Type. ♦ xGMI Channel Type Control ^(Note) – Options available: Manual, Auto. Default setting is Auto .

(Note) Advanced items prompt when this item is defined.

5-3-2-4 SDCI

Parameter	Description
SDCI ^(Note)	Options available: Disabled, Enabled, Auto. Default setting is Auto .
DisRmSteer	Options available: Disabled, Enabled, Auto. Default setting is Auto .

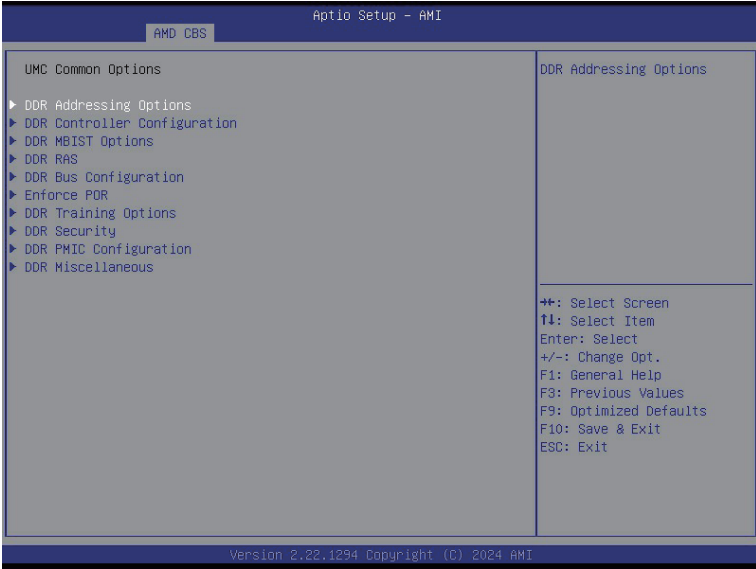

(Note) Advanced items prompt when this item is defined.

5-3-2-5 Probe Filter

Parameter	Description
Organization	Specifies whether multiple memory/CXL channels will share probe filter storage. Options available: Auto, Dedicated, Shared. Default setting is Dedicated .
Periodic Directory Rinse (PDR) Tuning	Controls PDR settings that may impact performance by workload and/or processor. Options available: Memory-Sensitive, Cache-Bound, Neutral, Adaptive, Auto. Default setting is Auto .

5-3-3 UMC Common Options

Parameter	Description
UMC Common Options	
DDR Addressing Options	Press [Enter] for configuration of advanced items.
DDR Controller Configuration	Press [Enter] for configuration of advanced items.
DDR MBIST Options	Press [Enter] for configuration of advanced items.
DDR RAS	Press [Enter] for configuration of advanced items.
DDR Bus Configuration	Press [Enter] for configuration of advanced items.
Enforce POR	Press [Enter] for configuration of advanced items.
DDR Training Options	Press [Enter] for configuration of advanced items.
DDR Security	Press [Enter] for configuration of advanced items.
DDR PMIC Configuration	Press [Enter] for configuration of advanced items.
DDR Miscellaneous	Press [Enter] for configuration of advanced items.

5-3-3-1 DDR Addressing Options

Parameter	Description
DDR Addressing Options	
Chipselect Interleaving	Interleaves memory blocks across the DRAM chip selects for node 0. Options available: Disabled, Auto. Default setting is Auto .
Address Hash Bank	Enable or disable bank addressing hashing. Options available: Disabled, Enabled, Auto. Default setting is Auto .
Address Hash CS	Enable or disable CS addressing hashing. Options available: Auto, Enabled, Disabled. Default setting is Auto .
Address Hash RM	Enable or disable RM addressing hashing for 3DS DIMMs. Options available: Auto, Enabled, Disabled. Default setting is Auto .
Address Hash Subchannel	Enable or disable sub-channel addressing hashing. Options available: Auto, Enabled, Disabled. Default setting is Auto .
BankSwapMode	Options available: Auto, Disabled, Swap CPU. Default setting is Auto .

5-3-3-2 DDR Controller Configuration

Parameter	Description
DDR Controller Configuration	
DDR Power Options	Press [Enter] for configuration of advanced items.
Memory Channel Disable	Press [Enter] for configuration of advanced items.
Refresh Management (RFM)	Press [Enter] for configuration of advanced items.
Memory Context Restore	Options available: Disabled, Enabled, Auto. Default setting is Auto .
DRAM Survives Warm Reset	Options available: Disabled, Enabled. Default setting is Disabled .

5-3-3-2-1 DDR Power Options

Parameter	Description
DDR Power Options	
Power Down Enable	Enable or disable DDR power down mode. Options available: Disabled, Enabled, Auto. Default setting is Auto .
Sub Urgent Refresh Lower Bound	Specifies the stored refresh limit required to enter sub-urgent refresh mode.
Urgent Refresh Limit	Specifies the stored refresh limit required to enter urgent refresh mode.
DRAM Refresh Rate	DRAM refresh rate: 1.95us or 3.9us. Options available: 3.9 usec, 1.95 usec. Default setting is 3.9 usec .
Self-Refresh Exit Staggering	Options available: Disabled, n=1~9. Default setting is n=9 .
DRAM 2X Refresh Temperature Threshold	Options available: 85-100. Default setting is 85-90 .

5-3-3-2-2 Memory Channel Disable

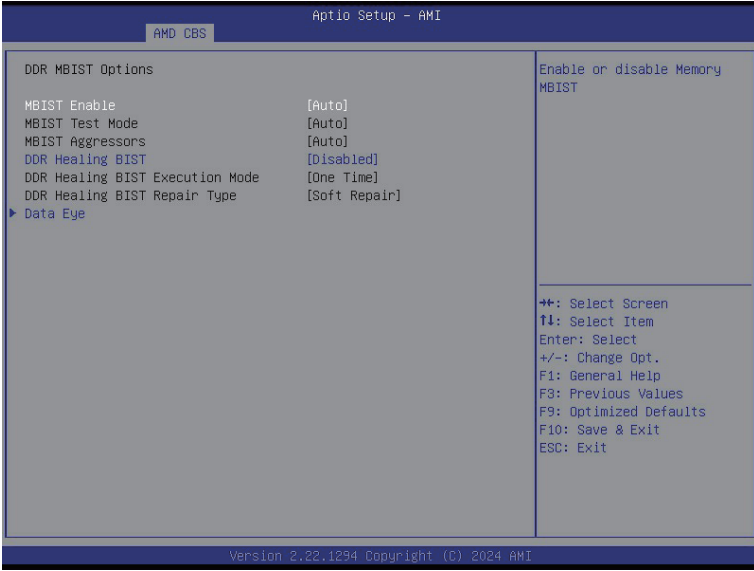

Parameter	Description
Memory Channel Disable	
Memory Channel Disable Float Power Good	Options available: Disabled, Enabled. Default setting is Disabled .
Memory Channel Disable Bitmask	
CPU0/1 Channel_#	Press [Enter] to enable/disable specific memory channel.

