Documentation Classifications

In order to assist in the use of this product, GIGABYTE provides the following types of documentation:

- User Manual: detailed information & steps about the installation, configuration and use of this product (e.g. motherboard, server barebones), covering hardware and BIOS.
- User Guide: detailed information about the installation & use of an add-on hardware or software component (e.g. BMC firmware, rail-kit) compatible with this product.
- Quick Installation Guide: a short guide with visual diagrams that you can reference easily for installation purposes of this product (e.g. motherboard, server barebones).

Please see the support section of the online product page to check the current availability of these documents.

For More Information

For related product specifications, the latest firmware and software, and other information please visit our website at http://www.gigabyte.com

For GIGABYTE distributors and resellers, additional sales & marketing materials are available from our reseller portal: http://reseller.b2b.gigabyte.com

For further technical assistance, please contact your GIGABYTE representative or visit https://esupport.gigabyte.com/ to create a new support ticket

For any general sales or marketing enquiries, you may also message GIGABYTE server directly by email: server.grp@gigabyte.com

Conventions

The following conventions are used in this user's guide:

	**NOTE!** Gives bits and pieces of additional information related to the current topic.
	**CAUTION!** Gives precautionary measures to avoid possible hardware or software problems.
	**WARNING!** Alerts you to any damage that might result from doing or not doing specific actions.

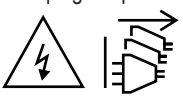
Server Warnings and Cautions

Before installing a server, be sure that you understand the following warnings and cautions.

WARNING!

To reduce the risk of electric shock or damage to the equipment:

- Do not disable the power cord grounding plug. The grounding plug is an important safety feature.
- Plug the power cord into a grounded (earthed) electrical outlet that is easily accessible at all times.
- Unplug the power cord from the power supply to disconnect power to the equipment.



- Shock Hazard! Disconnect all power supply cords before servicing.
- Do not route the power cord where it can be walked on or pinched by items placed against it. Pay particular attention to the plug, electrical outlet, and the point where the cord extends from the server.
- Do not route the power cord where it can be walked on or pinched by items placed against it. Pay particular attention to the plug, electrical outlet, and the point where the cord extends from the server.

WARNING!

To reduce the risk of personal injury from hot surfaces, allow the drives and the internal system components to cool before touching them.

This server is equipped with high speed fans. Keep away from hazardous moving fan blades during servicing.

This equipment is intended to be used in Restrict Access Location. The access can only be gained by Skilled person. Only authorized by well trained professional person can access the restrict access location.

•

This equipment is not intended for use by children.

CAUTION!

- Do not operate the server for long periods with the access panel open or removed. Operating the server in this manner results in improper airflow and improper cooling that can lead to thermal damage.
- Danger of explosion if battery is incorrectly replaced.
- Replace only with the same or equivalent type recommended by the manufacturer.
- Dispose of used batteries according to the manufacturer's instructions.

CAUTION!

Risk of explosion if battery is replaced incorrectly or with an incorrect type. Replace the battery only with the same or equivalent type recommended by the manufacturer. Dispose of used batteries according to the manufacturer's instructions.

Warning Stability hazard

The slide-rail may tip over causing serious personal injury

- Before extending the rack to its installation position, read the installation instructions.
- Do not put any load on the slide-rail mounted equipment in the installation position.
- Do not leave the slide-rail mounted equipment in the installation position.

Electrostatic Discharge (ESD)

CAUTION!

ESD CAN DAMAGE DRIVES, BOARDS, AND OTHER PARTS. WE RECOMMEND THAT YOU PERFORM ALL PROCEDURES AT AN ESD WORKSTATION. IF ONE IS NOT AVAILABLE, PROVIDE SOME ESD PROTECTION BY WEARING AN ANTI-STATIC WRIST STRAP ATTACHED TO CHASSIS GROUND -- ANY UNPAINTED METAL SURFACE -- ON YOUR SERVER WHEN HANDLING PARTS.

Always handle boards carefully. They can be extremely sensitive to ESD. Hold boards only by their edges without any component and pin touching. After removing a board from its protective wrapper or from the system, place the board component side up on a grounded, static free surface. Use a conductive foam pad if available but not the board wrapper. Do not slide board over any surface.

System power on/off: To remove power from system, you must remove the system from rack. Make sure the system is removed from the rack before opening the chassis, adding, or removing any non hot-plug components.

Hazardous conditions, devices and cables: Hazardous electrical conditions may be present on power, telephone, and communication cables. Turn off the system and discon-nect the cables attached to the system before servicing it. Otherwise, personal injury or equipment damage can result.

Electrostatic discharge (ESD) and ESD protection: ESD can damage drives, boards, and other parts. We recommend that you perform all procedures in this chapter only at an ESD workstation. If one is not available, provide some ESD protection by wearing an antistatic wrist strap attached to chassis ground (any unpainted metal surface on the server) when handling parts.

ESD and handling boards: Always handle boards carefully. They can be extremely sensi-tive to electrostatic discharge (ESD). Hold boards only by their edges. After removing a board from its protective wrapper or from the system, place the board component side up on a grounded, static free surface. Use a conductive foam pad if available but not the board wrapper. Do not slide board over any surface.

Installing or removing jumpers: A jumper is a small plastic encased conductor that slips over two jumper pins. Some jumpers have a small tab on top that can be gripped with fingertips or with a pair of fine needle nosed pliers. If the jumpers do not have such a tab, take care

when using needle nosed pliers to remove or install a jumper; grip the narrow sides of the jumper with the pliers, never the wide sides. Gripping the wide sides can damage the contacts inside the jumper, causing intermittent problems with the function con-trolled by that jumper. Take care to grip with, but not squeeze, the pliers or other tool used to remove a jumper, or the pins on the board may bend or break.

CAUTION!

Risk of explosion if battery is replaced incorrectly or with an incorrect type. Replace the battery only with the same or equivalent type recommended by the manufacturer. Dispose of used batteries according to the manufacturer's instructions.

Table of Contents

Chapter 1 Hardware Installation

1-1 Installation Precautions

The motherboard/system contain numerous delicate electronic circuits and components which can become damaged as a result of electrostatic discharge (ESD). Prior to installation, carefully read the service guide and follow these procedures:

- Prior to installation, do not remove or break motherboard S/N (Serial Number) sticker or warranty sticker provided by your dealer. These stickers are required for warranty validation.
- Always remove the AC power by unplugging the power cord from the power outlet before installing or removing the motherboard or other hardware components.
- When connecting hardware components to the internal connectors on the motherboard, make sure they are connected tightly and securely.
- When handling the motherboard, avoid touching any metal leads or connectors.
- It is best to wear an electrostatic discharge (ESD) wrist strap when handling electronic components such as a motherboard, CPU or memory. If you do not have an ESD wrist strap, keep your hands dry and first touch a metal object to eliminate static electricity.
- Prior to installing the motherboard, please have it on top of an antistatic pad or within an electrostatic shielding container.
- Before unplugging the power supply cable from the motherboard, make sure the power supply has been turned off.
- Before turning on the power, make sure the power supply voltage has been set according to the local voltage standard.
- Before using the product, please verify that all cables and power connectors of your hardware components are connected.
- To prevent damage to the motherboard, do not allow screws to come in contact with the motherboard circuit or its components.
- Make sure there are no leftover screws or metal components placed on the motherboard or within the computer casing.
- Do not place the computer system on an uneven surface.
- Do not place the computer system in a high-temperature environment.
- Turning on the computer power during the installation process can lead to damage to system components as well as physical harm to the user.
- If you are uncertain about any installation steps or have a problem related to the use of the product, please consult a certified computer technician.

1-2 Product Specifications

CPU	◆ 2nd Generation Intel® Xeon® Scalable and Intel® Xeon® Scalable Processors ◆ Intel® Xeon® Platinum Processor, Intel® Xeon® Gold Processor, Intel® Xeon® Silver Processor and Intel® Xeon® Bronze Processor NOTE: If only 1 CPU is installed, some PCIe or memory functions might be unavailable
Chipset	◆ Intel C621 Express Chipset
Memory	◆ 16 x DIMM slots ◆ DDR4 memory supported only ◆ 6-channel memory per processor architecture ◆ RDIMM modules up to 64GB supported ◆ LRDIMM modules up to 128GB supported ◆ Supports Intel® Optane™ DC Persistent Memory (DCPMM) ◆ 1.2V modules: 2933/2666/2400/2133 MHz Maximum verified DCPMM configuration: * Ambient temperature 35°C * 2nd Generation Intel® Xeon® Scalable processor 145W (Max.) * DCPMM 256GB x4 pcs DCPMM installation locations: DIMM_P0_(A1, D1) DIMM_P1_(G1, J1) NOTE: 1. 2933MHz for 2nd Generation Intel® Xeon® Scalable Processors only 2. Intel® Optane™ DC Persistent Memory for 2nd Generation Intel® Xeon® Scalable Processors only 3. The maximum number of DCPMM that can be installed is based on a maximum operating (ambient) temperature of 35°C 4. To enquire about installing a greater number of DCPMM, please consult with your GIGABYTE technical or sales representative
LAN	◆ 2 x 10Gb/s SFP+ LAN ports (QLogic® QL41102) ◆ 2 x 1Gb/s LAN ports ◆ 1 x 10/100/1000 management LAN

