# **GIGABYTE**<sup>™</sup> R263-P30-AAH1

Rack Arm Server - AmpereOne® Family 2U UP 12-Bay Gen5 NVMe/SATA/SAS-4 (4 x NVMe)

User Manual

Rev. 1.0

#### **Copyright**

© 2024 Giga Computing Technology CO., LTD. All rights reserved. The trademarks mentioned in this manual are legally registered to their respective owners.

#### **Disclaimer**

Information in this manual is protected by copyright laws and is the property of Giga Computing. Changes to the specifications and features in this manual may be made by Giga Computing without prior notice. No part of this manual may be reproduced, copied, translated, transmitted, or published in any form or by any means without Giga Computing's prior written permission.

#### **Documentation Classifications**

In order to assist in the use of this product, Giga Computing provides the following types of documentation:

- User Manual: detailed information & steps about the installation, configuration and use of this
  product (e.g. motherboard, server barebones), covering hardware and BIOS.
- User Guide: detailed information about the installation & use of an add-on hardware or software component (e.g. BMC firmware, rail-kit) compatible with this product.
- Quick Installation Guide: a short guide with visual diagrams that you can reference easily for installation purposes of this product (e.g. motherboard, server barebones).

Please see the support section of the online product page to check the current availability of these documents.

#### For More Information

For related product specifications, the latest firmware and software, and other information please visit our website at http://www.gigabyte.com/Enterprise

For GIGABYTE distributors and resellers, additional sales & marketing materials are available from our reseller portal: http://reseller.b2b.gigabyte.com

For further technical assistance, please contact your GIGABYTE representative or visit https://esupport.gigabyte.com/ to create a new support ticket

For any general sales or marketing enquiries, you may also message GIGABYTE server directly by email: server.grp@gigabyte.com

#### Conventions

The following conventions are used in this user's guide:

NOTE!           Pieces of additional           information related to the current topic.			
	CAUTION! Precautionary measures to avoid possible hardware or software problems.		
	WARNING! Alerts to any damage that might result from doing or not doing specific actions.		

#### Server Warnings and Cautions

Before installing a server, be sure that you understand the following warnings and cautions.

### WARNING!

#### To reduce the risk of electric shock or damage to the equipment:

- Do not disable the power cord grounding plug. The grounding plug is an important safety feature.
- Plug the power cord into a grounded (earthed) electrical outlet that is easily accessible at all times.
- · Unplug the power cord from the power supply to disconnect power to the equipment.
- Do not route the power cord where it can be walked on or pinched by items placed against it. Pay particular attention to the plug, electrical outlet, and the point where the cord extends from the server.

## 

To reduce the risk of personal injury from hot surfaces, allow the drives and the internal system components to cool before touching them.

## WARNING!

This server is equipped with high speed fans. Keep away from hazardous moving fan blades during servicing.

## 

The equipment should only be repaired, maintained or replaced by skilled personnel.

- Do not operate the server for long periods with the access panel open or removed. Operating the server in this manner results in improper airflow and improper cooling that can lead to thermal damage.
- Danger of explosion if battery is incorrectly replaced.
- · Replace battery with the same or equivalent type recommended by the manufacturer.
- · Dispose of used batteries according to the manufacturer's instructions.

Risk of explosion if battery is replaced incorrectly or with an incorrect type. Replace the battery only with the same or equivalent type recommended by the manufacturer. Dispose of used batteries according to the manufacturer's instructions.

ESD CAN DAMAGE DRIVES, BOARDS, AND OTHER PARTS. WE RECOMMEND THAT YOU PERFORM ALL PROCEDURES AT AN ESD WORKSTATION. IF ONE IS NOT AVAILABLE, PROVIDE SOME ESD PROTECTION BY WEARING AN ANTI-STATIC WRIST STRAP AT-TACHED TO CHASSIS GROUND -- ANY UNPAINTED METAL SURFACE -- ON YOUR SERVER WHEN HANDLING PARTS.

Always handle boards carefully, they can be extremely sensitive to ESD. Hold boards only by their edges without touching any components or connectors. After removing a board from its protective ESD bag or from the system, place the board component side up on a grounded, static free surface. Use a conductive foam pad if available but not the ESD bag. Do not slide the board over any surface.

System power on/off: To service components within the server, please ensure the power has been disconnected.

e.g. Remove the node from the server chassis (to disconnect power) or disconnect the power from the server chassis.

Make sure the system is removed from the rack before opening the chassis, adding, or removing any non hot-plug components.

Hazardous conditions, devices and cables: Hazardous electrical conditions may be present on power, telephone, and communication cables. Turn off the system chassis and disconnect the cables attached to the system before servicing the chassis. Otherwise, personal injury or equipment damage can result.

**Electrostatic discharge (ESD) and ESD protection:** ESD can damage drives, boards, and other parts. We recommend that you perform all procedures in this chapter only at an ESD work-station. If one is not available, provide some ESD protection by wearing an antistatic wrist strap attached to chassis ground (any unpainted metal surface on the server) when handling parts.

**ESD** and handling boards: Always handle boards carefully. They can be extremely sensi-tive to electrostatic discharge (ESD). Hold boards only by their edges. After removing a board from its protective wrapper or from the system, place the board component side up on a grounded, static free surface. Use a conductive foam pad if available but not the board wrapper. Do not slide board over any surface.

**Installing or removing jumpers:** A jumper is a small plastic encased conductor that slips over two jumper pins. Some jumpers have a small tab on top that can be gripped with fin-gertips or with a pair of fine needle nosed pliers. If the jumpers do not have such a tab, take care when using needle nosed pliers to remove or install a jumper; grip the narrow sides of the jumper with the pliers, never the wide sides. Gripping the wide sides can dam-age the contacts inside the jumper, causing intermittent problems with the function con-trolled by that jumper. Take care to grip with, but not squeeze, the pliers or other tool used to remove a jumper, or the pins on the board may bend or break.

