Documentation Classifications

In order to assist in the use of this product, Giga Computing provides the following types of documentation:

- User Manual: detailed information & steps about the installation, configuration and use of this product (e.g. motherboard, server barebones), covering hardware and BIOS.
- User Guide: detailed information about the installation & use of an add-on hardware or software component (e.g. BMC firmware, rail-kit) compatible with this product.
- Quick Installation Guide: a short guide with visual diagrams that you can reference easily for installation purposes of this product (e.g. motherboard, server barebones).

Please see the support section of the online product page to check the current availability of these documents.

For More Information

For related product specifications, the latest firmware and software, and other information please visit our website at http://www.gigabyte.com/Enterprise

For GIGABYTE distributors and resellers, additional sales & marketing materials are available from our reseller portal: http://reseller.b2b.gigabyte.com

For further technical assistance, please contact your GIGABYTE representative or visit https://esupport.gigabyte.com/ to create a new support ticket

For any general sales or marketing enquiries, you may also message GIGABYTE server directly by email: server.grp@gigabyte.com

Conventions

The following conventions are used in this user's guide:

| NOTE! Pieces of additional information related to the current topic. | |
|---|--|
| CAUTION! Precautionary measures to avoid possible hardware or software problems. | |
| WARNING! Alerts to any damage that might result from doing or not doing specific actions. | |

Server Warnings and Cautions

Before installing a server, be sure that you understand the following warnings and cautions.

WARNING!

To reduce the risk of electric shock or damage to the equipment:

- Do not disable the power cord grounding plug. The grounding plug is an important safety feature.
- Plug the power cord into a grounded (earthed) electrical outlet that is easily accessible at all times.
- · Unplug the power cord from the power supply to disconnect power to the equipment.
- Do not route the power cord where it can be walked on or pinched by items placed against it. Pay particular attention to the plug, electrical outlet, and the point where the cord extends from the server.

To reduce the risk of personal injury from hot surfaces, allow the drives and the internal system components to cool before touching them.

WARNING!

This server is equipped with high speed fans. Keep away from hazardous moving fan blades during servicing.

- Do not operate the server for long periods with the access panel open or removed. Operating the server in this manner results in improper airflow and improper cooling that can lead to thermal damage.
- Danger of explosion if battery is incorrectly replaced.
- · Replace battery with the same or equivalent type recommended by the manufacturer.
- · Dispose of used batteries according to the manufacturer's instructions.

Risk of explosion if battery is replaced incorrectly or with an incorrect type. Replace the battery only with the same or equivalent type recommended by the manufacturer. Dispose of used batteries according to the manufacturer's instructions.

ESD CAN DAMAGE DRIVES, BOARDS, AND OTHER PARTS. WE RECOMMEND THAT YOU PERFORM ALL PROCEDURES AT AN ESD WORKSTATION. IF ONE IS NOT AVAILABLE, PROVIDE SOME ESD PROTECTION BY WEARING AN ANTI-STATIC WRIST STRAP AT-TACHED TO CHASSIS GROUND -- ANY UNPAINTED METAL SURFACE -- ON YOUR SERVER WHEN HANDLING PARTS.

Always handle boards carefully, they can be extremely sensitive to ESD. Hold boards only by their edges without touching any components or connectors. After removing a board from its protective ESD bag or from the system, place the board component side up on a grounded, static free surface. Use a conductive foam pad if available but not the ESD bag. Do not slide the board over any surface.

System power on/off: To service components within the server, please ensure the power has been disconnected.

e.g. Remove the node from the server chassis (to disconnect power) or disconnect the power from the server chassis.

Make sure the system is removed from the rack before opening the chassis, adding, or removing any non hot-plug components.

Hazardous conditions, devices and cables: Hazardous electrical conditions may be present on power, telephone, and communication cables. Turn off the system chassis and disconnect the cables attached to the system before servicing the chassis. Otherwise, personal injury or equipment damage can result.

Electrostatic discharge (ESD) and ESD protection: ESD can damage drives, boards, and other parts. We recommend that you perform all procedures in this chapter only at an ESD work-station. If one is not available, provide some ESD protection by wearing an antistatic wrist strap attached to chassis ground (any unpainted metal surface on the server) when handling parts.

ESD and handling boards: Always handle boards carefully. They can be extremely sensi-tive to electrostatic discharge (ESD). Hold boards only by their edges. After removing a board from its protective wrapper or from the system, place the board component side up on a grounded, static free surface. Use a conductive foam pad if available but not the board wrapper. Do not slide board over any surface.

Installing or removing jumpers: A jumper is a small plastic encased conductor that slips over two jumper pins. Some jumpers have a small tab on top that can be gripped with fin-gertips or with a pair of fine needle nosed pliers. If the jumpers do not have such a tab, take care when using needle nosed pliers to remove or install a jumper; grip the narrow sides of the jumper with the pliers, never the wide sides. Gripping the wide sides can dam-age the contacts inside the jumper, causing intermittent problems with the function con-trolled by that jumper. Take care to grip with, but not squeeze, the pliers or other tool used to remove a jumper, or the pins on the board may bend or break.

Chapter 1 Hardware Installation

1-1 Installation Precautions

The motherboard/system contain numerous delicate electronic circuits and components which can become damaged as a result of electrostatic discharge (ESD). Prior to installation, carefully read the service guide and follow these procedures:

- Prior to installation, do not remove or break motherboard S/N (Serial Number) sticker or warranty sticker provided by your dealer. These stickers are required for warranty validation.
- Always remove the AC power by unplugging the power cord from the power outlet before installing or removing the motherboard or other hardware components.
- When connecting hardware components to the internal connectors on the motherboard, make sure they are connected tightly and securely.
- When handling the motherboard, avoid touching any metal leads or connectors.
- It is best to wear an electrostatic discharge (ESD) wrist strap when handling electronic components such as a motherboard, CPU or memory. If you do not have an ESD wrist strap, keep your hands dry and first touch a metal object to eliminate static electricity.
- Prior to installing the motherboard, please have it on top of an antistatic pad or within an electrostatic shielding container.
- Before unplugging the power supply cable from the motherboard, make sure the power supply has been turned off.
- Before turning on the power, make sure the power supply voltage has been set according to the local voltage standard.
- Before using the product, please verify that all cables and power connectors of your hardware components are connected.
- To prevent damage to the motherboard, do not allow screws to come in contact with the motherboard circuit or its components.
- Make sure there are no leftover screws or metal components placed on the motherboard or within the computer casing.
- Do not place the computer system on an uneven surface.
- Do not place the computer system in a high-temperature environment.
- Turning on the computer power during the installation process can lead to damage to system components as well as physical harm to the user.
- If you are uncertain about any installation steps or have a problem related to the use of the product, please consult a certified computer technician.