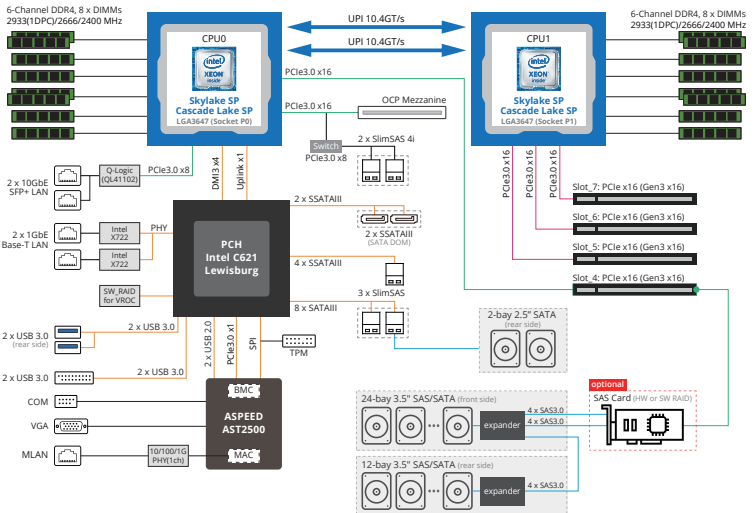
Expansion Slot	◆ Slot_7 (PCIe_4): 1 x PCIe x16 (Gen3 x16 bus) slot from CPU_1 ◆ Slot_6 (PCIe_3): 1 x PCIe x16 (Gen3 x16 bus) slot from CPU_1 ◆ Slot_5 (PCIe_2): 1 x PCIe x16 (Gen3 x16 bus) slot from CPU_1 ◆ Slot_4 (PCIe_1): 1 x PCIe x16 (Gen3 x16 bus) slot from CPU_0 ◆ 1 x Mezzanine card slot: ◆ - PCIe Gen3 x16 (x8+x8) ◆ - From CPU_0 ◆ - Optional for OCP mezzanine card with low profile type
Video	◆ Integrated in Aspeed® AST2500 ◆ 2D Video Graphic Adapter with PCIe bus interface ◆ 1920x1200@60Hz 32bpp, DDR4 SDRAM
Storage	◆ Front side: 24 x 3.5" or 2.5" SATA/SAS hot-swappable HDD/SSD bays ◆ Rear side: 12 x 3.5" or 2.5" SATA/SAS hot-swappable HDD/SSD bays ◆ Rear side booting device bay: 2 x 2.5" hot-swappable SSD bays* NOTE: *For rear side 2.5" bays support Solid State Drives only due to thermal consideration ◆ 2 x Broadcom SAS3x36R expanders ◆ Bandwidth: SATAIII 6Gb/s or SAS 12Gb/s per port ◆ Default configuration supports: ◆ 2 x SAS/SATA drives in rear side ◆ SAS card is required to enable the drive bays ◆ Suggested 12Gb/s SAS cards: ◆ CRA4648 ◆ CSA4648
SAS	◆ Depends on SAS Card
Internal I/O	◆ 2 x SATA 7-pin connectors ◆ 1 x TPM header ◆ 1 x VROC connector
Front I/O	◆ 2 x USB 3.0 ◆ 1 x Power button with LED ◆ 1 x ID button with LED ◆ 1 x NMI button ◆ 1 x System status LED ◆ 4 x LAN activity LEDs

Rear I/O	◆ 2 x USB 3.0 ◆ 1 x VGA ◆ 2 x SFP+ ◆ 2 x RJ45 ◆ 1 x MLAN ◆ 1 x ID button with LED ◆ 2 x LAN activity LEDs
Backplane I/O	◆ Bandwidth: SATAIII 6Gb/s or SAS 12Gb/s per port
TPM	◆ 1 x TPM header with SPI interface ◆ Optional TPM2.0 kit: CTM010
System Management	◆ Aspeed® AST2500 management controller ◆ GIGABYTE Management Console (AMI MegaRAC SP-X) web interface ◆ Dashboard ◆ JAVA Based Serial Over LAN ◆ HTML5 KVM ◆ Sensor Monitor (Voltage, RPM, Temperature, CPU Status …etc.) ◆ Sensor Reading History Data ◆ FRU Information ◆ SEL Log in Linear Storage / Circular Storage Policy ◆ Hardware Inventory ◆ Fan Profile ◆ System Firewall ◆ Power Consumption ◆ Power Control ◆ LDAP / AD / RADIUS Support ◆ Backup & Restore Configuration ◆ Remote BIOS/BMC/CPLD Update ◆ Event Log Filter ◆ User Management ◆ Media Redirection Settings ◆ PAM Order Settings ◆ SSL Settings ◆ SMTP Settings

Power Supply	◆ 2 x 1200W redundant PSUs ◆ 80 PLUS Platinum ◆ AC Input: - 100-240V~/ 12-7A, 50-60Hz ◆ DC Input: - 240Vdc/ 6A ◆ DC Output: - Max 1000W/ 100-240V~ +12V/ 80.5A +12Vsb/ 3A - Max 1200W/ 200-240V~ or 240Vdc input +12V/ 97A +12Vsb/ 3A
Environment Ambient Temperature	◆ Operating temperature: 10°C to 35°C ◆ Operating humidity: 8-80% (non-condensing) ◆ ◆ Non-operating temperature: -40°C to 60°C
Relative Humidity	◆ Non-operating humidity: 20%-95% (non-condensing)
System Dimension	◆ 4U ◆ 482.6mm (W) x 177mm (H) x 625mm (D)

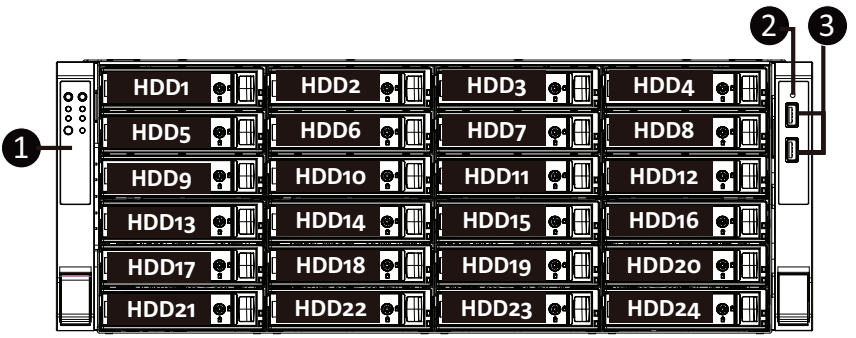
* We reserves the right to make any changes to the product specifications and product-related information without prior notice.

1-3 System Block Diagram



Chapter 2 System Appearance

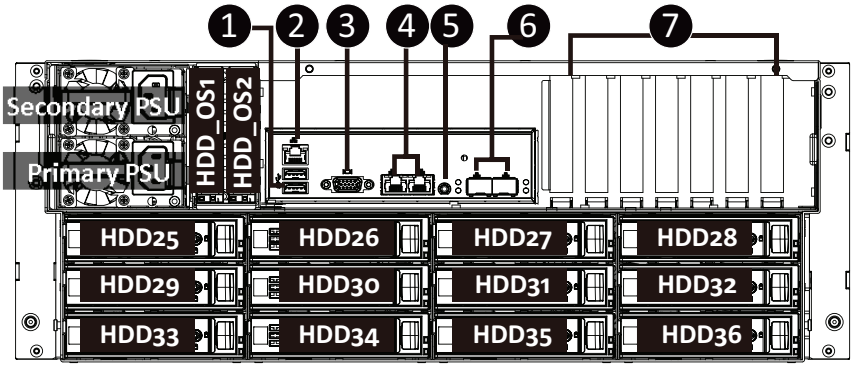
2-1 Front View



No.	Description
1.	Front Panel LEDs and buttons
2.	Reset Switch
3.	Front USB 3.0 ports

- Refer to Chapter **2-3 Front Panel LED** and Buttons for a detailed description of the function of the LEDs.

2-2 Rear View

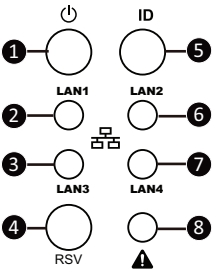


No.	Description
1.	USB 3.0 Port x 2
2.	10/100/1000 Server management LAN port
3.	VGA Port
4.	10Gbe LAN Port x 2
5.	ID Button with LED
6.	10Gbe LAN Port x 2
7.	PCIe Card Bay x 7

- HDD_OS1 and HDD_OS2 are 2.5" hard drives while the remaining hard drives on the front and rear side of the server are 3.5" hard drives.

- Refer to Chapter **2-4 Rear System LAN LEDs** for a detailed description of the function of the LEDs.

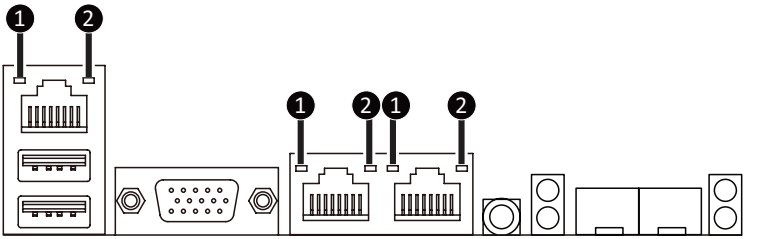
2-3 Front Panel LED and Buttons



No.	Name	Color	Status	Description
1.	Power button with LED	Green	On	Indicates the system is powered on.
		Green	Blink	System is in ACPI S1 state (sleep mode).
		N/A	Off	• System is not powered on or in ACPI S5 state (power off) • System is in ACPI S4 state (hibernate mode)
2.	LAN1 Active/ Link LED	Amber	On	Indicates a link between the system and the network or no access.
		Amber	Blink	Indicates data trasmission or receiving is occuring.
		N/A	Off	Indicates no data transmission or receiving is occuring.
3.	LAN3 Active/ Link LED	Amber	On	Indicates a link between the system and the network or no access.
		Amber	Blink	Indicates data trasmission or receiving is occuring.
		N/A	Off	Indicates no data transmission or receiving is occuring.
4.	Reserved button	N/A	N/A	The button's is reserved for custom functions and behavior.
5.	ID Button with LED	Blue	On	Indicates the system identification is active.
		N/A	Off	Indicates the system identification is disabled.
6.	LAN2 Active/ Link LED	Green	On	Indicates a link between the system and the network or no access.
		Green	Blink	Indicates data trasmission or receiving is occuring.
		N/A	Off	Indicates no data transmission or receiving is occuring.
8.	LAN4 Active/ Link LED	Green	On	Indicates a link between the system and the network or no access.
		Green	Blink	Indicates data trasmission or receiving is occuring.
		N/A	Off	Indicates no data transmission or receiving is occuring.