## Chapter 1 Hardware Installation

#### **1-1** Installation Precautions

The motherboard/system contain numerous delicate electronic circuits and components which can become damaged as a result of electrostatic discharge (ESD). Prior to installation, carefully read the service guide and follow these procedures:

- Prior to installation, do not remove or break motherboard S/N (Serial Number) sticker or warranty sticker provided by your dealer. These stickers are required for warranty validation.
- Always remove the AC power by unplugging the power cord from the power outlet before installing or removing the motherboard or other hardware components.
- When connecting hardware components to the internal connectors on the motherboard, make sure they are connected tightly and securely.
- When handling the motherboard, avoid touching any metal leads or connectors.
- It is best to wear an electrostatic discharge (ESD) wrist strap when handling electronic components such as a motherboard, CPU or memory. If you do not have an ESD wrist strap, keep your hands dry and first touch a metal object to eliminate static electricity.
- Prior to installing the motherboard, please have it on top of an antistatic pad or within an electrostatic shielding container.
- Before unplugging the power supply cable from the motherboard, make sure the power supply has been turned off.
- Before turning on the power, make sure the power supply voltage has been set according to the local voltage standard.
- Before using the product, please verify that all cables and power connectors of your hardware components are connected.
- To prevent damage to the motherboard, do not allow screws to come in contact with the motherboard circuit or its components.
- Make sure there are no leftover screws or metal components placed on the motherboard or within the computer casing.
- Do not place the computer system on an uneven surface.
- Do not place the computer system in a high-temperature environment.
- Turning on the computer power during the installation process can lead to damage to system components as well as physical harm to the user.
- If you are uncertain about any installation steps or have a problem related to the use of the product, please consult a certified computer technician.

## 1-2 Product Specifications

NOTE:

We reserve the right to make any changes to the product specifications and product-related information without prior notice.

System Dimension	<ul> <li>2U</li> <li>438 (W) x 87.5 (H) x 710 (D) mm</li> </ul>
CPU	AmpereOne® Family Processors
	Up to 192 custom cores
	<ul> <li>Single processor, TDP up to 400W</li> </ul>
Socket	• 1 x LGA 5964
Chipset	System on Chip
Memory	16 x DIMM slots
	<ul> <li>DDR5 memory supported only</li> </ul>
	<ul> <li>8-Channel memory architecture</li> </ul>
	<ul> <li>RDIMM: Up to 5200 MT/s, 4400 MT/s (2R 2DPC)</li> </ul>
	Rear:
	1 x 1Gb/s LAN (1 x Intel® I210-AT)
	Support NCSI function
	<ul> <li>1 x 10/100/1000 Mbps Management LAN</li> </ul>
Video	Integrated in Aspeed® AST2600
	1 x Mini-DP
Storage	Front hot-swap:
Slorage	<ul> <li>◆ 4 x 3.5"/2.5" Gen5 NVMe/SATA/SAS-4<sup>™</sup></li> </ul>
	• 4 x 5.5 /2.5 Gens NVINe/SATA/SAS-4
	Internal M.2:
	<ul> <li>1 x M.2 (2280/22110), PCIe Gen5 x4</li> </ul>
	[1] SAS card is required to support SAS drives.
SAS	Require SAS add-in cards
RAID	Require RAID add-in cards

Expansion Slot	Riser Card CRS201C:
	<ul> <li>1 x FHHL x16 (Gen5 x16)</li> <li>1 x FHHL x16 (Gen5 x8)</li> </ul>
	Riser Card CRS201H:
	• 2 x FHHL x16 (Gen5 x16)
	2 x OCP NIC 3.0 (Gen5 x16) Supports NCSI function
Front I/O	<ul> <li>2 x USB 3.2 Gen1 ports (Type-A)</li> <li>1 x Power button with LED</li> <li>1 x ID button with LED</li> <li>1 x NMI button</li> <li>1 x Reset button</li> <li>2 x LAN activity LEDs (1 x LED disabled)</li> <li>1 x Storage activity LED</li> <li>1 x System status LED</li> </ul>
Rear I/O	<ul> <li>2 x USB 3.2 Gen1 ports (Type-A)</li> <li>1 x Mini-DP</li> <li>1 x RJ45 port</li> <li>1 x MLAN port</li> <li>1 x ID button with LED</li> </ul>
Backplane I/O	<ul> <li>Speed and bandwidth:</li> <li>PCIe Gen5 x4 or SATA 6Gb/s or SAS-4 24Gb/s</li> </ul>
Security Modules	<ul> <li>1 x TPM header with SPI interface</li> <li>Optional TPM2.0 kit: CTM010</li> </ul>

Power Supply	2 x 1300W 80 PLUS Titanium redundant power supply
	AC Input:
	<ul> <li>100-127V~/ 12A, 50-60Hz</li> </ul>
	◆ 200-240V~/ 8A, 50-60Hz
	DC Input: (Only for China)
	• 240Vdc/7A
	DC Output:
	<ul> <li>Max 1000W/ 100-127V~</li> </ul>
	<ul> <li>+12.2V/ 82A</li> </ul>
	<ul> <li>+12.2Vsb/ 3A</li> </ul>
	<ul> <li>Max 1300W/ 200-240V~ or 240Vdc Input</li> </ul>

## 1-3 System Block Diagram

## Chapter 2 System Appearance

2-1 Front View

0					2
öð	HDD0	HDD3	HDD6	HDD9	
0 0	HDD1	HDD4	HDD7	HDD10	
$\Theta$	HDD2	HDD5	HDD8	HDD11	

No.	Description
1.	Front Panel LEDs and Buttons
2.	USB 3.2 Gen1 Port x 2
l	Note! Drives with green latches support NVMe.

Refer to section **2-3 Front Panel LEDs and Buttons** for a detailed description of the function of the LEDs.

### 2-2 Rear View

No.	Description	No.	Description
1.	PCIe Slot	5.	Management LAN Port
2.	OCP 3.0 Slot (Option/SFF)	6.	Data LAN Port
3.	Mini DisPlayPort	7.	ID Button with LED
4.	USB 3.2 Gen1 Port x 2	8.	OCP 3.0 Slot (Option/SFF)

Refer to section 2-5 Rear System LAN LEDs for a detailed description of the function of the LEDs.