1-2 Product Specifications

NOTE:

We reserve the right to make any changes to the product specifications and product-related information without prior notice.

| System Dimension | 2U 438 (W) x 43.5 (H) x 815(D) mm |
|---------------------|---|
| CPU | 5th Generation Intel® Xeon® Scalable Processors 4th Generation Intel® Xeon® Scalable Processors Intel® Xeon® CPU Max Series Dual processor, CPU TDP up to 350W NOTE: If only 1 CPU is installed, some PCIe or memory functions might be unavailable |

Power Supply

R283-S95-AAH1

Dual 1300W 80 PLUS Titanium redundant power supply

AC Input:

- 100-127V~/ 12A, 50-60Hz
- 200-240V~/ 8A, 50-60Hz

DC Input:

• 240Vdc/7A

DC Output:

- Max 1000W/ 100-127V~
- + 12.2V/ 82A
- + 12.2Vsb/ 3A
- Max 1300W/ 200-240V~ or 240Vdc Input
- + 12.2V/ 106A
- + 12.2Vsb/ 3A

R283-S95-AAV1

• 1+1 1600W 80 PLUS Titanium redundant power supplies

AC Input:

- 100-127V~/ 12A, 50-60Hz
- 200-240V~/ 10A, 50-60Hz

DC Input:

• 240Vdc/ 8A

DC Output:

- Max 1000W/ 100-127V~
- + 12.2V/ 82A
- + 12.2Vsb/ 3A
- Max 1600W/ 200-240V~ or 240Vdc Input
- + 12.2V/ 132A
- + 12.2Vsb/ 3A

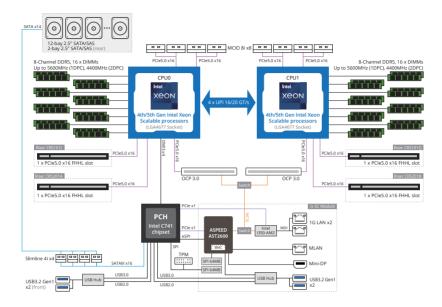

NOTE:

 The power supply specifications provided herein is for the default server configuration. Different SKUs have different PSU specs, so please see the system rating label on the server for the accurate PSU specification.

1-3-2 R283-S95-AAV1

Chapter 2 System Appearance

2-1 Front View

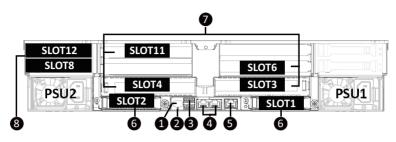

| No. | Description | |
|---|------------------------------|--|
| 1. | Front Panel LEDs and Buttons | |
| 2. | USB 3.2 Gen1 Port x 2 | |
| Note! Drives with green latches support NVMe. | | |

Refer to section **2-3 Front Panel LEDs and Buttons** for a detailed description of the function of the LEDs.

2-2 Rear View

| No. | Description | No. | Description |
|-----|-----------------------|-----|----------------------------|
| 1. | Mini DP Port | 5. | Server Management LAN Port |
| 2. | ID LED | 6. | OCP 3.0 Slot (Option/SFF) |
| 3. | USB 3.2 Gen1 Port x 2 | 7. | PCIe Slot |
| 4. | 1GbE LAN Port x 2 | 8. | 2.5" Hard Drive Bay |

Refer to section **2-5 Rear System LAN LEDs** for a detailed description of the function of the LEDs.

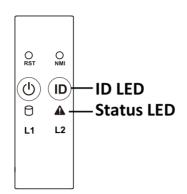

2-3 Front Panel LEDs and Buttons

| No. | Name | Color | Status | Description | |
|--------|--|--|---------------|---|--|
| 1. | Reset Button | | | Press this button to reset the system. | |
| 2. | NMI button | | | Press this button for the server to generate a NMI to the processor. If multiple-bit ECC errors occur, the server will effectively be halted. | |
| 2 | Power button | Green | On | Indicates the system is powered on. | |
| 3. | with LED | N/A | Off | System is not powered on or in ACPI S5 state (power off) | |
| 4. | ID Button with | Button with Blue On System identification is active. | | System identification is active. | |
| 4. | LED ^(Note) | N/A | Off | System identification is disabled. | |
| | | Green | On | Indicates locating the HDD. | |
| | | Gitteri | Blink | Indicates accessing the HDD. | |
| 5. | HDD Status | Amber | On | Indicates HDD error. | |
| | LED | Green/ Amber | Blink | Indicates HDD rebuilding. | |
| | | N/A | Off | Indicates no HDD access or no HDD error. | |
| | System Status LED ^(Note) | Green | Solid On | System is operating normally. | |
| | | Amber | Solid On | Critical condition, may indicate: System fan failure System temperature | |
| 6. | | | Blink | Non-critical condition, may indicate: Redundant power module failure Temperature and voltage issue Chassis intrusion | |
| | | N/A | Off | System is not ready, may indicate: POST error NMI error Processor or terminator missing | |
| 7/0 | LAN1/2 Active/ | Green | On | Indicates a link between the system and the network or no access. | |
| 7/8. | Link LED | Green | Blink | Indicates data trasmission or receiving is occuring. | |
| | | N/A | Off | Indicates no data transmission or receiving is occuring. | |
| (Note) | If your server feat | ures RoT fu | nction, pleas | se see the following section for detail LED behavior. | |