8.	System Status LED	Green	On	Indicates system is operating normally.
		Amber	On	Indicates a critical condition, may include: -System fan failure -System temperature
			Blink	Indicates non-critical condition, may include: -Redundant power module failure -Temperature and voltage issue
		N/A	Off	Indicates system is not ready, may include: -POST error -NMI error -Processor or terminator is missing

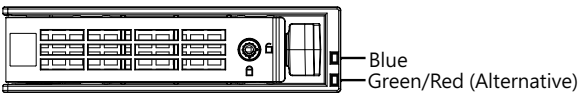
2-4 Rear System LAN LEDs



No.	Name	Color	Status	Description
1.	1GbE Speed LED	Yellow	On	1 Gbps data rate
		Green	On	100 Mbps data rate
		N/A	Off	10 Mbps data rate
2.	1GbE Link/ Activity LED	Green	On	Link between system and network or no access
			Blink	Data transmission or receiving is occurring
		N/A	Off	No data transmission or receiving is occurring

2-5 Hard Disk Drive LEDs

3.5" Hard Drive



Blue LED: Power Indicator. Turned on whenever disk drive is properly installed.

Green LED: Activity indicator. Stay off when idle and blinking whenever disk drive is accessing.

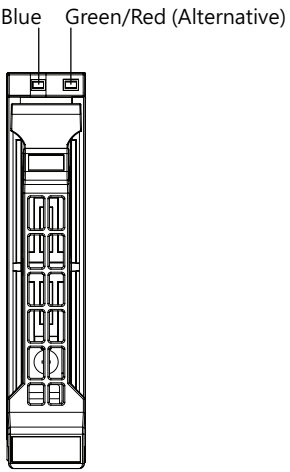
Red LED: Fail and Locate indicator. Turned on when disk failure occurs. Blinking when locate HDD, RAID rebuild and RAID consistent check.

SES Status	Status Description	Red LED (Error)	Green LED (Activity)	Priority (Hex)	SES Control (Hex)
Power-On State (before SES client interventing)					
Forced Condition Cleared	Empty slot or disk unplugged	Off	Off	10	N/A (SEP internal)
Condition Cleared	Disk loaded or inserting	Off	ActFlash	11	N/A (SEP internal)
Informative					
OK		Off	ActFlash	11	RQST OK
Device Off	Power down phy or bay	Off	ActFlash	10	RQST Device Off
Reserved Device Host Spare Do Not Remove	Usually for RAID consistence	Off	ActFlash	0E	RQST RSVD Device RQST Host Spare DO Not Remove
Activity					
Consistence Check (Cons Chk)	Power down phy or bay	Off	ActFlash	03	RQST Cons Chk
Rebuild/ Remap (disk array)	Spare disk summoned for critical RAID rebuild	Off	ActFlash	03	RQST Rebuild/Remap
Active (Activity)		Off	ActFlash	10	RQST Activity

Warning Error					
In Critical Array	Members in degraded RAID	Off	ActFlash	06	RQST in CRIT ARRAY
In Failed Array	Members in broken RAID	On	ActFlash	07	RQST in Failed ARRAY
Rebuild/ Remap Aborted (R/R Abort)	Spare disk summoned for RAID rebuild yet aborted	On	ActFlash	05	RQST R/R ABORT
Fault		On	ActFlash	04	RQST FAULT
Missing		On	ActFlash	04	RQST MISSING
Predict Failing (Fault Sensed)	Dying disk detected by enclosure	On	ActFlash	05	COMMON CONTROL PRDFAIL
Identify & Prompt					
Identify/ Locate		Slow_Blink_1	ActFlash	00	RQST IDTNT
Ready to Insert		Off	ActFlash	0B	RQST INSERT
Ready to Remove	Disk spun down	Off	ActFlash	0C	RQST REMOVE

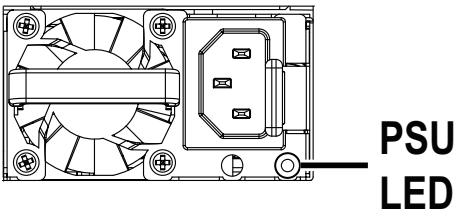
Note:
Blink_1 : 50% On and then Off in a one second circle.
Slow_Blink_1 : 50% On and then Off in a 2 second circle.
ActFlash : Stay off while idle and fast flash upon I/O load.

2.5" Hard Drive



HDD Power LED (Blue)	**When HDD Insert**	**Active**
HDD Power LED (Green/Red)	**When HDD Re-Write**	**Active (Green)**
	When HDD Fail	**Active (Red)**

2-6 Power Supply Unit LED



State	Description
Off	No AC power to all power supplies
GREEN	Output ON and OK
1Hz Blink GREEN	AC present/ only standby on/ Cold redundant mode
2Hz Blink GREEN	Power supply F.W updateing mode
Green BLINKING 0.25 Sec./On 0.25 Sec./Off 2Hz	PSU Sleep Mode (cold Redundant/Offline mode)
Amber	AC cord unplugged or AC power lost; with a second power supply in parallel still with AC input power
	Power supply critical event causing shut down: failure, OCP, OVP, Fan Fail, UVP
1Hz Blink AMBER	Power supply warning events where the power supply continues to operate: high temp, high power, high current, slow fan

This page intentionally left blank

Chapter 3 System Hardware Installation

Pre-installation Instructions

Computer components and electronic circuit boards can be damaged by discharges of static electricity. Working on computers that are still connected to a power supply can be extremely dangerous. Follow the simple guidelines below to avoid damage to your computer or injury to yourself.

- Always disconnect the computer from the power outlet whenever you are working inside the computer case.
- If possible, wear a grounded wrist strap when you are working inside the computer case. Alternatively, discharge any static electricity by touching the bare metal system of the computer case, or the bare metal body of any other grounded appliance.
- Hold electronic circuit boards by the edges only. Do not touch the components on the board unless it is necessary to do so. Do not flex or stress the circuit board.
- Leave all components inside the static-proof packaging until you are ready to use the component for the installation.

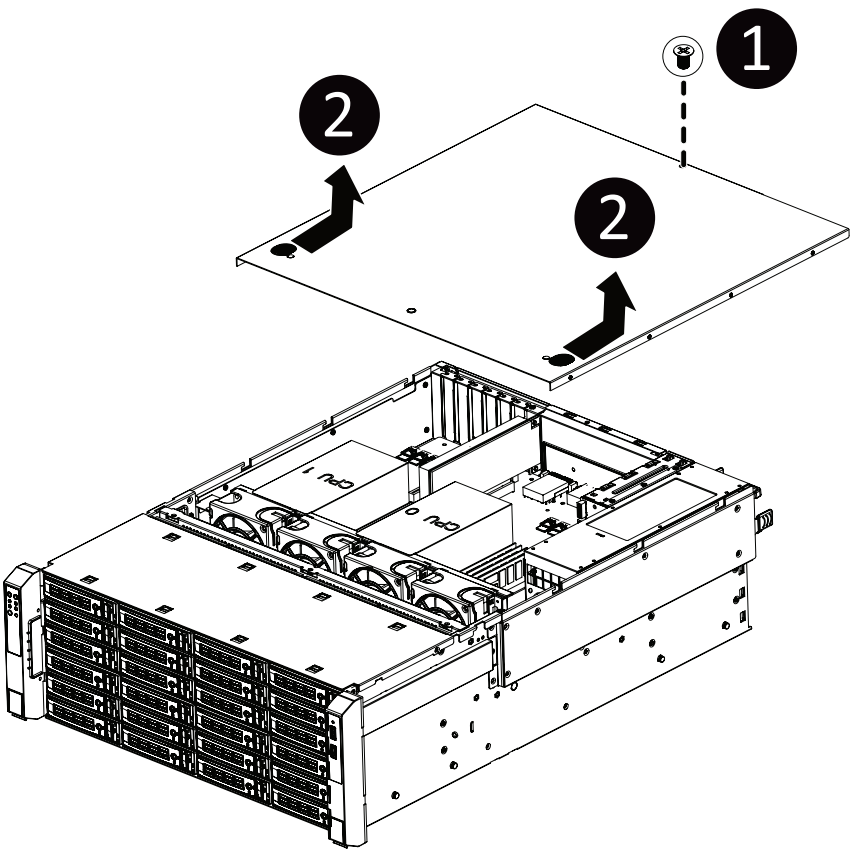
3-1 Removing and Installing the Chassis Cover

Before you remove or install the system cover

- Make sure the system is not turned on or connected to AC power.

Follow these instructions to remove the chassis covers:

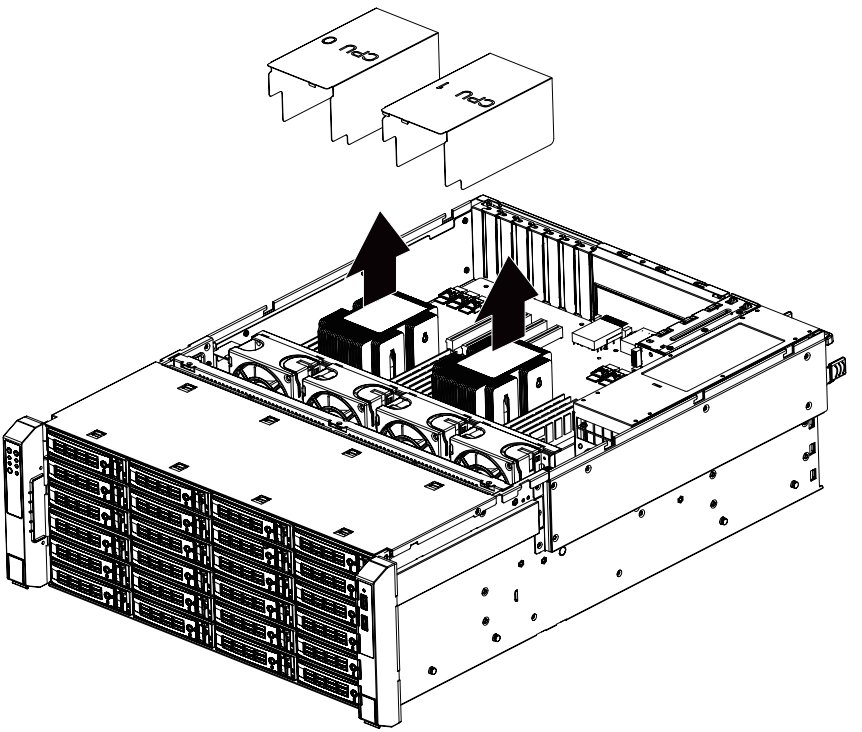
1. Remove the single screw securing the chassis cover.
2. Push down on the indentations located on the side of the chassis cover.
3. Slide the chassis cover to the rear of the system and then remove the cover in the direction of the arrow.
4. To reinstall the chassis cover follow steps 1-3 in reverse order.