## 2-3 Front Panel LEDs and Buttons

No.	Name	Color	Status	Description	
1.	Reset Button			Press this button to reset the system.	
2.	NMI button			Press this button for the server to generate a NMI to the processor. If multiple-bit ECC errors occur, the server will effectively be halted.	
		Green	On	Indicates the system is powered on.	
3.	Power button	Green	Blink	System is in ACPI S1 state (sleep mode).	
•	with LED	N/A	Off	<ul> <li>System is not powered on or in ACPI S5 state (power off)</li> <li>System is in ACPI S4 state (hibernate mode)</li> </ul>	
4.	ID Button with	Blue	On	Indicates the system identification is active.	
4.	LED <sup>(Note)</sup>	N/A	Off	Indicates the system identification is disabled.	
			Green -	On	Indicates locating the HDD.
		Green	Blink	Indicates accessing the HDD.	
5.	HDD Status	Amber	On	Indicates HDD error.	
	LED(Note)	Green/ Amber	Blink	Indicates HDD rebuilding.	
		N/A	Off	Indicates no HDD access or no HDD error.	
6.	System			This LED represents the RoT function LED behavior.	
-	Status LED			Please see the following section for detail LED behavior.	
		Green	On	Indicates a link between the system and the network or no	
7.	LAN1 Active/	Green	Blink	access.	
				Indicates data trasmission or receiving is occuring.	
		N/A	Off	Indicates no data transmission or receiving is occuring.	
(Note)	(Note) If your server features RoT function, please see the following section for detail LED behavior.				

## 2-4 RoT LEDs

	LED on Front panel(Note5)

	Blinks Blue	Blinks Amber		
BIOS : AUTH fail	2 times per second	2 times per second		
	[ON OFF ON OFF]	[ON OFF ON OFF]		

#### NOTE!

- 1. EC FW is broken or not exited result in Microchip CEC1702 cannot load EC FW for authentication.
- 2 CEC1702's bootloader load EC FW from BMC Flash1 when AC on. It must authenticate this FW firstly before run the FW. If the authenticate fail or not get the FW successfully, CEC1702 is not allowed to execute this FW and ECSTS\_LED1 on the MB is OFF state.
- 3. if active flash is still authentication failed after recovery sequence, Microchip CEC1702 stop the process and showing LED behavior.
- If backup flash authentication is failed cause by configuration table, public key or protected area is broken. Microchip CEC1702 stop the process and showing LED behavior.
- Front panel LED is controlled by BMC or Microchip CEC1702. Once Microchip CEC1702 is working(Auth or recovery), the front panel LED is controlled by Microchip CEC1702 and vice versa.

## 2-5 Rear System LAN LEDs

No.	Name	Color	Status	Description		
		Yellow	On	1 Gbps data rate		
1.	1GbE Speed LED	Green	On	100 Mbps data rate		
		N/A	Off	10 Mbps data rate		
		0	On	Link between system and network or no access		
2.	1GbE Link / Activity LED	Green	Blink	Data transmission or reception is occurring.		
		N/A	Off	No data transmission or reception is occurring.		

## 2-6 Power Supply Unit LED

State	Description
OFF	No AC power to all power supplies
1Hz Green Blinking	AC present / only standby on / Cold redundant mode
2Hz Green Blinking	Power supply firmware updateing mode
Amber	AC cord unplugged or AC power lost; with a second power supply in parallel still with AC input power
	Power supply critical event causing shut down: failure, OCP, OVP, fan failure and UVP
0.5Hz Amber Blinking	Power supply warning events where the power supply continues to operate: high temp, high power, high current and slow fan

## 2-7 Hard Disk Drive LEDs

RAID SKU		LED #1	Locate	HDD Fault	Rebuilding	HDD Access	HDD Present (No Access)
	Disk LED (LED	Green	ON(*1)	OFF		BLINK (*2)	OFF
No RAID	on Back Panel)	Amber	OFF	OFF		OFF	OFF
(via HBA) Slot (LEI	Removed HDD	Green	ON(*1)	OFF			
	Back Panel)	Amber	OFF	OFF			
RAID		Green	ON	OFF		BLINK (*2)	OFF
configuration (via HW RAID Card or SW RAID Card)	Disk LED	Amber	OFF	ON	(Low Speed: 2 Hz)	OFF	OFF
	Removed	Green	ON(*1)	OFF	(*3)		
	HDD Slot	Amber	OFF	ON	(*3)		

LED #2	HDD Present	No HDD
Green	ON	OFF

#### NOTE:

- \*1: Depends on HBA/Utility Spec.
- \*2: Blink cycle depends on HDD's activity signal.
- \*3: If HDD is pulled out during rebuilding, the disk status of this HDD is regarded as faulty.

## Chapter 3 System Hardware Installation

#### Pre-installation Instructions

Computer components and electronic circuit boards can be damaged by discharges of static electricity. Working on computers that are still connected to a power supply can be extremely dangerous. Follow the simple guidelines below to avoid damage to your computer or injury to yourself.

Always disconnect the computer from the power outlet whenever you are working inside the computer case.

• If possible, wear a grounded wrist strap when you are working inside the computer case. Alternatively, discharge any static electricity by touching the bare metal system of the computer case, or the bare metal body of any other grounded appliance.

• Hold electronic circuit boards by the edges only. Do not touch the components on the board unless it is necessary to do so. Do not flex or stress the circuit board.

Leave all components inside the static-proof packaging until you are ready to use the component for the installation.

## 3-1 Removing and Installing the Chassis Cover

Before you remove or install the system cover

• Make sure the system is not turned on or connected to AC power.

#### Follow these instructions to remove the chassis cover:

- 1. Remove the screw securing the chassis cover.
- 2. Unlock the plastic handle and pull the grip handle to open the panel cover.
- Slide the cover cover to the rear of the system and then remove the cover in the direction indicated by the arrow.
- 4. To reinstall the chassis cover follow steps 1-4 in reverse order.