5-3-3-2-3 Refresh Management (RFM)

Parameter	Description
Refresh Management (RFM)	
Refresh Management	Configure Refresh Management. Options available: Enable, Disable, Auto, Force Enable. Default setting is Auto .
Adaptive Refresh Management	Options available: Auto, Disable, ARFM Level A, ARFM Level B, ARFM Level C. Default setting is Auto .
RAA Initial Management Threshold	Override Rolling Accumulated ACT Initial Management Threshold. Options available: 32, 40, 48, 56, 64, 72, 80, Auto. Default setting is Auto .
RAA Maximum Management Threshold	Override Rolling Accumulated ACT Maximum Management Threshold. Options available: 3X, 4X, 5X, 6X, Auto. Default setting is Auto .
RAA Refresh Decrement Multiplier	Override RAA Refresh Decrement Multiplier. Options available: 0.5, 1, Auto. Default setting is Auto .
DRFM	Options available: Disable, Enable, Auto. Default setting is Auto .
Bounded refresh Configuration	Options available: BRC2, BRC3, BRC4. Default setting is BRC4 .
DRFM Hash Enable	Options available: Disable, Enable, Auto. Default setting is Auto .

5-3-3-3 DDR MBIST Options

Parameter	Description
DDR MBIST Options	
MBIST Enable	Enable/Disable the Memory MBIST function. Options available: Disabled, Enabled, Auto. Default setting is Auto .
MBIST Test Mode ^(Note1)	Selects MBIST Test Mode. Interface Mode: Tests Single and Multiple CS transactions and Basic Connectivity. Data Eye Mode: Measures Voltage vs. Timing. Options available: Auto, Both, Interface Mode, Data Eye Mode. Default setting is Auto .
MBIST Aggressors ^(Note1)	Enable/Disable MBIST Aggressor test. Options available: Auto, Enabled, Disabled. Default setting is Auto .
DDR Healing BIST	Options available: Disabled, PMU Mem BIST, Self-Healing Mem BIST, PMU and Self-Healing Mem BIST. Default setting is Disabled .
DDR Healing BIST Execution Mode ^(Note2)	Options available: One Time, Every boot. Default setting is One Time .
DDR Healing BIST Repair Type ^(Note2)	For DRAM errors found in the BIOS memory BIST select the repair type. Options available: Soft Repair, Hard Repair, No Repairs -Test only. Default setting is Soft Repair .

(Note1) This item appears when **MBIST Enable** is set to **Enabled**.

Parameter	Description
Data Eye	Press [Enter] to configure advanced items.

(Note2) This item appears when **DDR Healing BIST** is defined.

5-3-3-3-1 Data Eye

Parameter	Description
Data Eye	
Pattern Select	Options available: PRBS, SSO, Both. Default setting is PRBS .
Pattern Length	Determines the pattern length. The possible options are N=3....12.
Aggressor Channel	This item helps read the aggressors channels. Options available: One Sub-Channel, Half Channels, All Channels. Default setting is All Channels .
Aggressor Static Lane Control	Enable/Disable the Aggressor Static Lane Control function. Options available: Enabled, Disabled. Default setting is Disabled .
Aggressor Static Lane Select Upper 32 bits	This item is configurable when Aggressor Static Lane Control is set to Enabled .
Aggressor Static Lane Select Lower 32 bits	This item is configurable when Aggressor Static Lane Control is set to Enabled .
Aggressor Static Lane Select ECC	This item is configurable when Aggressor Static Lane Control is set to Enabled .
Aggressor Static Lane Value	This item is configurable when Aggressor Static Lane Control is set to Enabled .
Target Static Lane Control	Enable/Disable the Target Static Lane Control function. Options available: Enabled, Disabled. Default setting is Disabled .

Parameter	Description
Target Static Lane Select Upper 32 bits	This item is configurable when Target Static Lane Control is set to Enabled .
Target Static Lane Select Lower 32 bits	This item is configurable when Target Static Lane Control is set to Enabled .
Target Static Lane Select ECC	This item is configurable when Target Static Lane Control is set to Enabled .
Target Static Lane Value	This item is configurable when Target Static Lane Control is set to Enabled .
Read Voltage Sweep Step Size	Configures the step size for read Data Eye voltage sweep. Options available: 1, 2, 4. Default setting is 1.
Read Timing Sweep Step Size	Configures the step size for read Data Eye timing sweep. Options available: 1, 2, 4. Default setting is 1.
Write Voltage Sweep Step Size	Configures the step size for write Data Eye voltage sweep. Options available: 1, 2, 4. Default setting is 1.
Write Timing Sweep Step Size	Configures the step size for write Data Eye timing sweep. Options available: 1, 2, 4. Default setting is 1.
Silent Execution	Execute MBIST Data Eye silently without ABL log output. Options available: Enabled, Disabled. Default setting is Disabled .

5-3-3-4 DDR RAS

Parameter	Description
DDR RAS	
Data Poisoning	Enable/Disable the Data Poisoning function. Options available: Auto, Enabled, Disabled. Default setting is Auto .
DRAM Boot Time Post Package Repair	Enable/Disable the DRAM Boot Time Post Package Repair function. Options available: Enable, Disable. Default setting is Disable .
DRAM Runtime Post Package Repair	Enable/Disable the DRAM Runtime Post Package Repair function. Options available: Enable, Disable. Default setting is Disable .
DRAM Post Package Repair Config Initiator	Options available: In-Band, Out of Band. Default setting is In-Band .
RCD Parity	Enable/Disable the RCD Parity function. Options available: Auto, Enabled, Disabled. Default setting is Enabled .
Write CRC	Options available: Auto, Enabled, Disabled. Default setting is Disabled .
Read CRC	Options available: Auto, Enabled, Disabled. Default setting is Disabled .
Memory Error Injection	Options available: False, True, Auto. Default setting is Auto .
EcsStatus Interrupt	Options available: False, True. Default setting is False .
ECC Configuration	Press [Enter] to configure advanced items. <ul style="list-style-type: none"> ◆ DRAM ECC Symbol Size <ul style="list-style-type: none"> – Configures the DRAM ECC Symbol Size. – Options available: Auto, x4, x16. Default setting is Auto.

Parameter	Description	
ECC Configuration (continued)	<ul style="list-style-type: none"> ◆ DRAM ECC Enable <ul style="list-style-type: none"> – Enable/Disable DRAM ECC. When set to Auto, it will set ECC to enable. – Options available: Auto, Enabled, Disabled. Default setting is Auto. ◆ DRAM UECC Retry <ul style="list-style-type: none"> – Enable/Disable DRAM UECC Retry. – Options available: Auto, Enabled, Disabled. Default setting is Disabled. ◆ Max DRAM UECC Error Replay^(Note) <ul style="list-style-type: none"> – Default setting is 8. ◆ Memory Clear <ul style="list-style-type: none"> – Options available: Auto, Enabled, Disabled. Default setting is Auto. ◆ Address XOR after ECC <ul style="list-style-type: none"> – Options available: Auto, Enabled, Disabled. Default setting is Auto. ◆ CypherText Hiding Enable <ul style="list-style-type: none"> – Options available: Disable, Enable. Default setting is Disable. 	
	DRAM Scrubbers	<p data-bbox="394 702 732 725">Press [Enter] to configure advanced items.</p> <ul style="list-style-type: none"> ◆ DRAM ECS Mode <ul style="list-style-type: none"> – Options available: Auto, AutoECS, ManualECS, DisableECS. Default setting is Auto. ◆ DRAM Redirect Scrubber Enable <ul style="list-style-type: none"> – Options available: Auto, Enabled, Disabled. Default setting is Auto. ◆ DRAM Scrub Redirection Limit <ul style="list-style-type: none"> – Options available: Auto, 8 Scrubs, 4 Scrubs, 2 Scrubs, 1 Scrub. Default setting is Auto. ◆ DRAM Scrub Time <ul style="list-style-type: none"> – Options available: Disabled, 1 hour, 4 hours, 6 hours, 8 hours, 12 hours, 16 hours, 24 hours, 48 hours. Default setting is 24 Hours. ◆ ECS Config <ul style="list-style-type: none"> – DRAM Error Threshold Count <ul style="list-style-type: none"> » Options available: Auto, ETC_4, ETC_16, ETC_64, ETC_256, ETC_1024, ETC_4096. Default setting is Auto. – DRAM ECS Count Mode <ul style="list-style-type: none"> » Options available: Auto, Row Count Mode, Code Word Count Mode. Default setting is Auto. – DRAM AutoEcs during Self Refresh <ul style="list-style-type: none"> » Options available: Auto, AutoEcs Disabled, AutoEcs Enabled. Default setting is Auto.