3-2 Removing and Installing the Fan Duct

Follow these instructions to remove the fan duct:

1. Lift up to remove the fan duct.
2. To reinstall the fan duct, align the fan duct with the guiding groove. Push down the fan duct until it is firmly seated on the system.



3-3 Removing and Installing the CPU and Heat Sink

Read the following guidelines before you begin to install the CPU:

- •Make sure that the motherboard supports the CPU.
- •Always turn off the computer and unplug the power cord from the power outlet before installing the CPU to prevent hardware damage.
- •Unplug all cables from the power outlets.
- •Disconnect all telecommunication cables from their ports.
- •Place the system unit on a flat and stable surface.
- •Open the system according to the instructions.

WARNING!

Failure to properly turn off the server before you start installing components may cause serious damage. Do not attempt the procedures described in the following sections unless you are a qualified service technician.

Follow these instructions to install the CPU:

1. Align and install the processor on the carrier.
   NOTE: Apply thermal compound evenly on the top of the CPU. Remove the protective cover from the underside of the heat sink.
2. Carefully flip the heatsink over. Then install the carrier assembly on the bottom of the heatsink and make sure the gold arrow is located in the correct direction.
3. Remove the CPU cover.
   NOTE: Save and replace the CPU cover if the processor is removed from its socket.
4. Align the heatsink with the CPU socket by the guide pins and make sure the gold arrow is located in the correct direction. Then place the heatsink onto the top of the CPU socket.
5. To secure the heatsink, tighten the screws in a sequential order (1→2→3→4).
   NOTE: When dissambling the heatsink, loosen the screws in reverse order (4→3→2→1).

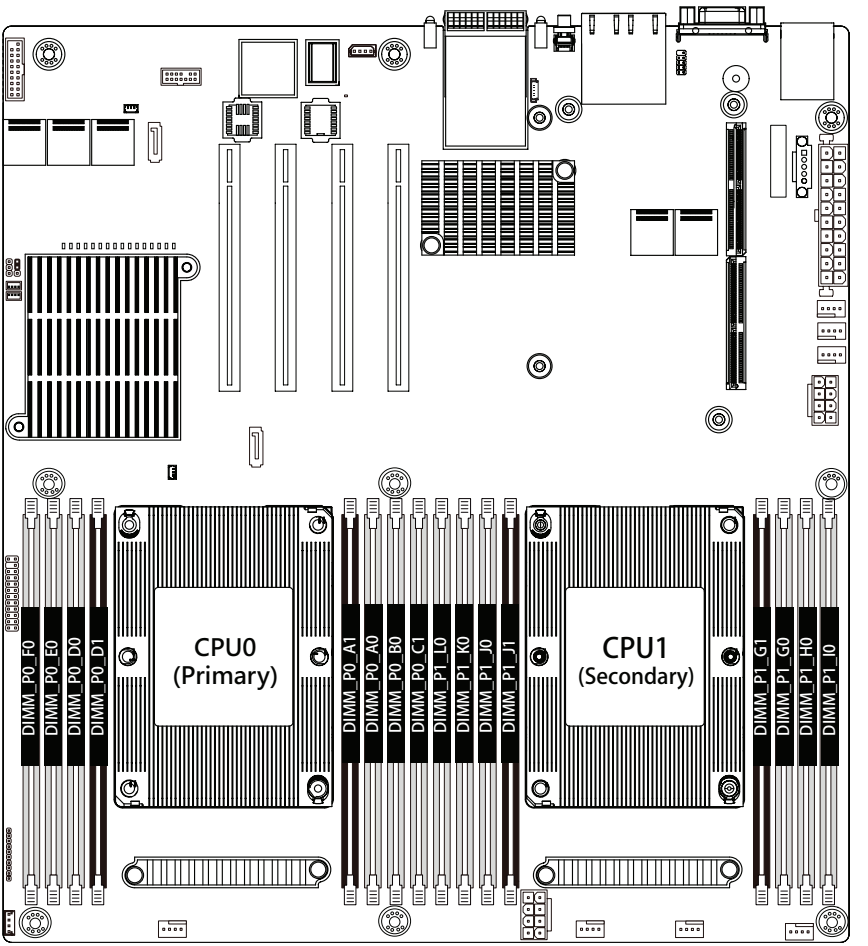
3-4 Removing and Installing Memory

Read the following guidelines before you begin to install the memory:

- Make sure that the motherboard supports the memory. It is recommended that memory of the same capacity, brand, speed, and chips be used.
- Always turn off the computer and unplug the power cord from the power outlet before installing the memory to prevent hardware damage.
- Memory modules have a foolproof design. A memory module can be installed in only one direction. If you are unable to insert the memory, switch the direction.

3-4-1 Six-Channel Memory Configuration

This motherboard provides 16 DDR4 memory sockets and supports Six Channel Technology. After the memory is installed, the BIOS will automatically detect the specifications and capacity of the memory.

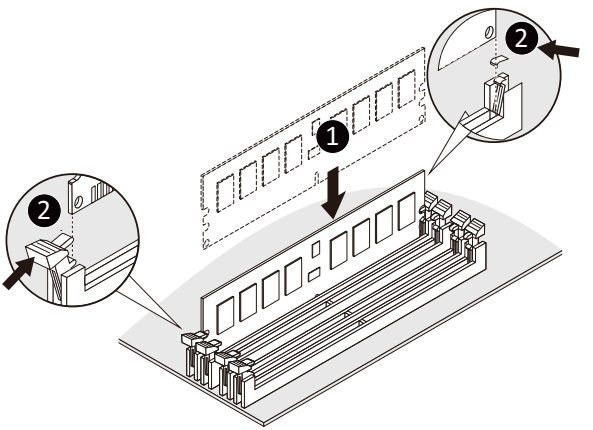


3-4-2 Removing and Installing a Memory Module

Before installing a memory module, make sure to turn off the computer and unplug the power cord from the power outlet to prevent damage to the memory module.
Be sure to install DDR4 DIMMs on to this motherboard.

Follow these instructions to install a DIMM module:

1. Insert the DIMM memory module vertically into the DIMM slot and push it down.
2. Close the plastic clip at both edges of the DIMM slots to lock the DIMM module.
3. Reverse the installation steps when you want to remove the DIMM module.



3-4-3 DIMM Population Table

Be sure to install DDR4 DIMMs on this motherboard.

The initial DIMMs installed must be installed in the primary CPU (CPU0) memory slots first.

When populating DIMMs into a channel, slot numbers having the suffix "0" must be populated first, then followed by slot numbers having the suffix "1".

A combination of LRDIMMs and RDIMMs is not allowed in the same channel.

A combination of non-3DS and 3DS LRDIMMs is not allowed in the same channel.

Type	Ranks Per DIMM and Data Width	DIMM Capacity (GB)			Speed (MT/s); Voltage (V); Slots per Channel(SPC) and DIMM per Channel (DPC)		
					1 Slot Per Channel	2 Slot Per Channel	
		DRAM Density			1DPC	1DPC	2DPC
		4Gb*	8Gb	16Gb	1.2V	1.2V	1.2V
RDIMM	SRx8	4GB	8GB	16GB	2933		
RDIMM	SRx4	8GB	16GB	32GB			
RDIMM	DRx8	8GB	16GB	32GB			
RDIMM	DRx4	16GB	32GB	64GB			
RDIMM 3DS	QRx4	N/A	2H-64GB	2H-128GB			
	8Rx4	N/A	4H-128GB	4H-256GB			
LRDIMM	QRx4	32GB	64GB	128GB			
LRDIMM 3DS	QRx4	N/A	2H-64GB	2H-128GB			
	8Rx4	N/A	4H-128GB	4H-256GB			

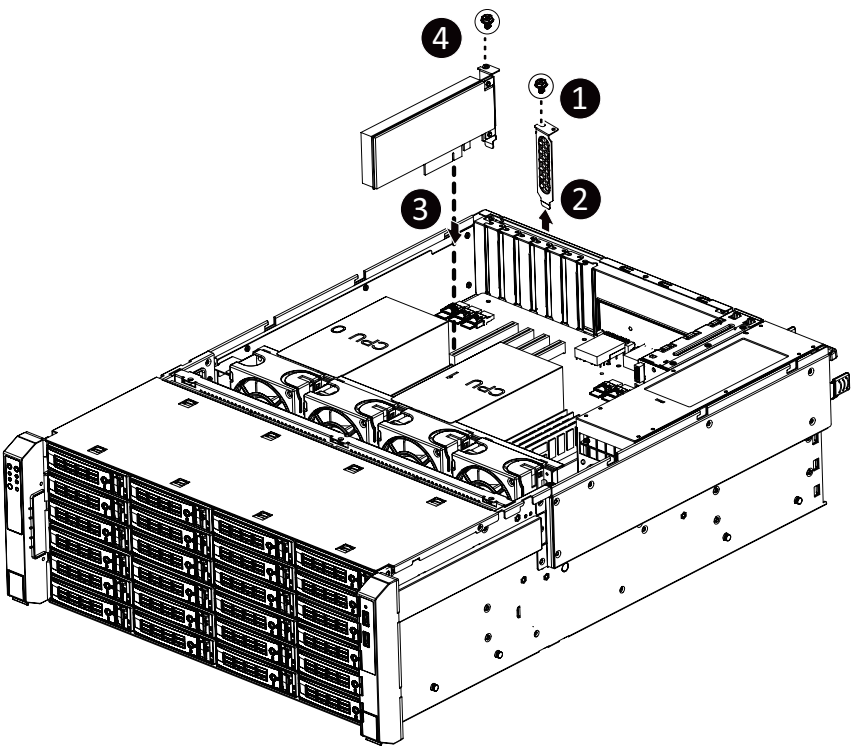
3-5 Removing and Installing the PCI Expansion Card

- Voltages can be present within the server whenever an AC power source is connected. This voltage is present even when the main power switch is in the off position. Ensure that the system is powered off and all power sources have been disconnected from the server prior to installing a PCIe card.
- Failure to observe these warnings could result in personal injury or damage to equipment.