## 3-2 Removing and Installing the Hard Disk Drive

Read the following guidelines before you begin to install the hard disk drive:

- Take note of the HDD tray orientation before sliding it out.
- The tray will not fit back into the bay if it is inserted incorrectly.
- Make sure that the hard disk drive is connected to the connector on the backplane.

#### Follow these instructions to install a 3.5" hard disk drive:

- 1. Press the release button.
- 2. Extend the locking lever.
- 3. Pull the locking lever in the direction indicated to remove the 3.5" HDD tray.
- 4. Pull the sides of the HDD tray in the direction indicated.
- 5. Slide the hard disk drive into the HDD tray.
- 6. Push the sides of the HDD tray back in the direction indicated to secure the hard disk drive in place.
- 7. Reinsert the HDD tray into the slot and close the locking lever.

#### Follow these instructions to install a 2.5" hard disk drive into 3.5" HDD Tray:

- 1. Press the release button.
- 2. Extend the locking lever.
- 3. Pull the locking lever in the direction indicated to remove the HDD tray.
- 4. Align the hard disk drive with the positioning screw on the HDD tray.
- 5. Secure the hard disk drive with five screws.
- 6. Reinsert the HDD tray into the slot and close the locking lever

## 3-3 Removing and Installing the Fan Duct

#### Follow these instructions to remove the fan duct:

- 1. Lift up to remove the fan duct.
- 2. To reinstall the fan duct, align the fan duct with the guiding groove. Push down the fan duct until it is firmly seated on the system.

## 3-4 Removing and Installing the Heat Sink

Read the following guidelines before you begin to install the heat sink:

- Always turn off the computer and unplug the power cord from the power outlet before installing the heat sink to prevent hardware damage.
- Unplug all cables from the power outlets.
- Disconnect all telecommunication cables from their ports.
- Place the system unit on a flat and stable surface.
- Open the system according to the instructions.

#### WARNING!

Failure to turn off the server before you start installing components may cause serious damage. Do not attempt the procedures described in the following sections unless you are a qualified service technician.

#### Follow these instructions to install the heat sink:

- 1. Loosen the screws securing the heat sink in place in reverse order  $(4 \rightarrow 3 \rightarrow 2 \rightarrow 1)$ .
- 2. Lift and remove the heat sink from the system.
- 3. To install the heat sink, reverse steps 1-2 while ensuring that you tighten the captive screws in sequential order  $(1\rightarrow 2\rightarrow 3\rightarrow 4)$  as seen in the image below.

## 3-5 Installing the CPU and Heat Sink

Read the following guidelines before you begin to install the CPU:

- Make sure that the motherboard supports the CPU.
- Always turn off the computer and unplug the power cord from the power outlet before installing the CPU to prevent hardware damage.
- Unplug all cables from the power outlets.
- Disconnect all telecommunication cables from their ports.
- Place the system unit on a flat and stable surface.
- Open the system according to the instructions.

#### WARNING!

Failure to properly turn off the server before you start installing components may cause serious damage. Do not attempt the procedures described in the following sections unless you are a qualified service technician.

#### Follow these instructions to install the CPU:

- 1. Loosen the six captive screws securing the CPU cover in sequential order  $(1 \rightarrow 2 \rightarrow 3 \rightarrow 4 \rightarrow 5 \rightarrow 6)$ .
- 2. Flip open the CPU cover.
- 3. Remove the plastic covering on the CPU socket
- 4. Align the processor to the carrier so that the gold triangle on the processor aligns with the triangle on the carrier, and then install the processor into the carrier.
- NOTE: Apply thermal compound evenly on the top of the CPU.
- 5. Install the CPU into place in the CPU socket.
- NOTE: Save and replace the CPU socket cover if the processor is removed from its socket.
- 6. Flip the CPU cover into place over the CPU socket.
- 7. Tighten the CPU cover screw to secure the CPU cover in place.
- 8. Secure the heatsink by tightening the screws in sequential order  $(1 \rightarrow 2 \rightarrow 3 \rightarrow 4)$ .

#### NOTE!

- Lock the CPU by using a Torx T20 screwdriver to tighten screw.
- When installing the heatsink to CPU, use Torx T20 screwdriver to tighten 4 captive nuts in sequence as 1-6.
- The ILM screw tightening torque: 1.5 kgf-cm
- The CPU heatsink screw tightening torque: 3 kgf-cm
- ILM and Heat sink for the screw tightening, Tighten the Screw a slight rotations in multiple times until each screw to the desired torque value.
- Do not fully tighten at once screw.

## 3-6 Removing and Installing Memory

Read the following guidelines before you begin to install the memory:

- Make sure that the motherboard supports the memory. It is recommended that memory of the same capacity, brand, speed, and chips be used.
- Always turn off the computer and unplug the power cord from the power outlet before installing the memory to prevent hardware damage.
- Memory modules have a foolproof design. A memory module can be installed in only one direction. If you are unable to insert the memory, switch the direction.

#### 3-6-1 Eight Channel Memory Configuration

This motherboard provides 16 DDR5 memory sockets and supports Eight Channel Technology. After the memory is installed, the BIOS will automatically detect the specifications and capacity of the memory.

#### 3-6-2 Removing and Installing a Memory Module

Before installing a memory module, make sure to turn off the computer and unplug the power cord from the power outlet to prevent damage to the memory module. Be sure to install DDR5 DIMMs on to this motherboard.

#### Follow these instructions to install a DIMM module:

- 1. Insert the DIMM memory module vertically into the DIMM slot and push it down.
- 2. Close the plastic clip at both edges of the DIMM slots to lock the DIMM module.
- 3. Reverse the installation steps when you want to remove the DIMM module.