(Note) This item available when **DRAM UECC Retry** is set to **Enabled**.

Parameter	Description
DRAM Scrubbers (continued)	<ul style="list-style-type: none"> – DRAM ECS WriteBack Suppression » Options available: Auto, Enable, Disable. Default setting is Auto. – DRAM X4 WriteBack Suppression » Options available: Auto, Enable, Disable. Default setting is Auto.
DRAM Corrected Error Counter Enable	Configure DRAM Corrected Error Counter function. Options available: Disable, NoLeakMode, LeakMode. Default setting is LeakMode .
DRAM Corrected Error Counter Interrupt Enable	Enable SMI when DRAM corrected Error Counter count exceeds the threshold value. Options available: False, True. Default setting is True .
DRAM Corrected Counter Leak Rate	Program Rate value for DRAM Corrected Error Counter function. Default setting is 7 .
DRAM Corrected Error Counter Start Count	Program starting value for DRAM Corrected Error Counter function. Default setting is FFF5 .

5-3-3-5 DDR Bus Configuration

Parameter	Description
DDR Bus Configuration	
P-State 0 Dram ODT Impedance	<p>Press [Enter] to configure advanced items.</p> <ul style="list-style-type: none"> ◆ RTT_NOM_WR P-State 0 <ul style="list-style-type: none"> – Default setting is Auto. ◆ RTT_NOM_RD P-State 0 <ul style="list-style-type: none"> – Default setting is Auto. ◆ RTT_WR P-State 0 <ul style="list-style-type: none"> – Default setting is Auto. ◆ RTT_PARK P-State 0 <ul style="list-style-type: none"> – Default setting is Auto. ◆ DQS_RTT PARK P-State 0 <ul style="list-style-type: none"> – Default setting is Auto.
P-State 1 Dram ODT Impedance	<p>Press [Enter] to configure advanced items.</p> <ul style="list-style-type: none"> ◆ RTT_NOM_WR P-State 1 <ul style="list-style-type: none"> – Default setting is Auto. ◆ RTT_NOM_RD P-State 1 <ul style="list-style-type: none"> – Default setting is Auto. ◆ RTT_WR P-State 1 <ul style="list-style-type: none"> – Default setting is Auto. ◆ RTT_PARK P-State 1 <ul style="list-style-type: none"> – Default setting is Auto. ◆ DQS_RTT PARK P-State 1 <ul style="list-style-type: none"> – Default setting is Auto.

Parameter	Description
Processor ODT Pull Up impedance	Select the ODT impedance for all DBYTE IOs. Options available: Auto, High Impedance, 480 ohm, 240 ohm, 160 ohm, 120 ohm, 96 ohm, 80 ohm, 68.6 ohm, 60 ohm, 53.3 ohm, 48 ohm, 43.6 ohm, 40 ohm, 36.9 ohm, 34.3 ohm, 32 ohm, 30 ohm, 28.2 ohm, 26.7 ohm, 25.3 ohm. Default setting is Auto .
Processor ODT Pull Down impedance	Select the ODT pull down impedance for all DBYTE IOs. Options available: Auto, High Impedance, 480 ohm, 240 ohm, 160 ohm, 120 ohm, 96 ohm, 80 ohm, 68.6 ohm, 60 ohm, 53.3 ohm, 48 ohm, 43.6 ohm, 40 ohm, 36.9 ohm, 34.3 ohm, 32 ohm, 30 ohm, 28.2 ohm, 26.7 ohm, 25.3 ohm. Default setting is Auto .
Dram DQ drive strengths	Select the Dram Pull-up and Pull-Down Output Driver Impedance for all DQ and DMI IOs. Options available: Auto, 48 ohm, 40 ohm, 34 ohm, Default setting is Auto .

5-3-3-6 Enforce POR

Parameter	Description
Enforce POR	Decline/Accept to configure the advanced items.
Accept	
Active Memory Timing Settings ^(Note)	Active memory Timing Settings. Options available: Auto, Enabled. Default setting is Auto .
Memory Target Speed	Specifies the memory target speed in MT/s. Options available: Auto, DDR3600, DDR4000, DDR4400, DDR4800, DDR5200, DDR5600, DDR6000, DDR6400. Default setting is Auto .
SPD Timing	Press [Enter] to configure advanced items.
Non-SPD Timing	Press [Enter] to configure advanced items.

(Note) Advanced items prompt when this item is defined.

5-3-3-7 DDR Training Options

Parameter	Description
DDR Training Options	
DRAM PDA Enumerate ID Programming Mode	Specify PDA enumeration mode. Options available: Auto, Toggling PDA enumeration mode, Legacy PDA enumeration mode. Default setting is Auto .
Periodic Phase Training	Press [Enter] to configure advanced items. <ul style="list-style-type: none"> ◆ Periodic Training Mode <ul style="list-style-type: none"> – Options available: Disabled Legacy. Default setting is Legacy. ◆ Periodic Interval <ul style="list-style-type: none"> – Periodic Interval value in milli-second, in decimal. Range 100-4095 ms.

5-3-3-8 DDR Security

Parameter	Description
Security	
TSME	Enable/Disable Transparent SME. Options available: Auto, Enabled, Disabled. Default setting is Auto .
AES	Options available: AES-128, AES-256. Default setting is AES-256 .
Data Scramble	Enable/Disable Data Scrambling. Options available: Enabled, Disabled. Default setting is Enabled .
SME-MK	Options available: Enabled, Disabled. Default setting is Disabled .

5-3-3-9 DDR PMIC Configuration

Parameter	Description
DDR PMIC Configuration	
PMIC Error Reporting	Enables support for PMIC Error Reporting. Options available: Auto, False, True. Default setting is Auto .
PMIC Operation Mode	Options available: Secure Mode, Programmable Mode. Default setting is Programmable Mode .
PMIC Fault Recovery	Options available: Always, Never, Once. Default setting is Always .
PMIC SWA/SWB VDD Core	Default setting is 1100 .
PMIC SWC VDDIO	Default setting is 1100 .
PMIC SWD VPP	Default setting is 1800 .
PMIC Stagger Delay	Default setting is 5 .
Max PMIC Power On	Default setting is FF .

5-3-3-10 DDR Miscellaneous

Parameter	Description
DDR Miscellaneous	
ODTS CMD Throttle Threshold	Options available: Auto, > 85°C, > 90°C, > 95°C. Default setting is Auto .