- The PCI riser assembly does not include a riser card or any cabling as standard. To install a PCIe card, a riser card must be installed.

Follow these instructions to PCI Expansion card:

1. Remove the screw on the PCIe slot cover.
2. Remove the PCIe slot cover.
3. Insert the PCIe card into the selected slot. Make sure the PCIe card is properly seated
4. Secure the PCIe card with the screw.



3-6 Removing and Installing the Hard Disk Drive

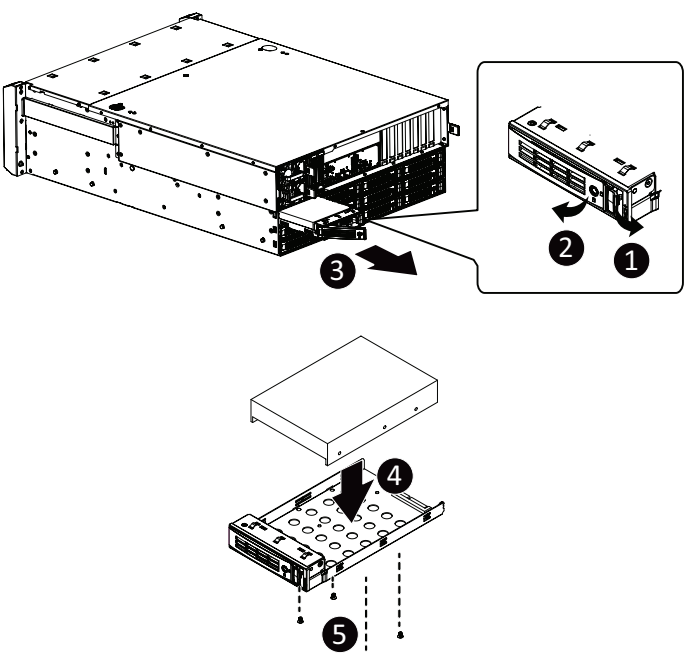
Read the following guidelines before you begin to install the hard disk drive:

- Take note of the drive tray orientation before sliding it out.
- The tray will not fit back into the bay if it is inserted incorrectly.
- Make sure that the HDD is connected to the HDD connector on the backplane.

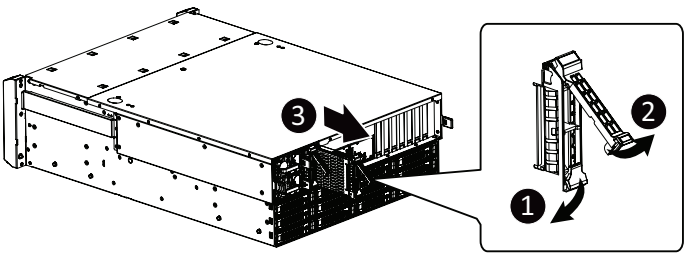
Follow these instructions to install a hard disk drive:

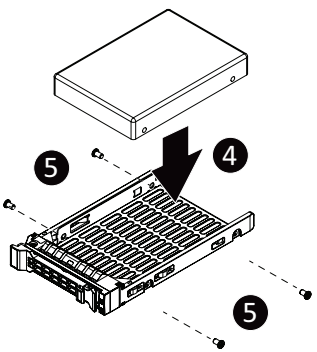
1. Press the release button.
2. Extend the locking lever.
3. Pull the locking lever in the direction of the arrow to remove the HDD tray.
4. Slide the hard disk into the HDD tray.
5. [For 3.5" hard drives]: Install 4 screws to both sides of the hard drive tray to secure the hard drive to the HDD tray.
   [For 2.5" hard drives]: Install 4 screws to the bottom side of the hard drive tray to secure the hard drive to the HDD tray.
6. Reinsert the HDD tray into the slot and close the locking lever.

3.5" Hard Drive



2.5" Hard Drive



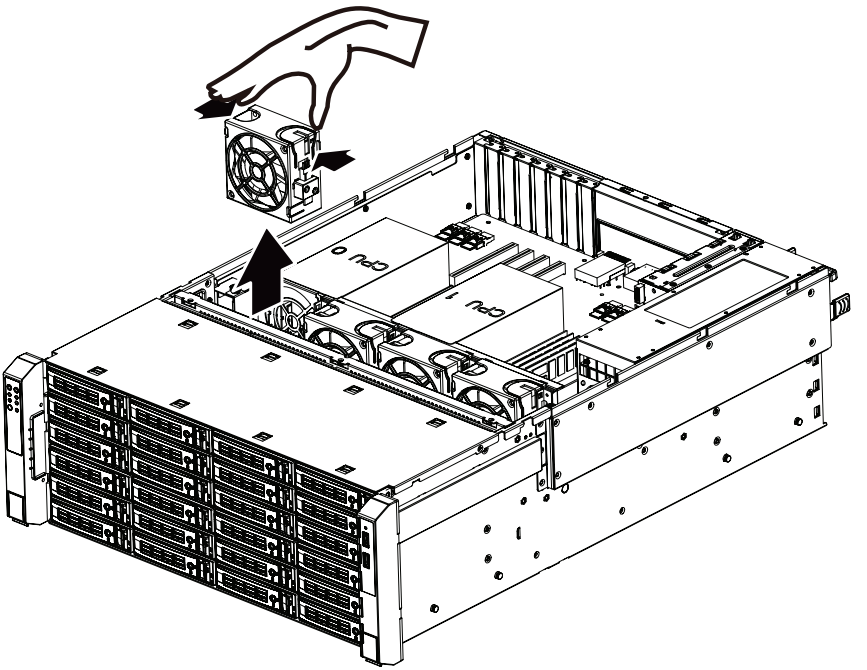


3-7 Replacing the Fan Assembly

Follow these instructions to replace a fan assembly:

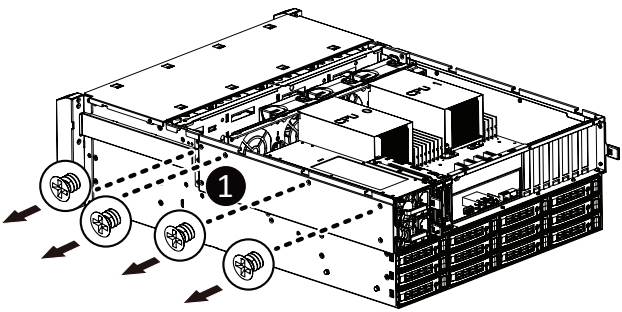
For Top Compartment Fans

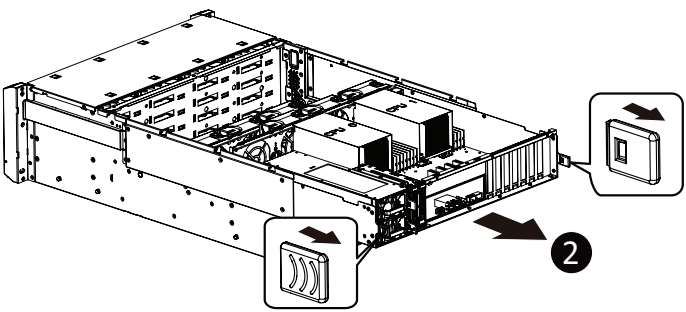
1. Grasp the fan assembly from the left and right side and then push the release buttons while lifting up the fan assembly from the chassis.
2. Reverse the previous steps to install the replacement fan assembly.

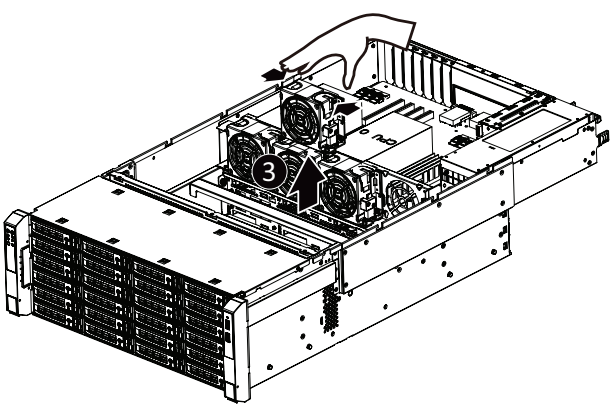


For Bottom Compartment Fans

1. Remove the 4 screws on the right chassis.
2. Use the release levers on the left and right side of the top compartment to pull the top compartment outwards.
3. Grasp the fan assembly from the left and right side and then push the release buttons while lifting up the fan assembly from the chassis.
4. Reverse the previous steps to install the replacement fan assembly.







3-8 Removing and Installing the Power Supply

Before you remove or install the power supply unit:

- Make sure the system is not turned on or connected to AC power.

Follow these instructions to replace the power supply:

1. Flip up the power supply handle.
2. Press the retaining clip on the left side of the power supply unit along the direction of the arrow.
3. Pull the power supply handle at the same time and pull out the power supply unit.
4. Insert the replacement power supply unit firmly into the chassis. Connect the AC power cord to the replacement power supply.
5. Repeat steps 1-3 for replacement of the second power supply.