System Appearance - 21 -

2-4 RoT LEDs

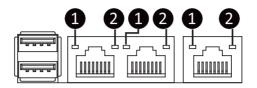

| | LED on Front panel(Note5) | | |
|--|---------------------------|--------------------|--|
| | ID LED | Status LED | |

| | Blinks Blue | Blinks Amber | | | | |
| BIOS : AUTH fail ^(Note2) | 1 time per second | 1 time per second | | | | |
| | Blinks Blue | Blinks Green | | | | |
| BMC : AUTH fail after doing recovery ^(Note3) | 2 times per second | 2 times per second | | | | |
| • • | [ON OFF OFF] | [ON OFF OFF] | | | | |
| | Blinks Blue | Blinks Amber | | | | |
| BIOS : AUTH fail after doing recovery ^(Note3) | 2 times per second | 2 times per second | | | | |
| | [ON OFF OFF] | [ON OFF OFF] | | | | |
| Backup Flash Authentication Fail ^(Note4) | | | | | | |
| | Blinks Blue | Blinks Green | | | | |
| BMC : AUTH fail | 2 times per second | 2 times per second | | | | |
| | [ON OFF ON OFF] | [ON OFF ON OFF] | | | | |
| | Blinks Blue | Blinks Amber | | | | |
| BIOS : AUTH fail | 2 times per second | 2 times per second | | | | |
| | [ON OFF ON OFF] | [ON OFF ON OFF] | | | | |

NOTE!

- 1. EC FW is broken or not exited result in Microchip CEC1702 cannot load EC FW for authentication.
- 2 CEC1702's bootloader load EC FW from BMC Flash1 when AC on. It must authenticate this FW firstly before run the FW. If the authenticate fail or not get the FW successfully, CEC1702 is not allowed to execute this FW and ECSTS_LED1 on the MB is OFF state.
- if active flash is still authentication failed after recovery sequence, Microchip CEC1702 stop the process and showing LED behavior.
- If backup flash authentication is failed cause by configuration table, public key or protected area is broken. Microchip CEC1702 stop the process and showing LED behavior.
- Front panel LED is controlled by BMC or Microchip CEC1702. Once Microchip CEC1702 is working(Auth or recovery), the front panel LED is controlled by Microchip CEC1702 and vice versa.

2-5 Rear System LAN LEDs

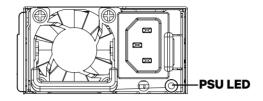

| No. | Name | Color | Status | Description | |
|----------------------------------|------|--------------|--------|---|--|
| 1. 1GbE Speed LED | | Yellow | On | 1 Gbps data rate | |
| | | ' (freen ()n | | 100 Mbps data rate | |
| LLD | | N/A | Off | 10 Mbps data rate | |
| | | Croon | On | Link between system and network or no access | |
| 2. 1GbE Link / Activity LED _ | | Green Blink | | Data transmission or reception is occurring. | |
| , | | N/A | Off | No data transmission or reception is occurring. | |

2-6 Power Supply Unit LED

The power supply may be vary based on the system configuration.

| State | Description |
|--------------------|---|
| OFF | No AC power to all power supplies |
| 1Hz Green Blinking | AC present / only standby on / Cold redundant mode |
| 2Hz Green Blinking | Power supply firmware updating mode |
| Amber | AC cord unplugged or AC power lost; with a second power supply in parallel still with AC input power |
| | Power supply critical event causing shut down: failure, OCP, OVP, fan failure and UVP |
| 1Hz Amber Blinking | Power supply warning events where the power supply continues to operate: high temp, high power, high current and slow fan |

2-7 Hard Disk Drive LEDs

| RAID SKU | | LED #1 | Locate | HDD Fault | Rebuilding | HDD Access | HDD Present (No Access) |
|---|--|--------|--------|--------------|----------------------|------------|----------------------------|
| | Disk LED (LED | Green | ON(*1) | OFF | | BLINK (*2) | OFF |
| No RAID | on Back Panel) | Amber | OFF | OFF | | OFF | OFF |
| configuration (via HBA) | Removed HDD Slot (LED on Back Panel) | Green | ON(*1) | OFF | | | |
| | | Amber | OFF | OFF | | | |
| RAID configuration (via HW RAID Card or SW RAID Card) | | Green | ON | OFF | | BLINK (*2) | OFF |
| | Disk LED | Amber | OFF | ON | (Low Speed: 2 Hz) | OFF | OFF |
| | Removed | Green | ON(*1) | OFF | (*3) | | |
| | HDD Slot | Amber | OFF | ON | (*3) | | |

| LED #2 | HDD Present | No HDD |
|--------|-------------|--------|
| Green | ON | OFF |

NOTE:

- *1: Depends on HBA/Utility Spec.
- *2: Blink cycle depends on HDD's activity signal.
- *3: If HDD is pulled out during rebuilding, the disk status of this HDD is regarded as faulty.

Chapter 3 System Hardware Installation

Pre-installation Instructions

Computer components and electronic circuit boards can be damaged by discharges of static electricity. Working on computers that are still connected to a power supply can be extremely dangerous. Follow the simple guidelines below to avoid damage to your computer or injury to yourself.

- Always disconnect the computer from the power outlet whenever you are working inside the computer case.
- If possible, wear a grounded wrist strap when you are working inside the computer case.
 Alternatively, discharge any static electricity by touching the bare metal system of the computer case, or the bare metal body of any other grounded appliance.
- Hold electronic circuit boards by the edges only. Do not touch the components on the board unless it is necessary to do so. Do not flex or stress the circuit board.
- Leave all components inside the static-proof packaging until you are ready to use the component for the installation.

3-1 Removing and Installing the Chassis Cover

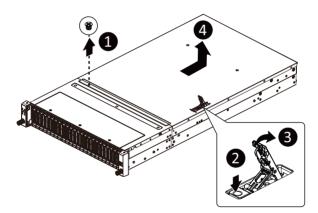

Before you remove or install the system cover

• Make sure the system is not turned on or connected to AC power.