5-3-4 NBIO Common Options

Parameter	Description
NBIO Common Options	
SMU Common Options	Press [Enter] for configuration of advanced items.
NBIO RAS Common Options	Press [Enter] for configuration of advanced items.
PCIE	Press [Enter] for configuration of advanced items.
nBif Common Options	Press [Enter] for configuration of advanced items.
IOMMU/Security	Press [Enter] for configuration of advanced items.
Enable Port Bifurcation	Press [Enter] for configuration of advanced items.
Link EQ Present Options	Press [Enter] for configuration of advanced items.
PCIe loopback Mode	Options available: Disabled, Enabled, Auto. Default setting is Auto .
Enable 2SPC (Gen 4)	Options available: Disabled, Enabled, Auto. Default setting is Auto .
Enable 2SPC (Gen 5)	Options available: Disabled, Enabled, Auto. Default setting is Auto .
Safe recovery upon a BERExceeded Error	Options available: Disabled, Enabled, Auto. Default setting is Auto .
Periodic Calibration	Options available: Disabled, Enabled, Auto. Default setting is Auto .

5-3-4-1 SMU Common Options

Parameter	Description
SMU Common Options	
Power Policy Quick Setting	Options available: Standard, Best Performance, Energy Efficient. Default setting is Standard .
TDP Control	Options available: Manual, Auto. Default setting is Auto .
PPT Control	Options available: Manual, Auto. Default setting is Auto .
Determinism Control	Selects use the fused Determinism or set customized Determinism. Options available: Manual, Auto. Default setting is Auto .
xGMI Link Width Control	Options available: Manual, Auto. Default setting is Auto .
APBDIS	Options available: 0, 1, Auto. Default setting is Auto .
Power Profile Selection	Options available: High Performance Mode, Efficiency Mode, Maximum IO Performance Mode. Default setting is High Performance Mode .
xGMI Pstate Control	Options available: Manual, Auto. Default setting is Auto .
BoostFmaxEn	Options available: Manual, Auto. Default setting is Auto .
DF PState Frequency Optimizer	Options available: Auto, Enabled, Disabled. Default setting is Auto .
DF Cstates	Options available: Disabled, Enabled, Auto. Default setting is Disabled .

Parameter	Description
CPPC	Enable/Disable the CPPC feature. Options available: Disabled, Enabled, Auto. Default setting is Auto .
HSMP Support	Enable/Disable the HSMP support. Options available: Disabled, Enabled, Auto. Default setting is Auto .
SVI3 SVC Speed Control	Options available: Auto, Manual. Default setting is Auto .
3D V-Cache	Options available: Auto, Disable, 1 stack, 2 stack, 4 stack. Default setting is Auto .
L3 BIST	Options available: Auto, Disable, Enable. Default setting is Auto .
Diagnostic Mode	Options available: Disabled, Enabled, Auto. Default setting is Auto .
GMI Folding	Options available: Disabled, Enabled, Auto. Default setting is Auto .
Separate CPU power plane throttling	Options available: Auto, Disable, Enable. Default setting is Auto .
DfPstate Range Support	Options available: Disable, Enable, Auto. Default setting is Auto .

5-3-4-2 NBIO RAS Common Options

Parameter	Description
NBIO RAS Common Options	
NBIO RAS Control	Options available: Disabled, MCA, Auto. Default setting is Auto .
NBIO SyncFlood Generation	The value may be used to mask SyncFlood caused by NBIO RAS options. Options available: Enabled, Disabled, Auto. Default setting is Auto .
NBIO SyncFlood Reporting	The value may be used to enable SyncFlood reporting to APML. Options available: Enabled, Disabled, Auto. Default setting is Auto .
PCIe Aer Reporting Mechanism	Selects the method of reporting AER errors from PCI Express. Options available: Firmware First, Firmware First but allow OS First, OS First, Auto. Default setting is Auto .
Edpc Control	Options available: Disabled, Enabled, Auto. Default setting is Auto .
ACS RAS Request Value	Options available: Direct Request Access Enabled, Request Blocking Enabled, Request Redirect Enabled, Auto. Default setting is Auto .
NBIO Poison Consumption	Options available: Auto, Enabled, Disabled. Default setting is Auto .
Sync Flood on PCIe Fatal Error	Options available: Auto, True, False. Default setting is Auto .
NBIO RAS Numerical Common Options	Options available: Disable, Manual. Default setting is Disable .

Parameter	Description
PCIE	
Data Object Exchange	Options available: Auto, Disabled, Enabled. Default setting is Auto .
RTM Margining Support	Options available: Auto, Disable, Enable. Default setting is Auto .
Multi Auto Speed Change On Last Rate	Options available: Auto, Disable, Enable. Default setting is Auto .
Multi Upstream Auto Speed Change	Options available: Auto, Disabled, Enabled. Default setting is Auto .
Allow Compliance	When enabled, allows the PCIe RP to enter Polling.Compliance state. Options available: Auto, Disable, Enable. Default setting is Auto .
EQ Bypass To Highest Rate	Options available: Disable, Enable, Auto. Default setting is Auto .
Data Link Feature Cap	Options available: Auto, Disabled, Enabled. Default setting is Auto .
SRIS	Options available: Auto, Disable, Enable. Default setting is Auto .
ACS Enable	Enable/Disable ACS. Options available: Enable, Disabled, Auto. Default setting is Auto .
PCIe Ten Bit Tag Support	Enable/Disable PCIe ten bit tags for supported devices. (Auto=Disabled) Options available: Disable, Enable, Auto. Default setting is Auto .
PCIe ARI Enumeration	ARI Forwarding Enable for each downstream port. Options available: Disable, Enable, Auto. Default setting is Auto .
PCIe ARI Support	Enable/Disable Alternative Routing-ID Interpretation. Options available: Disable, Enable, Auto. Default setting is Auto .
Presence Detect Select mode	Controls the Presence Detect Select mode. Options available: OR, AND, Auto. Default setting is Auto .
Hot Plug Handling mode	Controls the Hot Plug Handling mode. Options available: OS First, Firmware First/EDR if OS supports, Firmware First but allow OS First, System Firmware Intermediary, Auto. Default setting is Auto .
Presence Detect State Settle Time	Options available: True, False, Auto. Default setting is Auto .
Hot Plug Port Settle Time	Configure Hot Plug Port Settle Time.
Hot Plug Support	Options available: Auto, Disabled. Default setting is Auto .
Early Link Speed	Configures Early Link Speed. Options available: Auto, Gen1, Gen2. Default setting is Auto .
Enable AER Cap	Enable/Disable Advanced Error Reporting Capability. Options available: Enable, Disabled, Auto. Default setting is Auto .

Parameter	Description
PCIe Link Speed Capability	Options available: Maximum speed, Gen1, Gen2, Gen3, Gen4, Gen5, Auto. Default setting is Auto .
PCIe Target Link Speed	Options available: Maximum Speed, GEN1, GEN2, GEN3, GEN4, GEN5, Auto. Default setting is Auto .
ASPM Control	Options available: Disable, L0s, L1, Auto. Default setting is Auto .
MCTP Enable	Options available: Enable, Disable, Auto. Default setting is Disable .
Non-PCIe Compliant Support	Options available: Enable, Disable, Auto. Default setting is Auto .
Limit hotplug devices to PCIe boot speed	Options available: Enable, Disable, Auto. Default setting is Auto .