#### 3-6-3 DIMM Population Table

Ranks Per DIM Type Data Width	Ranks Per DIMM and	DIMM Capacity (GB)	Speed (MT/s); Voltage (V); Slots per Channel(SPC) and DIMM per Channel (DPC)					
			1 Slot per Channel	2 Slots pe	r Channel			
	Data Wiutii	DIMM Density	1DPC	1DPC	2DPC			
		8Gb	1.2V	1.2V	1.2V			
RDIMM	SRx4	16GB	3200	3200	3200			
RDIMM	DRx8	16GB	5200	3200	5200			

#### 3-6-4 Processor and Memory Module Matrix Table

Memory	У СРОО															
Q'ty	A0	A1	B0	<b>B1</b>	<b>C0</b>	<b>C1</b>	D0	D1	H1	H0	G1	G0	F1	F0	E1	E0
2 DIMM	v															v
4 DIMM	v		v											v		v
8 DIMM	v		v		v		v			v		v		v		v
16 DIMM	v	v	v	v	v	v	v	V	v	v	v	v	V	v	v	v

## 3-7 Removing and Installing the PCIe Card

Voltages can be present within the server whenever an AC power source is connected. This
voltage is present even when the main power switch is in the off position. Ensure that the system
is powered off and all power sources have been disconnected from the server prior to installing a
PCIe card.

• Failure to observe these warnings could result in personal injury or damage to equipment.

• The PCIe riser assembly does not include a riser card or any cabling as standard. To install a PCIe card, a riser card must be installed.

#### Follow these instructions to install a PCIe card:

- 1. Loosen the two thumbnail screws securing the riser bracket inside the system.
- 2. Lift up the riser bracket out of system.
- 3. Remove the screw securing the slot cover from riser bracket.
- Orient the PCIe card with the riser guide slot and push in the direction of the arrow until the PCIe card sits in the PCIe card connector.
   NOTE: Some riser brackets allow for single or multiple PCIe cards. Repeat steps 3-4 as necessary.
- 5. Secure the PCIe card with the screw.
- 6. Repeat steps 1-2 to install the PCIe card into the system.

### 3-8 Installing the Mezzanine Card

#### 3-8-1 Installing the OCP 3.0 Mezzanine Card

- 1. Use of the following type of OCP 3.0 NIC is recommended:
  - OCP 3.0 SFF with pull tab
  - OCP 3.0 SFF with ejector latch
- 2. Save the black M3 screws in the event that you need to re-install the cover.

#### Follow these instructions to install an OCP 3.0 Mezzanine card:

- 1. Remove the two screws securing the OCP 3.0 card slot cover.
- 2. Remove the slot cover from the system.
- Insert the OCP 3.0 card into the card slot ensuring that the card is firmly connected to the connector on the motherboard.
- 4. Tighten the thumbnail screw to secure the OCP 3.0 card in place.
- 5. Reverse steps 3-4 to replace the OCP 3.0 card.

## 3-9 Installing the M.2 Device and Heat Sink

#### CAUTION

The position of the stand-off screw will depend on the size of the M.2 device. The stand-off screw is pre-installed for 22110 cards as standard. Refer to the size of the M.2 device and change the position of the stand-off screw accordingly.

#### Follow these instructions to install the M.2 device:

- 1. Insert the M.2 SSD module into the slot.
- 2. Secure it with the screw, tightening as necessary to fasten the M.2 SSD module in place.

#### 3-9-1 M.2 device with Heatsink

#### WARNING:

Please ensure a heatsink is attached to any M.2 device installed into the system. Installing an M.2 device without any heatsink may result in the system overheating or system performance being throttled.

• Please Go to for specific M.2 Slot location.

To install/remove the M.2 module and Heatsink use a No. 1 Phillips-head screwdriver with a screw torque of  $1.5 \pm 0.2$  kgf\*cm

#### Follow these instructions to install the M.2 device and heat sink:

- 1. Insert the M.2 device into the M.2 connector.
- 2. Press down on the M.2 device.
- 3. Install the thermal pad of the M.2 device to the M.2 device.
- 4. Press down on the thermal pad.
- 5. Secure the M.2 device and its thermal pad to the motherboard with a single screw.
- 6. Reverse steps 1-2 to remove the M.2 device.

## 3-10 Replacing the Fan Assembly

• Voltages can be present within the server whenever an AC power source is connected. This voltage is present even when the main power switch is in the off position. Ensure that the system is powered-down and all power sources have been disconnected from the server prior to replacing a system fan.

Failure to observe these warnings could result in personal injury or damage to equipment.

#### Follow these instructions to replace a fan assembly:

- 1. Lift up the fan assembly from the chassis.
- 2. Reverse the previous steps to install the replacement fan assembly

## 3-11 Removing and Installing the Power Supply

#### Follow these instructions to replace the power supply:

- 1. Flip up and then grasp the power supply handle.
- 2. Press the retaining clip on the right side of the power supply unit in the direction indicated.
- 3. Pull out the power supply unit using the handle.
- 4. Insert the replacement power supply unit firmly into the chassis. Connect the AC power cord to the replacement power supply.
- 5. Repeat steps 1-4 for replacement of the second power supply.

# Chapter 4 Motherboard Components

## 4-1 Motherboard Components

Item	Description
1	Front Panel USB 3.2 Gen1 Connector
2	Front Panel Connector
3	M.2 Slot (PCIe Gen5 x4, support NGFF-2280 or NGFF-22110)
4	SlimLine Connector (SL_SATA3)
5	SlimLine Connector (SL_SATA2)
6	Case Intrusion Alert Connector (Option)
7	SlimLine Connector (SL_SATA1)
8	HDD Back Plane Board Connector
9	OCP 3.0 Connector (PCIe Gen5 x16/OCP1)
10	NCSI Connector for add-on LAN Card (CN_NSCI)
11	System Battery
12	Riser Connector #1 (PCIe Gen5 /x16 Slot)