Follow these instructions to remove the chassis cover:

- 1. Remove the screw securing the chassis cover.
- 2. Unlock the plastic handle and pull the grip handle to open the panel cover.
- Slide the cover cover to the rear of the system and then remove the cover in the direction indicated by the arrow.
- 4. To reinstall the chassis cover follow steps 1-4 in reverse order.

3-2 Removing and Installing the Hard Disk Drive

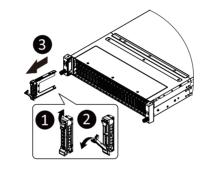

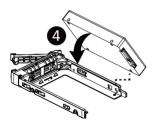

Read the following guidelines before you begin to install the hard disk drive:

- Take note of the HDD tray orientation before sliding it out.
- The tray will not fit back into the bay if it is inserted incorrectly.
- Make sure that the hard disk drive is connected to the connector on the backplane.

Follow these instructions to install a 2.5" hard disk drive:

- 1. Press the release button.
- 2. Extend the locking lever.
- 3. Pull the locking lever in the direction indicated to remove the HDD tray.
- 4. Align the hard disk drive with the positioning stud on the HDD tray.
- 5. Slide the hard disk drive into the HDD tray.
- 6. Reinsert the HDD tray into the slot and close the locking lever.

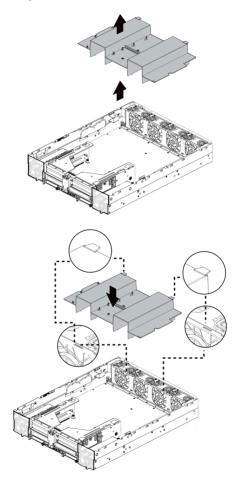

3-3 Removing and Installing the Fan Duct

Follow these instructions to remove the fan duct:

- 1. Lift up to remove the fan duct.
- 2. To reinstall the fan duct, align the fan duct with the guiding groove. Push down the fan duct until it is firmly seated on the system.

3-4 Removing and Installing the Heat Sink

Read the following guidelines before you begin to install the heat sink:

- Always turn off the computer and unplug the power cord from the power outlet before installing the heat sink to prevent hardware damage.
- Unplug all cables from the power outlets.
- Disconnect all telecommunication cables from their ports.
- Place the system unit on a flat and stable surface.
- · Open the system according to the instructions.

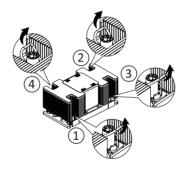

WARNING!

Failure to turn off the server before you start installing components may cause serious damage. Do not attempt the procedures described in the following sections unless you are a qualified service technician.

Follow these instructions to install the heat sink:

- 1. Loosen the screws securing the heat sink in place in reverse order $(4 \rightarrow 3 \rightarrow 2 \rightarrow 1)$.
- 2. Lift and remove the heat sink from the system.
- 3. To install the heat sink, reverse steps 1-2 while ensuring that you tighten the captive screws in sequential order $(1\rightarrow 2\rightarrow 3\rightarrow 4)$ as seen in the image below.

3-5 Installing the CPU and Heat Sink

Read the following guidelines before you begin to install the CPU:

- Make sure that the motherboard supports the CPU.
- Always turn off the computer and unplug the power cord from the power outlet before installing the CPU to prevent hardware damage.
- Unplug all cables from the power outlets.
- Disconnect all telecommunication cables from their ports.
- Place the system unit on a flat and stable surface.
- Open the system according to the instructions.

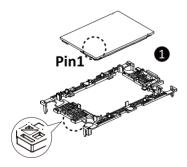

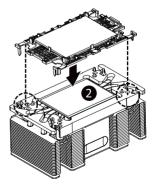

WARNING!

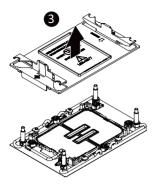

Failure to properly turn off the server before you start installing components may cause serious damage. Do not attempt the procedures described in the following sections unless you are a qualified service technician.

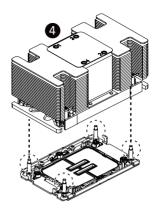

Follow these instructions to install the CPU:

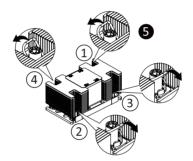

- Align the processor to the carrier so that the gold triangle on the processor aligns with the triangle on the carrier, and then install the processor into the carrier. NOTE: Apply thermal compound evenly on the top of the CPU.
- Carefully flip the heatsink over. Align the carrier assembly so that the triangle on the carrier aligns with the triangle on the heatsink, and then install the carrier assembly onto the bottom of the heatsink.
- Remove the CPU socket cover. NOTE: Save and replace the CPU socket cover if the processor is removed from its socket.
- 4. Align the heatsink to the CPU socket using the guide pins and make sure the gold triangle is in the correct orientation. Then place the heatsink onto the top of the CPU socket.
- Secure the heatsink by tightening the screws in sequential order (1→2→3→4).
 NOTE: When removing the heatsink, loosen the screws in reverse order (4→3→2→1).

Carrier Types used for Package Types

| Package Type | Xeon [®] SP XCC | Xeon [®] SP MCC | Xeon [®] SP+HBM |
|--------------|--------------------------|--------------------------|--------------------------|
| Carrier Code | E1A | E1B | E1C |

NOTE!

- The carrier code is marked on each carrier and matches a code laser marked on to the IHS(Integrated Heat Spreader) to ensure the right parts are used together.
- When installing the heatsink to CPU, use T30-Lobe driver to tighten 4 captive nuts in sequence as 1-4.
- The screw tightening torque: 8 ± 0.5 kgf-cm.