5-3-4-4 nBif Common Options

Parameter	Description
RCC_DEVO	<ul style="list-style-type: none"> ◆ ACS_Rcc_Dev0 – Options available: Auto, Disabled, Enabled. Default setting is Auto. ◆ AER_Rcc_Dev0 – Options available: Auto, Disabled, Enabled. Default setting is Auto. ◆ DllEnableStrap1 – Options available: Auto, Disabled, Enabled. Default setting is Auto. ◆ Phy16GTStrap1 – Options available: Auto, Disabled, Enabled. Default setting is Auto. ◆ MarginEnStrap1 – Options available: Auto, Disabled, Enabled. Default setting is Auto. ◆ SourceValStrap5 – Options available: Auto, Disabled, Enabled. Default setting is Auto. ◆ TranslationalBlockingStrap5 – Options available: Auto, Disabled, Enabled. Default setting is Auto. ◆ P2pReq_ACS_Control – Options available: Auto, Disabled, Enabled. Default setting is Auto. ◆ P2pCompStrap5 – Options available: Auto, Disabled, Enabled. Default setting is Auto. ◆ UpstreamFwdStrap5 – Options available: Auto, Disabled, Enabled. Default setting is Auto.

Parameter	Description
RCC_DEV0 (continued)	<ul style="list-style-type: none"> ◆ P2PEgressStrap5 – Options available: Auto, Disabled, Enabled. Default setting is Auto. ◆ DirectTranslatedStrap5 – Options available: Auto, Disabled, Enabled. Default setting is Auto. ◆ SsidEnStrap5 – Options available: Auto, Disabled, Enabled. Default setting is Auto. ◆ PriEnPageReq – Options available: Auto, Disabled, Enabled. Default setting is Auto. ◆ PriResetPageReq – Options available: Auto, Disabled, Enabled. Default setting is Auto. ◆ SourceVal ACS cntl – Options available: Auto, Disabled, Enabled. Default setting is Auto. ◆ TranslationalBlocking ACS Control – Options available: Auto, Disabled, Enabled. Default setting is Auto. ◆ P2pComp ACS Control – Options available: Auto, Disabled, Enabled. Default setting is Auto. ◆ UpstreamFwd ACS Control – Options available: Auto, Disabled, Enabled. Default setting is Auto. ◆ P2PEgress ACS Control – Options available: Auto, Disabled, Enabled. Default setting is Auto. ◆ P2pReqStrap5 – Options available: Auto, Disabled, Enabled. Default setting is Auto. ◆ E2E_PREFIX – Options available: Auto, Disabled, Enabled. Default setting is Auto. ◆ EXTENDED_FMT – Options available: Auto, Disabled, Enabled. Default setting is Auto. ◆ AtomicRoutingStrap5 – Options available: Auto, Disabled, Enabled. Default setting is Auto.

5-3-4-5 IOMMU/Security

Parameter	Description
SEV-SNP Support	Enable/Disable the SEV-SNP support. Options available: Disable, Enable. Default setting is Disable .
DRTM Memory Reservation	Enable/Disable DRTM Memory reservation. Options available: Disabled, Enabled, Auto. Default setting is Auto .
DRTM Virtual Device Support	Enable/Disable DRTM ACPI virtual device. Options available: Disabled, Enabled, Auto. Default setting is Auto .
DMA Protection	Enable/Disable DMA remap support in IVRS IVinfo Field. Options available: Auto, Enabled, Disabled. Default setting is Auto .
IOMMU	Enable/Disable the IOMMU function. Options available: Disabled, Enabled. Default setting is Enabled .
DMAR Support	Enable/Disable DMAR system protection during POST. Options available: Disabled, Enabled, Auto. Default setting is Auto .

5-3-4-6 Enable Port Bifurcation

Parameter	Description
Enable Bifurcation ^(Note)	Options available: Disable, Enable, Auto. Default setting is Auto .
Socket0 Slot Info Override	
Socket1 Slot Info Override	

(Note) Advanced items prompt when this item is defined.

5-3-4-7 Link EQ Preset Options

Parameter	Description
GEN3/4/5	<p>Press [Enter] to configure advanced items.</p> <ul style="list-style-type: none"> ◆ Preset Search Mask Configuration <ul style="list-style-type: none"> – Options available: Custom, Auto. Default setting is Auto.

5-3-5 FCH Common Options

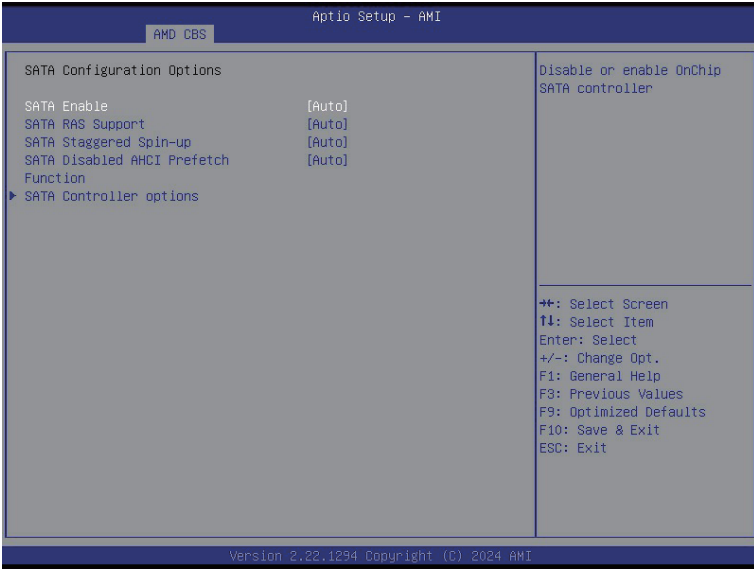

Parameter	Description
FCH Common Options	
I3C/I2C Configuration Options	Press [Enter] for configuration of advanced items.
SATA Configuration Options	Press [Enter] for configuration of advanced items.
USB Configuration Options	Press [Enter] for configuration of advanced items.
AC Power Loss Options	Press [Enter] for configuration of advanced items.
Uart Configuration Options	Press [Enter] for configuration of advanced items.
FCH RAS Options	Press [Enter] for configuration of advanced items.
Miscellaneous Options	Press [Enter] for configuration of advanced items.

5-3-5-1 I3C/I2C Configuration Options

Parameter	Description
I3C/I2C Configuration Options	
I3C/I2C 0/1/2/3 Enable	Options available: Both Disabled, I3C Enabled, I2C Enabled, Auto. Default setting is Auto .
I2C 4/5 Enable	Options available: Disabled, Enabled, Auto. Default setting is Auto .
Release SPD Host Control	Options available: Disabled, Enabled. Default setting is Disabled .
PMFW Poll DDR5 Telemetry	Options available: Disabled, Enabled. Default setting is Enabled .
Ixc Telemetry Ports Fence Control	Options available: Disabled, Enabled. Default setting is Disabled .
I2C SDA Hold Override	Options available: Disabled, Enabled, Auto. Default setting is Auto .
APML SB-TSI & RMI Mode	Options available: I3C, I2C. Default setting is I3C .
I3C Mode Speed	Options available: SDR2(6MHz), SDR0(12.5MHz), Auto. Default setting is Auto .
I3C Push Pull HCNT Value	SCL push-pull High count for I3C transfers targeted to I3C devices.
I3C SDA Hold Value	Specifies I3C SDA Hold value.
I3C SDA Hold Override	Override I3C SDA Hold value. Options available: Disabled, Enabled, Auto. Default setting is Auto .