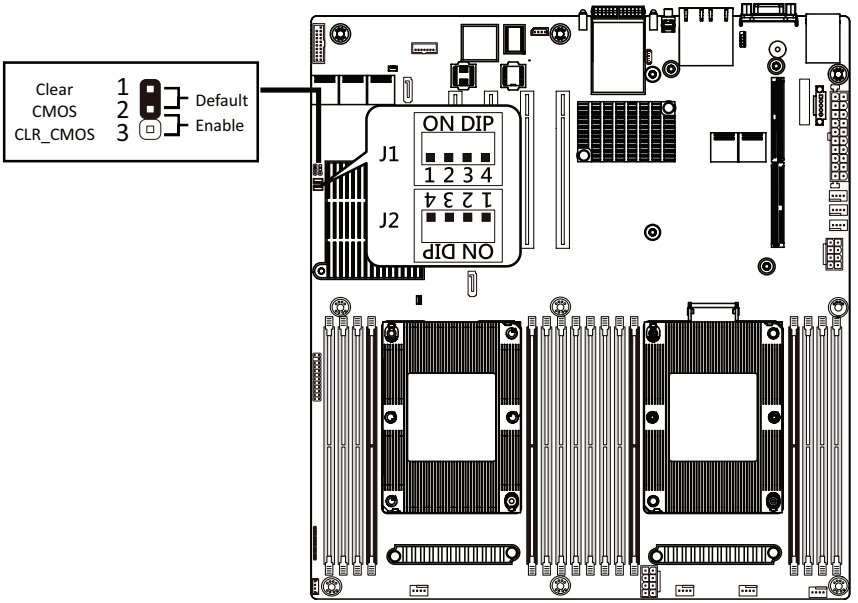
29	Function jumper switch #2
30	Function jumper switch #1
31	Clear CMOS jumper
32	Error LED for DIMM slots
33	USB 3.0 header
34	Slimline connector #1 (SATA 6Gb/s signal/for SATA #0 - #3)
35	Slimline connector #2 (SATA 6Gb/s signal/for SATA #4 - #7)
36	Slimline connector #3 (SATA 6Gb/s signal/for sSATA #0 - #3)
37	SATA 6Gb/s connector #5
38	SSATA DOM support power connector for SSATA port #5
39	TPM connector
40	BMC firmware readiness LED
41	IPMB connector
42	PCIe x16 slot #4 (Gen3 x16)
43	PCIe x16 slot #3 (Gen3 x16)
44	PCIe x16 slot #2 (Gen3 x16)
45	PCIe x16 slot #1 (Gen3 x16)
46	SATA 6Gb/s connector #4
47	SATA DOM support power connector for SSATA port #4

4-2 Jumper Settings



J1		ON	OFF
1	HOST_SMBUS_SEL	BIOS defined	
2	PMBUS_SEL	BIOS defined	
3	S3_MASK	BIOS defined	
4	DB_PLD	CPLD debug mode	Normal [Default]

J2		ON	OFF
1	ME_UPDATE	Force ME update	Normal [Default]
2	BIOS_PWD	Clear supervisor password	Normal [Default]
3	BIOS_RCVR	BIOS recovery mode	Normal [Default]
4	ME_RCVR	ME recovery mode	Normal [Default]

Chapter 5 BIOS Setup

BIOS (Basic Input and Output System) records hardware parameters of the system in the EFI on the motherboard. Its major functions include conducting the Power-On Self-Test (POST) during system startup, saving system parameters and loading operating system, etc. BIOS includes a BIOS Setup program that allows the user to modify basic system configuration settings or to activate certain system features. When the power is turned off, the battery on the motherboard supplies the necessary power to the CMOS to keep the configuration values in the CMOS.

To access the BIOS Setup program, press the <DEL> key during the POST when the power is turned on.

- BIOS flashing is potentially risky, if you do not encounter problems of using the current BIOS version, it is recommended that you don't flash the BIOS. To flash the BIOS, do it with caution. Inadequate BIOS flashing may result in system malfunction.
- It is recommended that you not alter the default settings (unless you need to) to prevent system instability or other unexpected results. Inadequately altering the settings may result in system's failure to boot. If this occurs, try to clear the CMOS values and reset the board to default values. (Refer to the **Exit** section in this chapter or introductions of the battery/clearing CMOS jumper in Chapter 4 for how to clear the CMOS values.)

BIOS Setup Program Function Keys

<←><→>	Move the selection bar to select the screen
<↑><↓>	Move the selection bar to select an item
<+>	Increase the numeric value or make changes
<->	Decrease the numeric value or make changes
<Enter>	Execute command or enter the submenu
<Esc>	Main Menu: Exit the BIOS Setup program Submenus: Exit current submenu
<F1>	Show descriptions of general help
<F3>	Restore the previous BIOS settings for the current submenus
<F9>	Load the Optimized BIOS default settings for the current submenus
<F10>	Save all the changes and exit the BIOS Setup program

- **Main**
  This setup page includes all the items in standard compatible BIOS.
- **Advanced**
  This setup page includes all the items of AMI BIOS special enhanced features.
  (ex: Auto detect fan and temperature status, automatically configure hard disk parameters.)
- **Chipset**
  This setup page includes all the submenu options for configuring the function of processor, network, North Bridge, South Bridge, and System event logs.
- **Server Management**
  Server additional features enabled/disabled setup menus.
- **Security**
  Change, set, or disable supervisor and user password. Configuration supervisor password allows you to restrict access to the system and BIOS Setup.
  A supervisor password allows you to make changes in BIOS Setup.
  A user password only allows you to view the BIOS settings but not to make changes.
- **Boot**
  This setup page provides items for configuration of boot sequence.
- **Save & Exit**
  Save all the changes made in the BIOS Setup program to the CMOS and exit BIOS Setup. (Pressing <F10> can also carry out this task.)
  Abandon all changes and the previous settings remain in effect. Pressing <Y> to the confirmation message will exit BIOS Setup. (Pressing <Esc> can also carry out this task.)

5-1 The Main Menu

Once you enter the BIOS Setup program, the Main Menu (as shown below) appears on the screen. Use arrow keys to move among the items and press <Enter> to accept or enter other sub-menu.

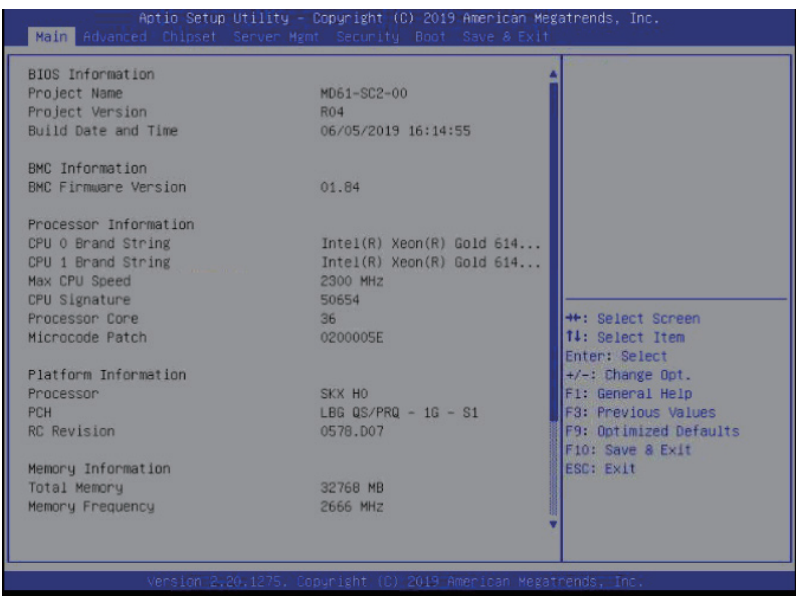
Main Menu Help

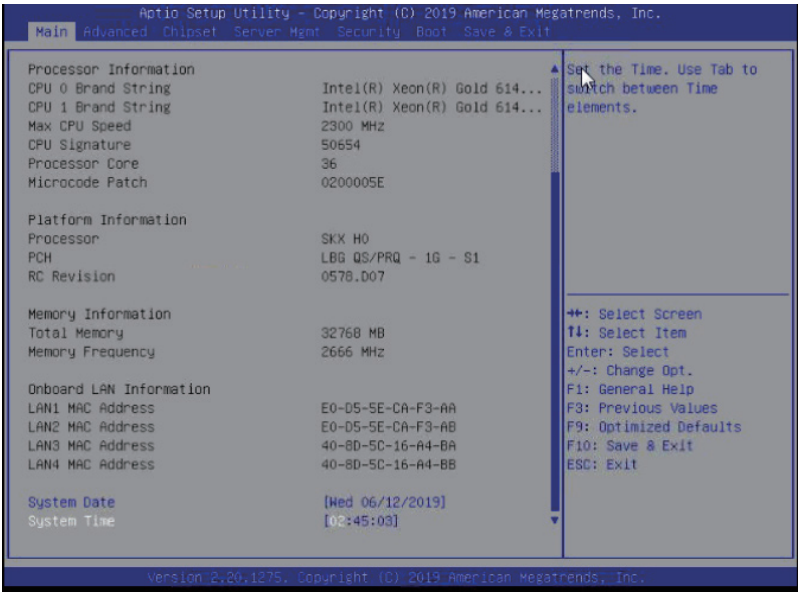
The on-screen description of a highlighted setup option is displayed on the bottom line of the Main Menu.

Submenu Help

While in a submenu, press <F1> to display a help screen (General Help) of function keys available for the menu. Press <Esc> to exit the help screen. Help for each item is in the Item Help block on the right side of the submenu.

- When the system is not stable as usual, select the **Restore Defaults** item to set your system to its defaults.
- The BIOS Setup menus described in this chapter are for reference only and may differ by BIOS version.