3-6 Removing and Installing Memory

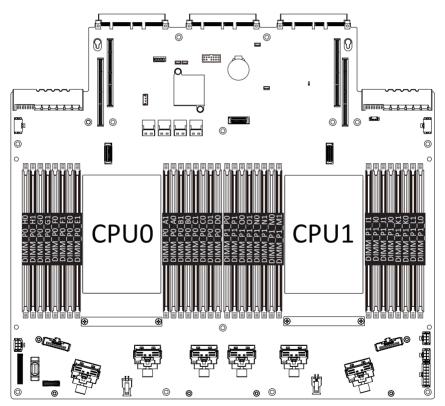

Read the following guidelines before you begin to install the memory:

- Make sure that the motherboard supports the memory. It is recommended that memory of the same capacity, brand, speed, and chips be used.
- Always turn off the computer and unplug the power cord from the power outlet before installing the memory to prevent hardware damage.
- Memory modules have a foolproof design. A memory module can be installed in only one direction. If you are unable to insert the memory, switch the direction.

3-6-1 Eight Channel Memory Configuration

This motherboard provides 32 DDR5 memory sockets and supports Eight Channel Technology. After the memory is installed, the BIOS will automatically detect the specifications and capacity of the memory.

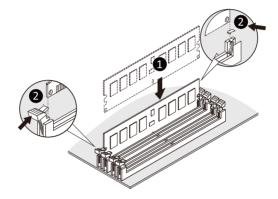

3-6-2 Removing and Installing a Memory Module

Before installing a memory module, make sure to turn off the computer and unplug the power cord from the power outlet to prevent damage to the memory module. Be sure to install DDR5 DIMMs on to this motherboard.

Follow these instructions to install a DIMM module:

- 1. Insert the DIMM memory module vertically into the DIMM slot and push it down.
- 2. Close the plastic clip at both edges of the DIMM slots to lock the DIMM module.
- 3. Reverse the installation steps when you want to remove the DIMM module.

3-6-3 DIMM Population Table

4th Gen Intel Xeon Scalable Processors-SP Memory Support

| Туре | Ranks Per DIMM and Data Width | DIMM Capacity (GB) | | | Speed (MT/s); DIMM per Ch 1DPC ¹ | • • • • | | |
|-----------|----------------------------------|--------------------|-------------------|-------|---|---------|----|--|
| | | 16Gb | 24Gb ² | 36Gb | 1.1 | | | |
| | SRx8 (RC D) | 16GB | 24GB | NA | 4800 | 4400 | | |
| | SRx4 (RC C) | 32GB | 48GB | NA | | | | |
| RDIMM | SRx4 (RC F) 9x4 | 32GB | NA | NA | | | | |
| RDIIVIIVI | DRx8 (RC E) | 32GB | 48GB | NA | | | | |
| | DRx4 (RC A) | 64GB | 96GB | 128GB | | | | |
| | DRx4 (RC B) 9x4 | 64GB | NA | NA |] | | | |
| RDIMM 3DS | (4R/8R)x4 | 2H-128GB | NA | NIA | NIA | | NA | |
| | (RC A) | 4H-256GB | | IN/A | | | | |

NOTE:

1. 1DPC applies to 1SPC or 2SPC implementations (SPC - Sockets Per Channel)

2. 24Gb XCC only w/ limited configs: 1DPC all DIMM types, 2DPC 96GB only. Only 8 and 16 DIMM configs, no fallbacks.

5th Gen Intel Xeon Scalable Processors-SP Memory Support

| Туре | Ranks Per DIMM and Data Width | DIMM Capacity (GB) | | | Speed (MT/s); DIMM per Ch 1DPC ¹ | • • • • | | | | |

3-7 Removing and Installing the PCIe Card

Voltages can be present within the server whenever an AC power source is connected. This
voltage is present even when the main power switch is in the off position. Ensure that the system
is powered off and all power sources have been disconnected from the server prior to installing a
PCIe card.

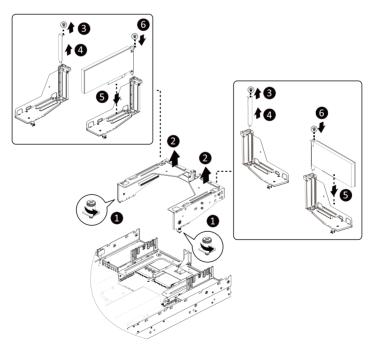

• Failure to observe these warnings could result in personal injury or damage to equipment.

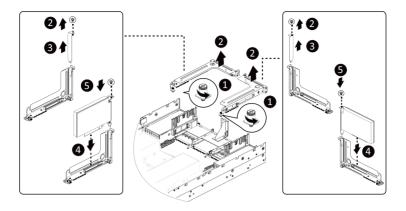

• The PCIe riser assembly does not include a riser card or any cabling as standard. To install a PCIe card, a riser card must be installed.

Follow these instructions to install a PCIe card:

- 1. Loosen the two thumbnail screws securing the riser bracket inside the system.
- 2. Lift up the riser bracket out of system.
- 3. Remove the screw securing the slot cover from riser bracket.
- Orient the PCIe card with the riser guide slot and push in the direction of the arrow until the PCIe card sits in the PCIe card connector.
 NOTE: Some riser brackets allow for single or multiple PCIe cards.
 Repeat steps 3-4 as necessary.
- 5. Secure the PCIe card with the screw.
- 6. Repeat steps 1-2 to install the PCIe card into the system.

3-8 Installing the Mezzanine Card

3-8-1 Installing the OCP 3.0 Mezzanine Card

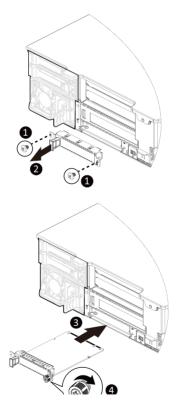

Use of the following type of OCP 3.0 NIC is recommended:

- OCP 3.0 SFF with pull tab
- OCP 3.0 SFF with ejector latch

Follow these instructions to install an OCP 3.0 Mezzanine card:

- 1. Remove the two screws securing the OCP 3.0 card slot cover.
- 2. Remove the slot cover from the system.
- Insert the OCP 3.0 card into the card slot ensuring that the card is firmly connected to the connector on the motherboard.
- 4. Tighten the thumbnail screw to secure the OCP 3.0 card in place.
- 5. Reverse steps 3-4 to replace the OCP 3.0 card.