5-3-5-2 SATA Configuration Options

Parameter	Description
SATA Configuration Options	
SATA Enable	Enable/Disable OnChip SATA controller. Options available: Disabled, Enabled, Auto. Default setting is Auto .
SATA RAS Support	Options available: Disabled, Enabled, Auto. Default setting is Auto .
SATA Staggered Spin-up	Options available: Disabled, Enabled, Auto. Default setting is Auto .
SATA Disabled AHCI Prefetch Function	Options available: Disabled, Enabled, Auto. Default setting is Auto .
SATA Controller options	Press [Enter] for configuration of advanced items. <ul style="list-style-type: none"> ◆ SATA Controller Enable ◆ SATA Controller eSATA ◆ SATA Controller DevSlp ◆ SATA Controller SGPIO

5-3-5-3 USB Configuration Options

Parameter	Description
USB Configuration Options	
XHCI Controller0/1 enable	Enable/Disable USB controller. Options available: Enabled, Disabled, Auto. Default setting is Auto .
MCM USB enable	Press [Enter] for configuration of advanced items. <ul style="list-style-type: none"> ◆ XHCI2/ XHCI3 enable (Socket1) <ul style="list-style-type: none"> – Options available: Enabled, Disabled, Auto. Default setting is Auto.

5-3-5-4 AC Power Loss Options

Parameter	Description
AC Power Loss Options	
AC Loss Control	Selects the AC Loss Control Method. Options available: Power Off, Power On, Last State. Default setting is Last State .
Set FCH Power failed shadow in ABL	Enable/Disable set FCH power failed shadow by AC Loss control policy in ABL. Options available: Enabled, Disabled, Auto. Default setting is Auto .

5-3-5-5 Uart Configuration Options

Parameter	Description
Uart Configuration Options	
Uart 0/1/2/3 Enable	Options available: Disabled, Enabled, Auto. Default setting is Auto .

5-3-5-6 FCH RAS Options

Parameter	Description
FCH RAS Options	
ALink RAS Support	Enable/Disable the ALink RAS Support. Options available: Disabled, Enabled, Auto. Default setting is Auto .
Reset After Sync-Flood	Enables AB to forward downstream sync-flood message to system controller. Options available: Enable, Disable, Auto. Default setting is Auto .

5-3-5-7 Miscellaneous Options

Parameter	Description
Miscellaneous Options	
FCH Spread Spectrum	Select whether or not Enable the Spread Spectrum Feature. Options available: Disabled, Enabled, Auto. Default setting is Disabled .
Boot Timer Enable	Enable/Disable Boot Timer. Options available: Disabled, Enabled, Auto. Default setting is Auto .

5-3-6 SOC Miscellaneous Control

Parameter	Description
SOC Miscellaneous Control	
ABL Console Out Control ^(Note)	Enable/Disable the ConsoleOut function for ABL. Options available: Disable, Enable, Auto. Default setting is Auto .
ABL Console Out Serial Port ^(Note)	Options available: eSPI, SOC UART0, SOC UART1, Auto. Default setting is Auto .
ABL Console Out Serial Port IO	Options available: 0x3F8, 0x2F8, 0x3E8, 0x2E8, Auto. Default setting is Auto .
ABL Serial port IO customized enabled	Options available: Disabled, Enabled. Default setting is Disabled .
ABL Basic Console Out Control	Enable/Disable the Basic ConsoleOut function for ABL. Options available: Disable, Enable, Auto. Default setting is Auto .
ABL PMU message Control	To Control the total number of PMU debug messages. Options available: Auto, Detailed debug message, Coarse debug message, Stage completion, Assertion messages, Firmware completion message only. Default setting is Auto .
ABL Memory Population message Control	Options available: Warning message, Fatal error. Default setting is Warning message .

(Note) Advanced items are configurable when this item is defined.

Parameter	Description
PSP error injection support	Options available: False, True. Default setting is False .
Firmware Anti-rollback (FAR)	Press [Enter] for configuration of advanced items. <ul style="list-style-type: none"> ◆ FAR enforcement state <ul style="list-style-type: none"> – Default setting is Enabled. ◆ SPL value in the CPU Fuse ◆ SPL value in the SPL table ◆ FAR Switch <ul style="list-style-type: none"> – Options available: Disabled, Enabled, Auto. Default setting is Auto.

5-3-7 CXL Common Options

Parameter	Description
CXL Common Options	
CXL Control	Options available: Auto, Enabled, Disabled. Default setting is Auto .
CXL Physical Addressing	Options available: Normalized address, System address, Auto. Default setting is Auto .
CXL Memory Attribute	Options available: Auto, Enabled, Disabled. Default setting is Auto .
CXL Encryption	Options available: Enabled, Disabled. Default setting is Disabled .
CXL DVSEC Lock	Options available: Auto, Enabled, Disabled. Default setting is Auto .
CXL HDM Decoder Lock on Commit	Options available: Auto, Enabled, Disabled. Default setting is Auto .
Temp Gen5 Advertisement	Options available: Disabled, Enabled, Auto. Default setting is Auto .
Sync Header Bypass	Options available: Auto, Enabled, Disabled. Default setting is Auto .
Sync Header Bypass Compatibility Mode	Options available: Auto, Enabled, Disabled. Default setting is Auto .

Parameter	Description
CXL RAS	<p>Press [Enter] for configuration of advanced items.</p> <ul style="list-style-type: none"> ◆ CXL Protocol Error Reporting <ul style="list-style-type: none"> – Options available: Disabled, SameAsPcieAer, ForceAerFwFirstIfCxlPresent. Default setting is SameAsPcieAer. ◆ CXL Component Error Reporting <ul style="list-style-type: none"> – Options available: Allow OS First, Force FW-First, Debug FW-First. Default setting is Debug FW-First. ◆ CXL Root Port Isolation <ul style="list-style-type: none"> – Options available: Auto, Enabled, Disabled. Default setting is Auto. ◆ CXL Root Port Isolation FW Notification. <ul style="list-style-type: none"> – Options available: Auto, Enabled, Disabled. Default setting is Auto.
CXL Memory Online/Offline	<p>All 4 Plink sots support memory online/offline. Only slot4 of Amber supports hot plug CXL memory interleaving automatically disabled globally when this CBS is enabled.</p> <p>Options available: Enabled, Disabled. Default setting is Disabled.</p>
Override CXL Memory Size	<p>Options available: 32GB, 64GB, 128GB, Auto. Default setting is Auto.</p>

5-4 AMD PBS Menu

AMD PBS Option menu displays submenu options for configuring the function of AMD PBS. Select a submenu item, then press [Enter] to access the related submenu screen.