Parameter	Description
BIOS Information	
Project Name	Displays the project name information.
Project Version	Displays version number of the BIOS setup utility.
Build Date and Time	Displays the date and time when the BIOS setup utility was created.
BMC Information(Note)	
BMC Firmware Version(Note)	Displays BMC firmware version information.
Processor Information	
CPU 0 Brand String / CPU 1 Brand String / Max CPU Speed / CPU Signature / Processor Core / Microcode Patch	Displays the technical specifications for the installed processor(s).
Platform Information	
Processor / PCH / RC Revision	Displays the information for the installed platform.
Memory Information	
Total Memory(Note)	Displays the total memory size of the installed memory.
Memory Frequency(Note)	Displays the frequency information of the installed memory.

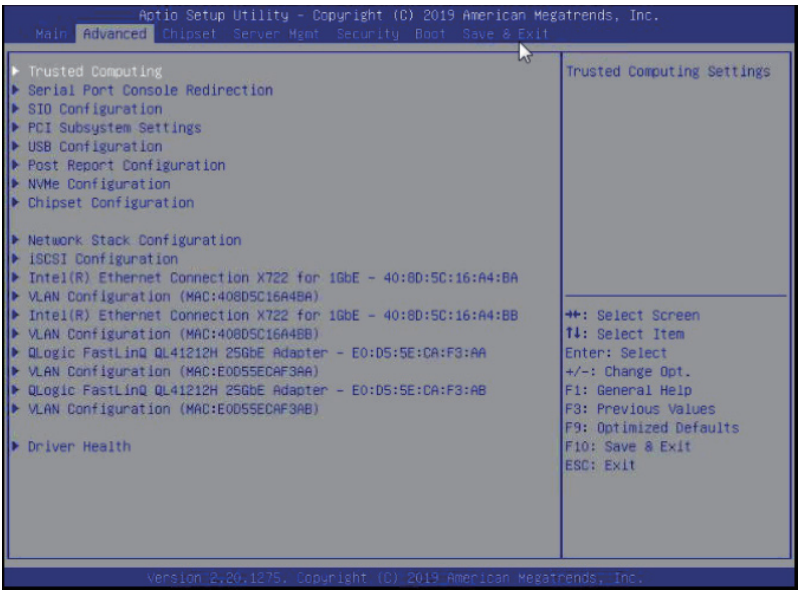
(Note) This section will display capacity and frequency information of the memory that the customer has installed.

Parameter	Description
Onboard LAN Information	
LAN1 MAC Address(Note)	Displays LAN MAC address information.
LAN2 MAC Address (Note)	Displays LAN MAC address information.
System Date	Sets the date following the weekday-month-day-year format.
System Time	Sets the system time following the hour-minute-second format.

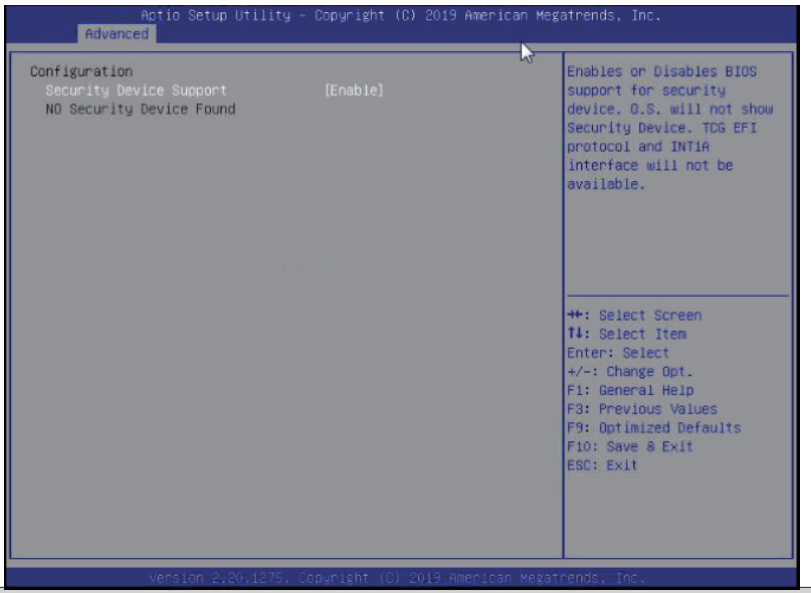
(Note) The number of LAN ports listed will depend on the motherboard / system model.

5-2 Advanced Menu

The Advanced menu display submenu options for configuring the function of various hardware components. Select a submenu item, then press <Enter> to access the related submenu screen.

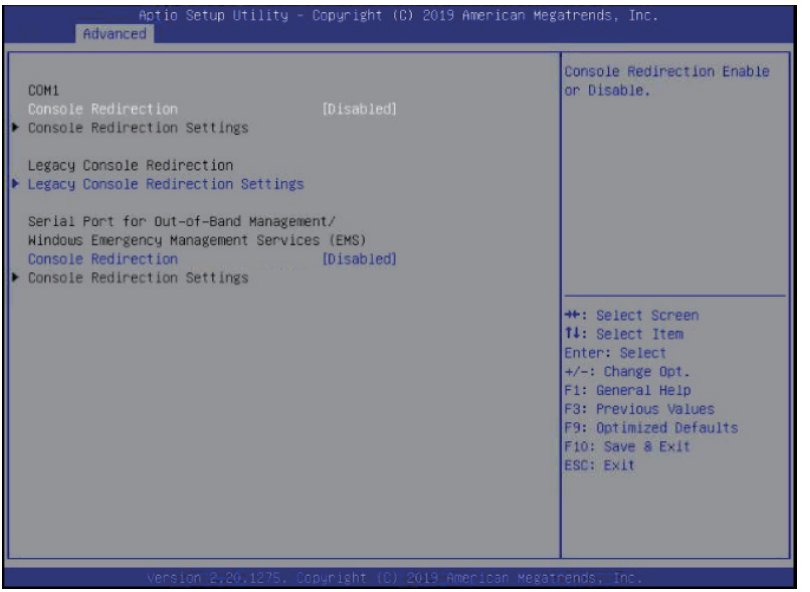


5-2-1 Trusted Computing



Parameter	Description
Configuration	
Security Device Support	Select Enabled to activate TPM support feature. Options available: Enabled/Disabled. Default setting is **Disabled**.

5-2-2 Serial Port Console Redirection



Parameter	Description
COM1 Serial Over LAN Console Redirection(Note)	Select whether to enable console redirection for specified device. Console redirection enables the users to manage the system from a remote location. Options available: Enabled/Disabled. Default setting is **Disabled**.
Legacy Console Redirection	Selects a COM port for Legacy serial redirection. The options are dependent on the available COM ports.
Serial Port for Out-of-Band Management / Windows Emergency Management Services (EMS) Console Redirection(Note)	Selects a COM port for EMS console redirection. EMS console redirection allows the user to configure Console Redirection Settings to support Out-of-Band Serial Port management. Options available: Enabled/Disabled. Default setting is **Disabled**.
COM1 Serial LAN/Legacy/ Serial Port for Out-of-Band EMS Console Redirection Settings	Press [Enter] to configure advanced items. **Please note that this item is configurable when COM1 Serial Over LAN/Serial Port for Out-of-Band Management EMS Console Redirection is set to Enabled.** ◆ Terminal Type – Selects a terminal type to be used for console redirection. – Options available: VT100/VT100+/ANSI /VT-UTF8. Default setting is **ANSI**.

(Note) Advanced items prompt when this item is defined.

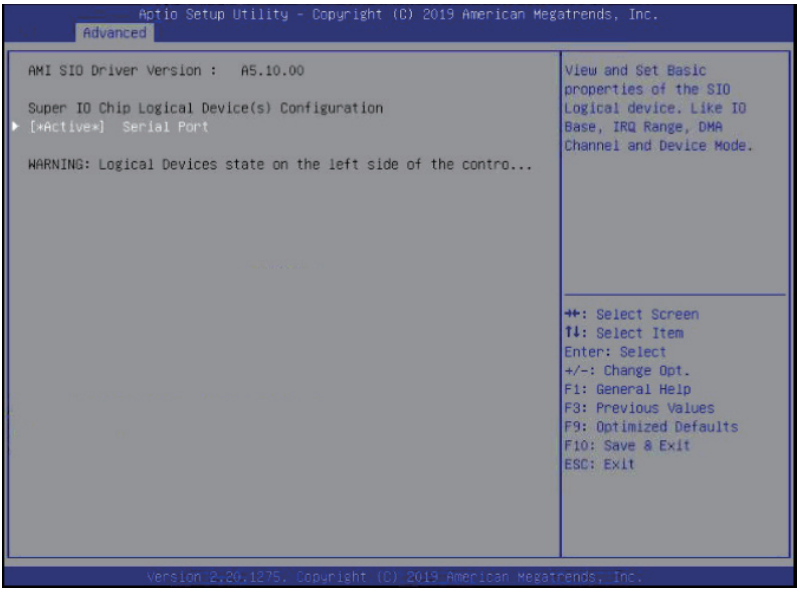
Parameter	Description
COM1 Serial LAN/Legacy/ Serial Port for Out-of-Band EMS Console Redirection Settings (continued)	◆ Bits per second – Selects the transfer rate for console redirection. – Options available: 9600/19200/38400/57600/115200. Default setting is **115200**. ◆ Data Bits – Selects the number of data bits used for console redirection. – Options available: 7/8. Default setting is **8**. ◆ Parity – A parity bit can be sent with the data bits to detect some transmission errors. – Even: parity bit is 0 if the num of 1's in the data bits is even. – Odd: parity bit is 0 if num of 1's in the data bits is odd. – Mark: parity bit is always 1. Space: Parity bit is always 0. – Mark and Space Parity do not allow for error detection. – Options available: None/Even/Odd/Mark/Space. Default setting is **None**. ◆ Stop Bits – Stop bits indicate the end of a serial data packet. (A start bit indicates the beginning). The standard setting is 1 stop bit. Communication with slow devices may require more than 1 stop bit. – Options available: 1/2. Default setting is **1**. ◆ Flow Control – Flow control can prevent data loss from buffer overflow. When sending data, if the receiving buffers are full, a 'stop' signal can be sent to stop the data flow. Once the buffers are empty, a 'start' signal can be sent to re-start the flow. Hardware flow control uses two wires to send start/stop signals. – Options available: None/Hardware RTS/CTS. Default setting is **None**. ◆ VT-UTF8 Combo Key Support – Enable/Disable the VT-UTF8 Combo Key Support. – Options available: Enabled/Disabled. Default setting is **Enabled**. ◆ Recorder Mode(Note) – When this mode enabled, only texts will be send. This is to capture Terminal data. – Options available: Enabled/Disabled. Default setting is **Disabled**. ◆ Resolution 100x31(Note) – Enable/Disable extended terminal resolution. – Options available: Enabled/Disabled. Default setting is **Enabled**.