3-9 Replacing the Fan Assembly

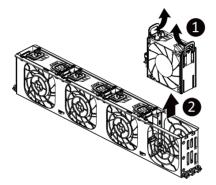

• Voltages can be present within the server whenever an AC power source is connected. This voltage is present even when the main power switch is in the off position. Ensure that the system is powered-down and all power sources have been disconnected from the server prior to replacing a system fan.

Failure to observe these warnings could result in personal injury or damage to equipment.

Follow these instructions to replace a fan assembly:

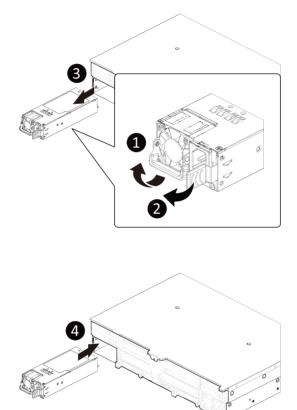

- 1. Flip the latches on the top of the fan outwards.
- 2. Using the latches, lift up the fan assembly from the chassis.
- 3. Reverse the previous steps to install the replacement fan assembly.

3-10 Removing and Installing the Power Supply

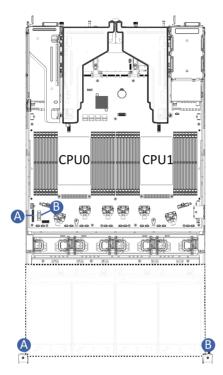

Follow these instructions to replace the power supply:

- 1. Flip up and then grasp the power supply handle.
- 2. Press the retaining clip on the right side of the power supply unit in the direction indicated.
- 3. Pull out the power supply unit using the handle.
- 4. Insert the replacement power supply unit firmly into the chassis. Connect the AC power cord to the replacement power supply.
- 5. Repeat steps 1-4 for replacement of the second power supply.

| 3 | SlimLine SAS Connector (SFF-8654 4i/SL_SAS0) |

Chapter 5 BIOS Setup

BIOS (Basic Input and Output System) records hardware parameters of the system in the EFI on the motherboard. Its major functions include conducting the Power-On Self-Test (POST) during system startup, saving system parameters, loading the operating system etc. The BIOS includes a BIOS Setup program that allows the user to modify basic system configuration settings or to activate certain system features. When the power is turned off, the battery on the motherboard supplies the necessary power to the CMOS to keep the configuration values in the CMOS.

To access the BIOS Setup program, press the key during the POST when the power is turned on.

- BIOS flashing is potentially risky, if you do not encounter any problems when using the current BIOS version, it is recommended that you don't flash the BIOS. To flash the BIOS, do it with caution. Inadequate BIOS flashing may result in system malfunction.
- It is recommended that you not alter the default settings (unless you need to) to prevent system instability or other unexpected results. Inadequately altering the settings may result in system's failure to boot. If this occurs, try to clear the CMOS values and reset the board to default values. (Refer to the Exit section in this chapter or introductions of the battery/clearing CMOS jumper in Chapter 1 for how to clear the CMOS values.)

BIOS Setup Program Function Keys

| <←><→> | Move the selection bar to select the screen |
|-----------------|---|
| <↑><↓> | Move the selection bar to select an item |
| <+> | Increase the numeric value or make changes |
| <-> | Decrease the numeric value or make changes |
| <enter></enter> | Execute command or enter the submenu |
| <esc></esc> | Main Menu: Exit the BIOS Setup program |
| | Submenus: Exit current submenu |
| <f1></f1> | Show descriptions of general help |
| <f3></f3> | Restore the previous BIOS settings for the current submenus |
| <f9></f9> | Load the Optimized BIOS default settings for the current submenus |
| <f10></f10> | Save all the changes and exit the BIOS Setup program |
| | |

Main

This setup page includes all the items of the standard compatible BIOS.

Advanced

This setup page includes all the items of AMI BIOS special enhanced features.

(ex: Auto detect fan and temperature status, automatically configure hard disk parameters.)

Chipset

This setup page includes all the submenu options for configuring the functions of the Platform Controller Hub.

Server Management

Server additional features enabled/disabled setup menus.

Security

Change, set, or disable supervisor and user password. Configuration supervisor password allows you to restrict access to the system and BIOS Setup.

A supervisor password allows you to make changes in BIOS Setup.

A user password only allows you to view the BIOS settings but not to make changes.

Boot

This setup page provides items for configuration of the boot sequence.

Save & Exit

Save all the changes made in the BIOS Setup program to the CMOS and exit BIOS Setup. (Pressing <F10> can also carry out this task.)

Abandon all changes and the previous settings remain in effect. Pressing <Y> to the confirmation message will exit BIOS Setup. (Pressing <Esc> can also carry out this task.)

5-1 The Main Menu

Once you enter the BIOS Setup program, the Main Menu (as shown below) appears on the screen. Use arrow keys to move among the items and press <Enter> to accept or enter other sub-menu.

Main Menu Help

The on-screen description of a highlighted setup option is displayed on the bottom line of the Main Menu.

Submenu Help

While in a submenu, press <F1> to display a help screen (General Help) of function keys available for the menu. Press <Esc> to exit the help screen. Help for each item is in the Item Help block on the right side of the submenu.

When the system is not stable as usual, select the **Restore Defaults** item to set your system to its defaults.