Parameter	Description
AMD Variable Protection	Protect some AMD specific variables for CBS, PBS and AOD. If locked, some utilities like RU that modify variable at runtime do not work. Options available: Disabled, Enabled. Default setting is Disabled .
RAS	Press [Enter] for configuration of advanced items.
Range Encryption	Press [Enter] for configuration of advanced items. <ul style="list-style-type: none"> ◆ Range1/2/3/4/5/6/7 <ul style="list-style-type: none"> – Configure the Range 1/2/3/4/5/6/7 Memory Base. – Configure the Range 1/2/3/4/5/6/7 Memory Limit/Size. ◆ Start Range Encryption

5-4-1 RAS

Parameter	Description
RAS Periodic SMI Control	Enable/Disable the Periodic SMI for polling [MCA Threshold] error. Options available: Disabled, Enabled. Default setting is Enabled .
SMI Threshold	Configures the SMI Threshold value.
SMI Scale	Configures the SMI Scale value.
SMI Scale Unit	Defines the unit of time scale. Options available: millisecond, second, minute. Default setting is millisecond .
SMI Period	Configures the SMI Period.
GHEs Notify Type	Selects the Notification type for deferred/ corrected errors. Options available: Polled, SCI. Default setting is Polled .
GHEs UnCorr Notify Type	Selects the Notification type for uncorrected errors. Options available: Polled, NMI. Default setting is NMI .
PCIe GHEs Notify Type	Selects the Notification type for PCIe corrected errors. Options available: Polled, SCI. Default setting is Polled .
PCIe UnCorr GHEs Notify Type	Selects the Notification type for PCIe uncorrected errors. Options available: Polled, NMI. Default setting is NMI .
PCIe Root Port Corr Err Mask Reg	Initialize the PCIe AER Corrected Error Mask register of Root Port.

Parameter	Description
PCIe Root Port UnCorr Err Mask Reg	Initialize the PCIe AER Uncorrected Error Mask register of Root Port.
PCIe Root Port UnCorr Err Sev Reg	Initialize the PCIe AER Uncorrected Error Severity register of Root Port.
PCIe Device Corr Err Mask Reg	Initialize the PCIe AER Corrected Error Mask register of PCIe device.
PCIe Device UnCorr Err Mask Reg	Initialize the PCIe AER Uncorrected Error Mask register of PCIe device.
PCIe Device UnCorr Err Sev Reg	Initialize the PCIe AER Uncorrected Error Severity register of PCIe device.
CXL DP CIE Mask Enable	Options available: Disabled, Enabled. Default setting is Enabled .
DRAM Hard Post Package Repair	This feature allows spare DRAM rows to replace malfunctioning rows via an in-field repair mechanism. Options available: Disabled, Enabled. Default setting is Disabled .
HEST DMC Structure Support	HEST DMC (Deferred Machine Check) Structure Support. Options available: Disabled, Enabled. Default setting is Disabled .
CXL Error Report Support	Enable/Disable CXL Error Reporting. Options available: Disabled, Enabled. Default setting is Disabled .

5-5 Chipset Setup Menu

Chipset Setup menu displays submenu options for configuring the function of the North Bridge. Select a submenu item, then press <Enter> to access the related submenu screen.

Parameter	Description
PCIe Compliance Mode	Options available: Off, On. Default setting is Off .
Program All VR	Enable/Disable program all VR on MB. Options available: Disabled, Enabled. Default setting is Enabled .
Power Button 1s shutdown	Enable/Disable Press power button 1 sec shutdown. Options available: Disabled, Enabled. Default setting is Enabled .
North Bridge	Press [Enter] for configuration of advanced items.

5-5-1 North Bridge

Parameter	Description
North Bridge Configuration	
Memory Information	
Total Memory	Displays the total memory information.
CPU 0/1 Information	Press [Enter] to view information related to CPU 0/1.

5-6 Server Management Menu

Parameter	Description
FRB-2 Timer	Enable/Disable FRB-2 timer (POST timer). Default setting is Enabled .
FRB-2 Timer timeout	Configures the FRB-2 Timer timeout. Default setting is 20 minutes .
FRB-2 Timer Policy	Configures the FRB-2 Timer policy. Options available: Do Nothing, Reset, Power Down, Power Cycle. Default setting is Do Nothing .
OS Watchdog Timer	Enable/Disable OS Watchdog Timer function. Options available: Enabled, Disabled. Default setting is Disabled .
OS Wtd Timer Timeout ^(Note)	Configures OS Watchdog Timer. Options available: 5 minutes, 10 minutes, 15 minutes, 20 minutes. Default setting is 10 minutes .
OS Wtd Timer Policy ^(Note)	Configure OS Watchdog Timer Policy. Options available: Do Nothing, Reset, Power Down, Power Cycle. Default setting is Reset .
Wait BMC Ready	Post wait BMC ready and reboot system. Options available: Disabled, 2 minutes, 4 minutes, 6 minutes. Default setting is 2 minutes .

(Note) This item is configurable when **OS Watchdog Timer** is set to **Enabled**.

Parameter	Description
System Event Log	Press [Enter] to configure advanced items.
View FRU Information	Press [Enter] to view the FRU information.
BMC VLAN configuration	Press [Enter] to configure advanced items.
BMC network configuration	Press [Enter] to configure advanced items.
IPv6 BMC Network Configuration	Press [Enter] to configure advanced items.

5-6-1 System Event Log

Parameter	Description
Enabling / Disabling Options	
SEL Components	Change this item to enable or disable all features of System Event Logging during boot. Options available: Disabled, Enabled. Default setting is Enabled .
Erasing Settings	
Erase SEL	Choose options for erasing SEL. Options available: No/Yes, On next reset/Yes, On every reset. Default setting is No .
When SEL is Full	Choose options for reactions to a full SEL. Options available: Do Nothing, Erase Immediately. Default setting is Do Nothing .
Custom EFI Logging Options	
Log EFI Status Codes	Enable/Disable the logging of EFI Status Codes (if not already converted to legacy). Options available: Disabled, Both, Error code, Progress code. Default setting is Error code .

5-6-2 View FRU Information

The FRU page is a simple display page for basic system ID information, as well as System product information. Items on this window are non-configurable.

(Note) The model name will vary depends on the product you purchased

5-6-3 BMC VLAN Configuration

Parameter	Description
BMC VLAN Configuration	
BMC VLAN ID	Select to configure BMC VLAN ID. The valid range is from 0 to 4094. When set to 0, BMC VLAN ID will be disabled.
BMC VLAN Priority	Select to configure BMC VLAN Priority. The valid range is from 0 to 7. When BMC VLAN ID is set to 0, BMC VLAN Priority will not be selected.

5-6-4 BMC Network Configuration

Parameter	Description
Select NCSI and Dedicated LAN	Options available: Do Nothing, Mode1 (Dedicated), Mode2 (NCSI), Mode3 (Failover). Default setting is Do Nothing .
Lan Channel 1	
Configuration Address source	Selects to configure LAN channel parameters statically or dynamically (DHCP). Do nothing option will not modify any BMC network parameters during BIOS phase. Options available: Unspecified, Static, DynamicBmcDhcp. Default setting is DynamicBmcDhcp .
Station IP address	Displays IP Address information.
Subnet mask	Displays Subnet Mask information. Please note that the IP address must be in three digitals, for example, 192.168.000.001.
Router IP address	Displays the Router IP Address information.
Station MAC address	Displays the MAC Address information.
VLAN Support	Set BMC to enable/disable VLAN support. Options available: Enabled, Disabled. Default setting is Disabled .
Real-time get BMC network address	Press [Enter] will set LAN mode and Address source and then get IP, Subnet, Gateway and MAC address.