Item	Description
13	Riser Connector #2 (PCIe Gen5 /x16 Slot)
14	OCP 3.0 Connector (PCIe Gen5 x16/OCP2)
15	TPM Module Connector (SPI Interface)
16	2 x 6 Pin ATX Power Connector
17	2 x 5 Pin ATX Power Connector
18	MCIO Connector (MCIOP0_3AB/PCIe Gen5)
19	MCIO Connector (MCIOP0_3CD/PCIe Gen5)
20	MCIO Connector (MCIOP0_5AB/PCIe Gen5)
21	MCIO Connector (MCIOP0_4CD/PCIe Gen5)
22	MCIO Connector (MCIOP0_4AB/PCIe Gen5)

## 4-2 Jumper Settings

- 4-3 Backplane Board Storage Connector
- 4-3-1 CBP20C7

Item	Description
1.	MCIO 4i (SFF-TA1016/U.2_0)
2.	MCIO 4i (SFF-TA1016/U.2_1)
3.	MCIO 4i (SFF-TA1016/U.2_2)
4.	MCIO 4i (SFF-TA1016/U.2_3)
5.	MCIO 4i (SFF-TA1016/U.2_4)
6	MCIO 4i (SFF-TA1016/U.2_5)
7.	MCIO 4i (SFF-TA1016/U.2_6)
8.	MCIO 4i (SFF-TA1016/U.2_7)
9.	MCIO 4i (SFF-TA1016/U.2_8)
10.	MCIO 4i (SFF-TA1016/U.2_9)
11.	MCIO 4i (SFF-TA1016/U.2_10)
12.	MCIO 4i (SFF-TA1016/U.2_11)
13	SlimSAS 4i Connector (SFF-8654/SAS_SAS0)
14	SlimSAS 4i Connector (SFF-8654/SAS_SAS1)
15	SlimSAS 4i Connector (SFF-8654/SAS_SAS2)

# Chapter 5 BIOS Setup

BIOS (Basic Input and Output System) records hardware parameters of the system in the EFI on the motherboard. Its major functions include conducting the Power-On Self-Test (POST) during system startup, saving system parameters, loading the operating system etc. The BIOS includes a BIOS Setup program that allows the user to modify basic system configuration settings or to activate certain system features. When the power is turned off, the battery on the motherboard supplies the necessary power to the CMOS to keep the configuration values in the CMOS.

To access the BIOS Setup program, press the <DEL> key during the POST when the power is turned on.

- BIOS flashing is potentially risky, if you do not encounter any problems when using the current BIOS version, it is recommended that you don't flash the BIOS. To flash the BIOS, do it with caution. Inadequate BIOS flashing may result in system malfunction.
- It is recommended that you not alter the default settings (unless you need to) to prevent system instability or other unexpected results. Inadequately altering the settings may result in system's failure to boot. If this occurs, try to clear the CMOS values and reset the board to default values. (Refer to the Exit section in this chapter or introductions of the battery/clearing CMOS jumper in Chapter 4 for how to clear the CMOS values.)

#### **BIOS Setup Program Function Keys**

<←><→>	Move the selection bar to select the screen
<↑><↓>	Move the selection bar to select an item
<+>	Increase the numeric value or make changes
<->	Decrease the numeric value or make changes
<enter></enter>	Execute command or enter the submenu
<esc></esc>	Main Menu: Exit the BIOS Setup program
	Submenus: Exit current submenu
<f1></f1>	Show descriptions of general help
<f3></f3>	Restore the previous BIOS settings for the current submenus
<f9></f9>	Load the Optimized BIOS default settings for the current submenus
<f10></f10>	Save all the changes and exit the BIOS Setup program

#### Main

This setup page includes all the items in standard compatible BIOS.

#### Advanced

This setup page includes all the items of AMI BIOS special enhanced features.

(ex: Auto detect fan and temperature status, automatically configure hard disk parameters.)

#### Chipset

This setup page includes all the submenu options for configuring the function of processor, network, North Bridge, South Bridge, and System event logs.

#### Server Management

Server additional features enabled/disabled setup menus.

#### Security

Change, set, or disable supervisor and user password. Configuration supervisor password allows you to restrict access to the system and BIOS Setup.

A supervisor password allows you to make changes in BIOS Setup.

A user password only allows you to view the BIOS settings but not to make changes.

#### Boot

This setup page provides items for configuration of boot sequence.

#### Save & Exit

Save all the changes made in the BIOS Setup program to the CMOS and exit BIOS Setup. (Pressing <F10> can also carry out this task.)

Abandon all changes and the previous settings remain in effect. Pressing <Y> to the confirmation message will exit BIOS Setup. (Pressing <Esc> can also carry out this task.)

## 5-1 The Main Menu

Once you enter the BIOS Setup program, the Main Menu (as shown below) appears on the screen. Use arrow keys to move among the items and press <Enter> to accept or enter other sub-menu.

#### Main Menu Help

The on-screen description of a highlighted setup option is displayed on the bottom line of the Main Menu.

#### Submenu Help

While in a submenu, press <F1> to display a help screen (General Help) of function keys available for the menu. Press <Esc> to exit the help screen. Help for each item is in the Item Help block on the right side of the submenu.

When the system is not stable as usual, select the **Restore Defaults** item to set your system to its defaults.

The BIOS Setup menus described in this chapter are for reference only and may differ by BIOS version.

Parameter	Description
BMC Self Test BMC Device ID BMC Device revision	Displays BMC related information .
IPMI Version IPMI BMC Interface	Displays IPMI related information .
BMC Support	Enable/Disable interfaces to communicate with BMC. Options available: Enabled/Disabled. Default setting is <b>Enabled</b> .

(Note1) This item is configurable when FRB-2 Timer is set to Enabled.

(Note2) This item is configurable when OS Watchdog Timer is set to Enabled.