The BIOS Setup menus described in this chapter are for reference only and may differ by BIOS version.

|--|---|
| COM1 Console Redirection Settings (continued) | Parity A parity bit can be sent with the data bits to detect some transmission errors. Even: parity bit is 0 if the num of 1's in the data bits is even. Odd: parity bit is 0 if num of 1's in the data bits is odd. Mark: parity bit is always 1. Space: Parity bit is always 0. Mark and Space Parity do not allow for error detection. Options available: None, Even, Odd, Mark, Space. Default setting is None. Stop Bits Stop bits indicate the end of a serial data packet. (A start bit indicates the beginning). The standard setting is 1 stop bit. Communication with slow devices may require more than 1 stop bit. Options available: 1, 2. Default setting is 1. Flow Control Flow Control can prevent data loss from buffer overflow. When sending data, if the receiving buffers are full, a 'stop' signal can be sent to re-start the flow. Hardware flow control uses two wires to send start/stop signals. Options available: None, Hardware RTS/CTS. Default setting is None. VT-UTF8 Combo Key Support Enable/Disable the VT-UTF8 Combo Key Support. Options available: Enabled, Disabled. Default setting is Enabled. Recorder Mode When this mode enabled, only texts will be send. This is to capture Terminal data. Options available: Enabled, Disabled. Default setting is Enabled. Resolution 100x31 Enable/Disable extended terminal resolution. Options available: Enabled, Disabled. Default setting is Enabled. Putty KeyPad |

| Serial Port for Out-of-Band Management / Windows Emergency Management Services (EMS) Console Redirection ^(Note) | EMS console redirection allows the user to configure Console Redirection Settings to support Out-of-Band Serial Port management. Options available: Enabled, Disabled. Default setting is Disabled . |
| Serial Port for Out-of-Band EMS Console Redirection Settings | Press [Enter] to configure advanced items. Please note that this item is configurable when Serial Port for Out-of-Band Management EMS Console Redirection is set to Enabled. Out-of-Band Mgmt Port Microsoft Windows Emergency Management Service (EMS) allows for remote management of a Windows Server OS through a serial port. Default setting is COM1. Terminal Type EMS Selects a terminal type to be used for console redirection. Options available: VT100, VT100PLUS, VT-UTF8, ANSI. Default setting is VT10PLUS. Bits per second EMS Selects the transfer rate for console redirection. Options available: 9600, 19200, 57600, 115200. Default setting is 115200. Flow Control EMS Flow control EMS Flow control can prevent data loss from buffer overflow. When sending data, if the receiving buffers are full, a 'stop' signal can be sent to stop the data flow. Once the buffers are empty, a 'start' signal can be sent to re-start the flow. Hardware flow control uses two wires to send start/stop signals. Options available: None, Hardware RTS/CTS, Software Xon/Xoff. Default setting is None. |

| BMC network configuration | |
| Select NCSI and Dedicated LAN | Options available: Do Nothing, Model1(Dedicated), Model2(NCSI), Mode3(Failover). Default setting is Do Nothing . |
| Lan Channel 1 | |
| Configuration Address source | Selects to configure LAN channel parameters statically or dynamically (DHCP). Options available: Unspecified, Static, DynamicBmcDhcp. Default setting is DynamicBmcDhcp . |
| Station IP address | Displays IP Address information. |
| Subnet mask | Displays Subnet Mask information. Please note that the IP address must be in three digitals, for example, 192.168.000.001. |
| Router IP address | Displays the Router IP Address information. |
| Station MAC address | Displays the MAC Address information. |
| Real-time get BMC network address | Press [Enter] will set LAN mode and Address source and then get IP, Subnet, Gateway and MAC address. |

5-4-5 IPv6 BMC Network Configuration

| Parameter | Description |
|---|---|
| IPv6 BMC network configuration | |
| IPv6 BMC Lan Channel 1 | |
| IPv6 BMC Lan Option | Enable/Disable IPv6 BMC LAN channel function. When this item is disabled, the system will not modify any BMC network during BIOS phase. Options available: Unspecified, Disable, Enable. Default setting is Enable. |
| IPv6 BMC Lan IP Address Source | Selects to configure LAN channel parameters statically or dynamically (by BIOS or BMC). Options available: Unspecified, Static, Dynamic-Obtained by BMC running DHCP. Default setting is Dynamic-Obtained by BMC running DHCP . |
| IPv6 BMC Lan IP Address/ Prefix Length | Check if the IPv6 BMC LAN IP address matches those displayed on the screen. |

5-5 Security Menu

The Security menu allows you to safeguard and protect the system from unauthorized use by setting up access passwords.

| Main Advanced Chipset | Aptio Setup – Al Server Mgmt <mark>Security Boo</mark> t | |
|---|---|--|
| Password Description | | Sets administrative password |
| If ONLY the Administrator' then this only limits acce only asked for when enter! If ONLY the User's passwor is a power on password and boot or enter Setup. In Se have Administrator rights. The password length must b in the following range: | ss to Setup and is ng Setup. d is set, then this must be entered to tup the User will | |
| Minimum length | 3 | |
| Maximum length | 20 | ++: Select Screen |
| | | î↓: Select Item |
| Administrator Password User Password | | K/M: Scroll Help Area Up/Down. Enter: Select +/-: Change Opt. F1: General Help |
| ▶ Secure Boot | | F3: Previous Values F9: Optimized Defaults F10: Save & Exit ESC: Exit |
| | Version 2 22 1287 Conurigh: | + (P) 9099 AWT |

There are two types of passwords that you can set:

Administrator Password

Entering this password will allow the user to access and change all settings in the Setup Utility.

User Password

Entering this password will restrict a user's access to the Setup menus. To enable or disable this field, a Administrator Password must first be set. A user can only access and modify the System Time, System Date, and Set User Password fields.

| Parameter | Description |
|------------------------|--|
| Administrator Password | Press [Enter] to configure the administrator password. |
| User Password | Press [Enter] to configure the user password. |
| Secure Boot | Press [Enter] to configure advanced items. |

5-5-1 Secure Boot

The Secure Boot feature is applicable if supported by your Operating System.