5-6-5 IPv6 BMC Network Configuration

Parameter	Description
IPv6 BMC network configuration	
IPv6 BMC Lan Channel 1	
IPv6 BMC Lan Option	Enable/Disable IPv6 BMC LAN channel function. When this item is disabled, the system will not modify any BMC network during BIOS phase. Options available: Unspecified, Disable, Enable. Default setting is Enable .
IPv6 BMC Lan IP Address Source	Selects to configure LAN channel parameters statically or dynamically (by BIOS or BMC). Options available: Unspecified, Static, Dynamic-Obtained by BMC running DHCP. Default setting is Dynamic-Obtained by BMC running DHCP .
IPv6 BMC Lan IP Address/Prefix Length	Check if the IPv6 BMC LAN IP address matches those displayed on the screen.

5-7 Security Menu

The Security menu allows you to safeguard and protect the system from unauthorized use by setting up access passwords.

There are two types of passwords that you can set:

- Administrator Password
Entering this password will allow the user to access and change all settings in the Setup Utility.
- User Password
Entering this password will restrict a user's access to the Setup menus. To enable or disable this field, a Administrator Password must first be set. A user can only access and modify the System Time, System Date, and Set User Password fields.

Parameter	Description
Administrator Password	Press [Enter] to configure the administrator password.
User Password	Press [Enter] to configure the user password.
Secure Boot	Press [Enter] to configure advanced items.

5-7-1 Secure Boot

The Secure Boot feature is applicable if supported by your Operating System. If your Operating System is not supporting Secure Boot, the system will hang when starting the Operating System.

Parameter	Description
System Mode	Displays if the system is in User mode or Setup mode.
Secure Boot	Enable/ Disable the Secure Boot function. Options available: Enabled, Disabled. Default setting is Disabled .
Secure Boot Mode ^(Note)	Secure Boot requires all the applications that are running during the booting process to be pre-signed with valid digital certificates. This way, the system knows all files being loaded before the Operating System loads to the login screen have not been tampered with. When set to Standard, it will automatically load the Secure Boot keys from the BIOS databases. When set to Custom, you can customize the Secure Boot settings and manually load its keys from the BIOS database. Options available: Standard, Custom. Default setting is Standard .
Restore Factory Keys	Forces the system to user mode and installs factory default Secure Boot key database.
Reset To Setup Mode	Press [Enter] to reset the system mode to Setup mode.
Enter Audit Mode	Press [Enter] to set the system mode to audit mode.

(Note) Advanced items prompt when this item is set to **Custom**.

Parameter	Description
Key Management	<p data-bbox="335 156 665 180">Press [Enter] to configure advanced items.</p> <p data-bbox="335 185 941 235">Please note that this item is configurable when Secure Boot Mode is set to Custom.</p> <ul style="list-style-type: none"> <li data-bbox="335 243 946 352">◆ Factory Key Provision <ul style="list-style-type: none"> <li data-bbox="367 266 946 321">– Allows to provision factory default Secure Boot keys when system is in Setup Mode. <li data-bbox="367 326 909 352">– Options available: Enabled, Disabled. 5-8 Boot Menu

The Boot menu allows you to set the drive priority during system boot-up. BIOS setup will display an error message if the legacy drive(s) specified is not bootable.

Parameter	Description
Boot Configuration	
Setup Prompt Timeout	Number of seconds to wait for setup activation key. 65535 (0xFFFF) means indefinite waiting. Press the numeric keys to input the desired values.
Bootup NumLock State	Enable/Disable the Bootup NumLock function. Options available: On, Off. Default setting is On .
Quiet Boot	Enable/Disable showing the logo during POST. Options available: Enabled, Disabled. Default setting is Enabled .
Setup Flash	Press [Enter] to run setup flash.
Dump full Setup Data	Press [Enter] to dump full setup data to file.
Dump non-default Setup Data	Press [Enter] to dump non-default setup data to file.
Restore Setup Data	Press [Enter] to restore setup data from file (cJson format).
Fast Boot	Options available: Disabled, Enabled. Default setting is Disabled .

Parameter	Description
FIXED BOOT ORDER Priorities	
Boot Option #1 / #2 / #3 / #4 / #5	<p>Press [Enter] to configure the boot priority. By default, the server searches for boot devices in the following sequence:</p> <ol style="list-style-type: none"> 1. Hard drive. 2. CD-COM/DVD drive. 3. USB device. 4. Network. 5. UEFI.
UEFI NETWORK Drive BBS Priorities	Press [Enter] to configure the boot priority.
UEFI Application Boot Priorities	Press [Enter] to configure the boot priority.

5-9 Save & Exit Menu

The Save & Exit menu displays the various options to quit from the BIOS setup. Highlight any of the exit options then press <Enter>.

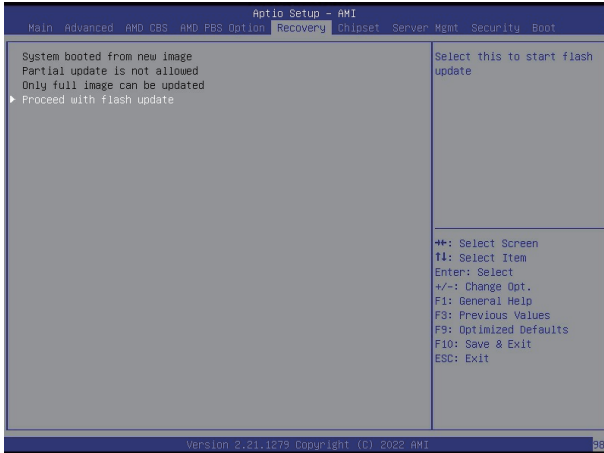

Parameter	Description
Save Options	
Save Changes and Exit	Saves changes made and closes the BIOS setup. Options available: Yes, No.
Discard Changes and Exit	Discards changes made and exits the BIOS setup. Options available: Yes, No.
Save Changes	Saves changes done so far to any of the setup options. Options available: Yes, No.
Default Options	
Restore Defaults	Loads the default settings for all BIOS setup parameters. Setup Defaults are quite demanding in terms of resources consumption. If you are using low-speed memory chips or other kinds of low-performance components and you choose to load these settings, the system might not function properly. Options available: Yes, No.
Boot Override	Press [Enter] to configure the device as the boot-up drive.
Launch EFI Shell from filesystem device	Attempts to Launch EFI Shell application (Shell.efi) from one of the available file system devices.

5-10 BIOS Recovery

The system has an embedded recovery technique. In the event that the BIOS becomes corrupt the boot block can be used to restore the BIOS to a working state. To restore your BIOS, please follow the instructions listed below:

Recovery Instruction:

1. Copy the XXX.rom to USB diskette.
2. Setting BIOS Recovery jump to enabled status.
3. Boot into BIOS recovery.
4. Run Proceed with flash update.
5. BIOS updated.

5-11 BIOS POST Beep code (AMI standard)

5-11-1 PEI Beep Codes

# of Beeps	Description
1	Memory not Installed.
1	Memory was installed twice (InstallPeiMemory routine in PEI Core called twice)
2	Recovery started
3	DXE IPL was not found
3	DXE Core Firmware Volume was not found
4	Recovery failed
4	S3 Resume failed
7	Reset PPI is not available

5-11-2 DXE Beep Codes

# of Beeps	Description
1	Invalid password
4	Some of the Architectural Protocols are not available
5	No Console Output Devices are found
5	No Console Input Devices are found
6	Flash update is failed
7	Reset protocol is not available
8	Platform PCI resource requirements cannot be met