Parameter	Description
FRB-2 Timer	Enable/Disable FRB-2 timer (POST timer). Options available: Enabled, Disabled. Default setting is <b>Enabled</b> .
FRB-2 Timer <sup>(Note1)</sup> timeout	Configures the FRB2 Timer timeout. The value is between 1 to 30 minutes. Default setting is <b>6 minutes</b> .
FRB-2 Timer Policy <sup>(Note1)</sup>	Configures the FRB2 Timer policy. Options available: Do Nothing, Reset, Power Down, Power Cycle. Default setting is <b>Do Nothing</b> .
OS Watchdog Timer	Enable/Disable OS Watchdog Timer function. Options available: Enabled, Disabled. Default setting is <b>Disabled</b> .
OS Wtd Timer Timeout <sup>(Note2)</sup>	Configures OS Watchdog Timer. The value is between 1 to 30 minutes. Default setting is <b>10 minutes</b> .
OS Wtd Timer Policy <sup>(Note2)</sup>	Configure OS Watchdog Timer Policy. Options available: Reset, Do Nothing, Power Down, Power Cycle. Default setting is <b>Reset</b> .
Wait BMC Ready	POST wait BMC ready and reboot system. Options available: Disabled, 2 minutes, 4 minutes, 6 minutes. Default setting is <b>2 minutes</b> .
System Event Log	Press [Enter] to configure advanced items.
View FRU Information	Press [Enter] to view the FRU information.
BMC self test log	Press [Enter] to configure advanced items.
BMC VLAN Configuration	Press [Enter] to configure advanced items.
BMC network Configuration	Press [Enter] to configure advanced items.
IPv6 BMC Network Configuration	Press [Enter] to configure advanced items.

# 5-4-1 System Event Log

Server	Aptio Setup – AMI Mgmt	
Enabling/Disabling Options SEL Components Erase SEL When SEL is Full Custom EFI Logging Options Log EFI Status Codes NOTE: All values changed here do	[Enabled] [No] [Do Nothing] [Error code] not take	Change this to enable or disable event logging for error/progress codes during boot.
effect until computer is r		++: Select Screen 11: Select Item Enter: Select +/-: Change Opt. F1: General Help F3: Previous Values F9: Optimized Defaults F10: Save & Exit ESC: Exit

Parameter	Description
log area usage =00 out of 20	
logs	
Erase Log	Options available: No/Yes, On next reset/Yes, On every reset.
	Default setting is No.
	Configuration for reactions to a full log.
When Log is full	Option available: Do not log any more/Clear Log.
-	Default setting is <b>Do not log any more</b> .

### 5-4-4 BMC VLAN Configuration

Aptio Setup – AMI Server Mgmt		
BMC VLAN Configuration BMC VLAN ID BMC VLAN Priority	Serven Mgmt	VLAN ID of new VLAN or existing VLAN, valid value is 0~4094, 0 is disable VLAN ++: Select Screen 14: select Item Enter: Select +/-: Change Opt. F1: General Help F3: Previous Values F9: Optimized Defaults F10: Save & Exit ESC: Exit
	Version 2.22.1293 Copyright	E (E) 2024 AMI

Parameter	Description	
BMC VLAN Configuration		
	Select to configure BMC VLAN ID. The valid range is from 0 to 4094. When	
BMC VLAN ID	set to 0, BMC VLAN ID will be disabled.	
	Select to configure BMC VLAN Priority. The valid range is from 0 to 7.	
BMC VLAN Priority	When BMC VLAN ID is set to 0, BMC VLAN Priority will not be selected.	

### 5-4-5 BMC Network Configuration

BMC network configuration Select NCSI and Dedicated LAN [Mode3 (Failover)] Lan channel 1 Donfiguration Address source [Unspecified] Station IP address 10.1.116.153 Subnet mask 255.255.0 Router IP address 10.1.116.253 Station MAC address 10-FF-EO-30-AO-13 Real-time get BMC network address	Select to configure LAN channel parameters statically or dynanically(DHCP). Do nothing option will not modify any BMC network parameters during BIOS phase
Real-time get BMC network address	
	<pre>++: Select Screen 11: Select Item Enter: Select +/-: Change Opt. F1: General Help F3: Previous Values F9: Optimized Defaults F10: Save &amp; Exit ESC: Exit</pre>

Parameter	Description	
BMC network configuration		
Select NCSI and Dedicated LAN	Options available: Do Nothing, Model1(Dedicated), Model2(NCSI), Mode3(Failover). Default setting is <b>Do Nothing</b> .	
Lan Channel 1		
Configuration Address source	Selects to configure LAN channel parameters statically or dynamically (DHCP). Options available: Unspecified, Static, DynamicBmcDhcp. Default setting is <b>DynamicBmcDhcp</b> .	
Station IP address	Displays IP Address information.	
Subnet mask	Displays Subnet Mask information. Please note that the IP address must be in three digitals, for example, 192.168.000.001.	
Router IP address	Displays the Router IP Address information.	
Station MAC address	Displays the MAC Address information.	
Real-time get BMC network address	Press [Enter] will set LAN mode and Address source and then get IP, Subnet, Gateway and MAC address.	

#### 5-4-6 IPv6 BMC Network Configuration

Parameter	Description	
IPv6 BMC network configuration		
IPv6 BMC Lan Channel 1		
IPv6 BMC Lan Option	Enable/Disable IPv6 BMC LAN channel function. When this item is disabled, the system will not modify any BMC network during BIOS phase. Options available: Unspecified, Disable, Enable. Default setting is Enable.	
IPv6 BMC Lan IP Address Source	Selects to configure LAN channel parameters statically or dynamically (by BIOS or BMC). Options available: Unspecified, Static, Dynamic-Obtained by BMC running DHCP. Default setting is <b>Dynamic-Obtained by BMC running DHCP</b> .	
IPv6 BMC Lan IP Address/ Prefix Length	Check if the IPv6 BMC LAN IP address matches those displayed on the screen.	

# 5-5 Security Menu

The Security menu allows you to safeguard and protect the system from unauthorized use by setting up access passwords.