If your Operating System is not supporting Secure Boot, the system will hang when starting the Operating System.

| System Mode | Setup | Secure Boot feature is Active if Secure Boot is |

| | | F9: Optimized Defaults |
| | | F10: Save & Exit ESC: Exit |

| Parameter | Description |
|------------------------------------|---|
| System Mode | Displays if the system is in User mode or Setup mode. |
| Secure Boot | Enable/ Disable the Secure Boot function. Options available: Enabled, Disabled. Default setting is Disabled . |
| Secure Boot Mode ^(Note) | Secure Boot requires all the applications that are running during the booting process to be pre-signed with valid digital certificates. This way, the system knows all files being loaded before the Operating System loads to the login screen have not been tampered with. When set to Standard, it will automatically load the Secure Boot keys form the BIOS databases. When set to Custom, you can customize the Secure Boot settings and manually load its keys from the BIOS database. Options available: Standard, Custom. Default setting is Standard . |
| Restore Factory Keys | Forces the system to user mode and installs factory default Secure Boot key database. |
| Reset To Setup Mode | Reset the system to Setup Mode. |

(Note) Advanced items prompt when this item is set to Custom.

| Parameter | Description |
|----------------|---|
| Key Management | Press [Enter] to configure advanced items. Please note that this item is configurable when Secure Boot Mode is set to Custom. Factory Key Provision Allows to provision factory default Secure Boot keys when system is in Setup Mode. Options available: Enabled, Disabled. Default setting is Disabled. Restore Factory Keys Installs all factory default keys. It will force the system in User Mode. Options available: Yes, No. Reset To Setup Mode Reset To Setup Mode Reset the system to Setup Mode. Options available: Yes, No. Enroll Efi Image Press [Enter] to enroll SHA256 hash of the binary into Authorized Signature Database (db). Export Secure Boot variables Copy NVRAM content of Secure Boot variables to files in a root folder on a file system device. Secure Boot variable Displays the current status of the variables used for secure boot. Platform Key (PK) Displays the current status of the Platform Key (PK). Press [Enter] to configure a new PK. Options available: Update. Key Exchange Keys (KEK) Displays the current status of the Key Exchange Key Database (KEK). Press [Enter] to configure a new KEK or load additional KEK from storage devices. Options available: Update, Append. Authorized Signatures (DB) Displays the current status of the Authorized Signature Database. Press [Enter] to configure a new DB or load additional DB from storage devices. Options available: Update, Append. Forbidden Signatures (DBX) Displays the current status of the Forbidden Signature Database. Press [Enter] to configure a new dbs or load additional dbs from storage devices. Options available: Update, Append. |

| Parameter | Description | |
|-------------------------------|---|--|
| Key Management (continued) | Authorized TimeStamps (DBT) Displays the current status of the Authorized TimeStamps Database. Press [Enter] to configure a new DBT or load additional DBT from storage devices. Options available: Update, Append. OsRecovery Signatures Displays the current status of the OsRecovery Signature Database. Press [Enter] to configure a new OsRecovery Signature or load additional OsRecovery Signature from storage devices. Options available: Update, Append. | |

5-6 Boot Menu

The Boot menu allows you to set the drive priority during system boot-up. BIOS setup will display an error message if the legacy drive(s) specified is not bootable.

| Aptio Setup – AMI Main Advanced Chipset Server Mgmt Security <mark>Boot</mark> Save & Exit | | |

Version 2.22.1287 Copyright (C) 2022 AMI

| Parameter | Description |
|---------------------------|---|
| Save Options | |
| Save and Exit | Saves changes made and closes the BIOS setup. Options available: Yes, No. |
| Discard changes and exit | Discards changes made and exits the BIOS setup. Options available: Yes, No. |
| Save Changes and Reset | Restarts the system after saving the changes made. Options available: Yes, No. |
| Discard Changes and Reset | Restarts the system without saving any changes. Options available: Yes, No. |
| Save Changes | Saves changes done so far to any of the setup options. Options available: Yes, No. |
| Discard Changes | Discards changes made and closes the BIOS setup. Options available: Yes, No. |
| Default Options | |

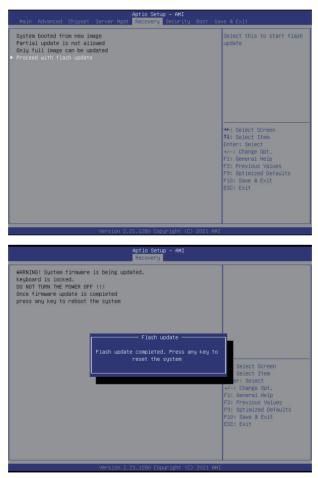

| Parameter | Description |
|------------------------------------|--|
| Restore Defaults | Loads the default settings for all BIOS setup parameters. Setup Defaults are quite demanding in terms of resources consumption. If you are using low-speed memory chips or other kinds of low-performance components and you choose to load these settings, the system might not function properly. Options available: Yes, No. |
| Save the User Default Values | Saves the changes made as the user default settings. Options available: Yes, No. |
| Restore the User Default Values | Loads the user default settings for all BIOS setup parameters. Options available: Yes, No. |
| Boot Device Priority | Press [Enter] to configure the device as the boot-up drive. |
| Launch EFI Shell | Attempts to Launch EFI Shell application (Shell.efi) from one of the available file system devices. |

5-8 BIOS Recovery

The system has an embedded recovery technique. In the event that the BIOS becomes corrupt the boot block can be used to restore the BIOS to a working state. To restore your BIOS, please follow the instructions listed below:

Recovery Instruction:

- 1. Copy the XXX.rom to USB diskette.
- 2. Setting BIOS Recovery jump to enabled status.
- 3. Boot into BIOS recovery.
- 4. Run Proceed with flash update.
- 5. BIOS updated.

5-9 BIOS POST Beep code (AMI standard)

5-9-1 PEI Beep Codes

| # of Beeps | Description |
|------------|--|
| 1 | Memory not Installed. |
| 1 | Memory was installed twice (InstallPeiMemory routine in PEI Core called twice) |
| 2 | Recovery started |
| 3 | DXEIPL was not found |
| 3 | DXE Core Firmware Volume was not found |
| 4 | Recovery failed |
| 4 | S3 Resume failed |
| 7 | Reset PPI is not available |

5-9-2 DXE Beep Codes

| # of Beeps | Description |
|------------|---|
| 1 | Invalid password |
| 4 | Some of the Architectural Protocols are not available |
| 5 | No Console Output Devices are found |
| 5 | No Console Input Devices are found |
| 6 | Flash update is failed |
| 7 | Reset protocol is not available |
| 8 | Platform PCI resource requirements cannot be met |