	Main Advanced Chipset Serv	Aptio Setup – AM. er Mgmt <mark>Security</mark> Boot	
1	Password Description		Set Administrator Password
	If ONLY the Administrator's pa then this only limits access t only asked for when entering S If ONLY the User's password is is a power on password and mus poot or enter Setup. In Setup have Administrator rights. The password length must be in the following range:	o Setup and is etup. set, then this t be entered to	
	inimum length	3	
	Maximum length	20	
	Administrator Password Iser Password Secure Boot		++: Select Screen 14: Select Item Enter: Select +/-: Change Opt. F1: General Help F3: Previous Values F9: Optimized Defaults F10: Save & Exit ESC: Exit
	Ver	sion 2.22 1293 Donuright	(P) 2024 AVT

There are two types of passwords that you can set:

Administrator Password

Entering this password will allow the user to access and change all settings in the Setup Utility.

User Password

Entering this password will restrict a user's access to the Setup menus. To enable or disable this field, a Administrator Password must first be set. A user can only access and modify the System Time, System Date, and Set User Password fields.

Parameter	Description
Administrator Password	Press [Enter] to configure the administrator password.
User Password	Press [Enter] to configure the user password.
Secure Boot	Press [Enter] to configure advanced items.

#### 5-5-1 Secure Boot

The Secure Boot feature is applicable if supported by your Operating System.

If your Operating System is not supporting Secure Boot, the system will hang when starting the Operating System.

System Mode	Setup	Secure Boot feature is Active if Secure Boot is
	[Disabled] Not Active	Enabled, Platform Key(PK) is enrolled and the System is
Secure Boot Mode Restore Factory Keys	[Custom]	in User mode. The mode change requires
Reset To Setup Mode		platform reset
		++: Select Screen 11: Select Item Enter: Select +/-: Change Opt. F1: General Help F3: Previous Values F9: Optimized Defaults F10: Save & Exit ESC: Exit

Parameter	Description
System Mode	Displays if the system is in User mode or Setup mode.
Secure Boot	Enable/ Disable the Secure Boot function. Options available: Enabled, Disabled. Default setting is <b>Disabled</b> .
Secure Boot Mode <sup>(Note)</sup>	Secure Boot requires all the applications that are running during the booting process to be pre-signed with valid digital certificates. This way, the system knows all files being loaded before the Operating System loads to the login screen have not been tampered with. When set to Standard, it will automatically load the Secure Boot keys form the BIOS databases. When set to Custom, you can customize the Secure Boot settings and manually load its keys from the BIOS database. Options available: Standard, Custom. Default setting is <b>Standard</b> .
Restore Factory Keys	Forces the system to user mode and installs factory default Secure Boot key database.
Reset To Setup Mode	Reset the system to Setup Mode.

(Note) Advanced items prompt when this item is set to Custom.

Parameter	Description
Key Management	<ul> <li>Press [Enter] to configure advanced items.</li> <li>Please note that this item is configurable when Secure Boot Mode is set to Custom.</li> <li>Factory Key Provision <ul> <li>Allows to provision factory default Secure Boot keys when system is in Setup Mode.</li> <li>Options available: Enabled, Disabled. Default setting is Disabled.</li> </ul> </li> <li>Restore Factory Keys <ul> <li>Installs all factory default keys. Version 2 22 1293 Convright (P) 2024 AWT	

Version 2.	22.1293 Cop	yright (C)	2024 AMI
------------	-------------	------------	----------

Parameter	Description
Save Options	
Save and Exit	Saves changes made and closes the BIOS setup. Options available: Yes, No.
Discard changes and exit	Discards changes made and exits the BIOS setup. Options available: Yes, No.
Save Changes and Reset	Restarts the system after saving the changes made. Options available: Yes, No.
Discard Changes and Reset	Restarts the system without saving any changes. Options available: Yes, No.
Save Changes	Saves changes done so far to any of the setup options. Options available: Yes, No.
Discard Changes	Discards changes made and closes the BIOS setup. Options available: Yes, No.
Default Options	

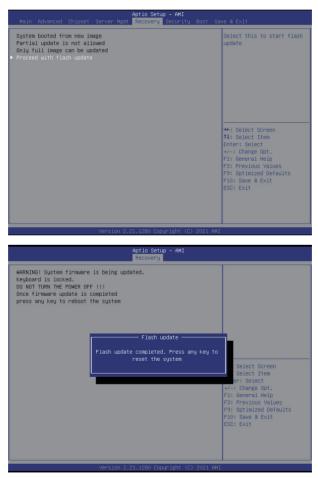

Parameter	Description
Restore Defaults	Loads the default settings for all BIOS setup parameters. Setup Defaults are quite demanding in terms of resources consumption. If you are using low-speed memory chips or other kinds of low-performance components and you choose to load these settings, the system might not function properly. Options available: Yes, No.
Save the User Default Values	Saves the changes made as the user default settings. Options available: Yes, No.
Restore the User Default Values	Loads the user default settings for all BIOS setup parameters. Options available: Yes, No.
Boot Device Priority	Press [Enter] to configure the device as the boot-up drive.
Launch EFI Shell	Attempts to Launch EFI Shell application (Shell.efi) from one of the available file system devices.

# 5-8 BIOS Recovery

The system has an embedded recovery technique. In the event that the BIOS becomes corrupt the boot block can be used to restore the BIOS to a working state. To restore your BIOS, please follow the instructions listed below:

Recovery Instruction:

- 1. Copy the XXX.rom to USB diskette.
- 2. Setting BIOS Recovery jump to enabled status.
- 3. Boot into BIOS recovery.
- 4. Run Proceed with flash update.
- 5. BIOS updated.

# 5-9 BIOS POST Beep code (AMI standard)

#### 5-9-1 PEI Beep Codes

# of Beeps	Description
1	Memory not Installed.
1	Memory was installed twice (InstallPeiMemory routine in PEI Core called twice)
2	Recovery started
3	DXEIPL was not found
3	DXE Core Firmware Volume was not found
4	Recovery failed
4	S3 Resume failed
7	Reset PPI is not available

### 5-9-2 DXE Beep Codes

# of Beeps	Description
1	Invalid password
4	Some of the Architectural Protocols are not available
5	No Console Output Devices are found
5	No Console Input Devices are found
6	Flash update is failed
7	Reset protocol is not available
8	Platform PCI resource requirements cannot be met