(Note) Advanced items prompt when this item is defined.

Parameter	Description
COM1/Serial LAN/Legacy/ Serial Port for Out-of-Band EMS Console Redirection Settings (continued)	◆ Legacy OS Redirection Resolution(Note) – Specifies the number of Rows and Columns supported for the Legacy OS redirection. – Options available: 80x24/80x25. Default setting is **80x24**. ◆ Putty KeyPad(Note) – Selects FunctionKey and KeyPad on Putty. – Options available: T100/LINUX/XTERMR6/SCO/ESCN/VT400. Default setting is **VT100**. ◆ Redirection After BIOS POST(Note) – This item allows user to enable console redirection after OS has loaded. – Options available: Always Enable/Boot Loader. Default setting is Always **Enable**. ◆ Legacy Console Redirection Settings – Selects a COM port to display redirection of Legacy OS and Legacy OPROM Messages. – Options available: COM1/Serial Over LAN. Default setting is **COM1**. ◆ Out-of-Band Mgmt Port – Microsoft Windows Emergency Management Service (EMS) allows for remote management of a Windows Server OS through a serial port. – Options available: COM1/COM2 Serial Over LAN. Default setting is **COM1**.

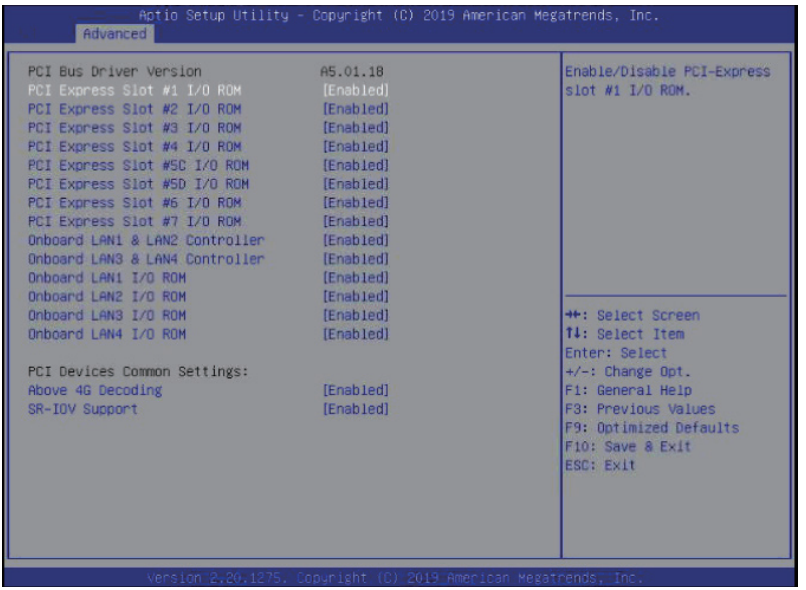
(Note) Advanced items prompt when this item is defined.

5-2-3 SIO Configuration



Parameter	Description
AMI SIO Driver Version	Displays the AMI SIO driver version information.
Super IO Chip Logical Device(s) Configuration	
[*Active*] Serial Port	Press [Enter] to configure advanced items. ◆ Use This Device – When set to Enabled allows you to configure the serial port settings. When set to Disabled, displays no configuration for the serial port. – Options available: Enabled/Disabled. Default setting is **Enabled**. ◆ Current: – Displays the serial port base I/O address and IRQ. ◆ Possible: – Configures the serial port base I/O address and IRQ. Use Automatic Settings IO=3F8h; IRQ=4; DMA; IO=3F8h; IRQ=3, 4, 5, 7, 9, 10, 11, 12; DMA; IO=2F8h; IRQ=3, 4, 5, 7, 9, 10, 11, 12; DMA; IO=3E8h; IRQ=3, 4, 5, 7, 9, 10, 11, 12; DMA; IO=2E8h; IRQ=3, 4, 5, 7, 9, 10, 11, 12; DMA; Default setting is **Use Automatic Settings**.

5-2-4 PCI Subsystem Settings

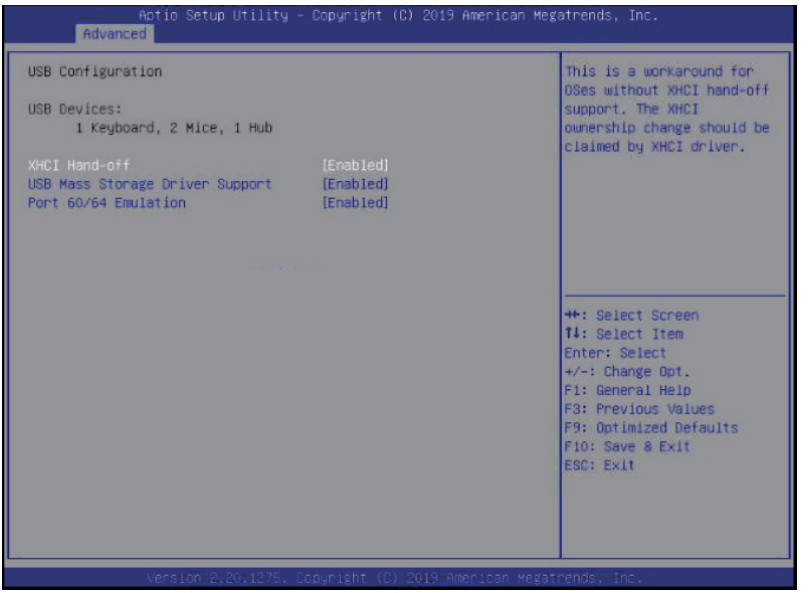


Parameter	Description
PCI Bus Driver Version	Displays the PCI Bus Driver version information.
PCI Express Slot # I/O ROM [Note1]	When enabled, this setting will initialize the device expansion ROM for the related PCI-E slot. Options available: Enabled/Disabled. Default setting is **Enabled**.
Onboard LAN1 / LAN2 / LAN3 / LAN4 Controller[Note2]	Enable/Disable the onboard LAN1 / LAN2 / LAN3 / LAN4 devices. Options available: Enabled/Disabled. Default setting is **Enabled**.
Onboard LAN1 / LAN2 / LAN3 / LAN4 I/O ROM[Note2]	Enable/Disable the onboard LAN1 / LAN2 / LAN3 / LAN4 devices, and initializes device expansion ROM. Options available: Enabled/Disabled. Default setting is **Enabled**.
PCI Devices Common Settings	
Above 4G Decoding	Enable/Disable memory mapped I/O to 4GB or greater address space (Above 4G Decoding). Options available: Enabled/Disabled. Default setting is **Enabled**.

(Note1) This section is dependent on the available PCIe Slot.
(Note2) This section is dependent on the available LAN controller.

SR-IOV Support	If the system has SR-IOV capable PCIe devices, this item Enable/Disable Single Root IO Virtualization Support. Options available: Enabled/Disabled. Default setting is **Enabled**.

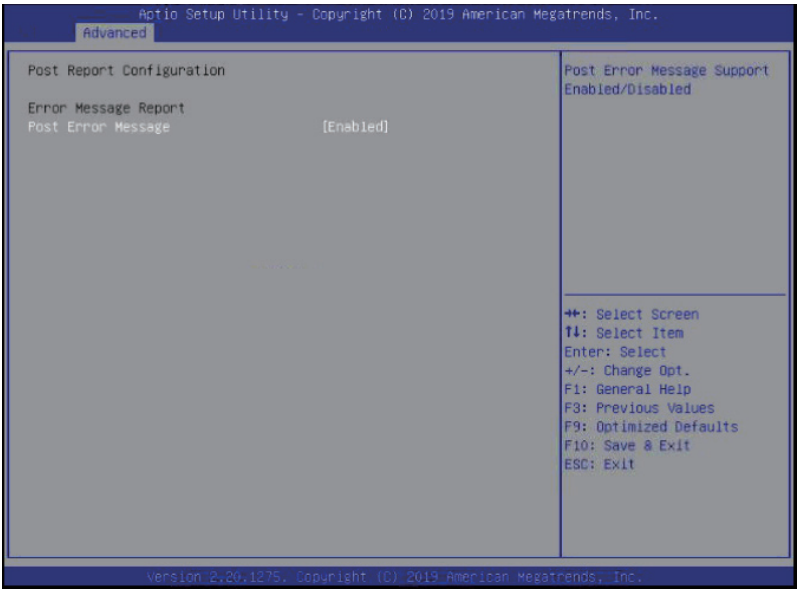
5-2-5 USB Configuration



Parameter	Description
USB Configuration	
USB Devices:	Displays the USB devices connected to the system.
XHCI Hand-off	Enable/Disable the XHCI (USB 3.0) Hand-off support. Options available: Enabled/Disabled. Default setting is **Enabled**.
USB Mass Storage Driver Support(Note)	Enable/Disable the USB Mass Storage Driver Support. Options available: Enabled/Disabled. Default setting is **Enabled**.
Port 60/64 Emulation	Enables the I/O port 60h/64h emulation support. This should be enabled for the complete USB Keyboard Legacy support for non-USB aware OS. Options available: Enabled/Disabled. Default setting is **Enabled**.

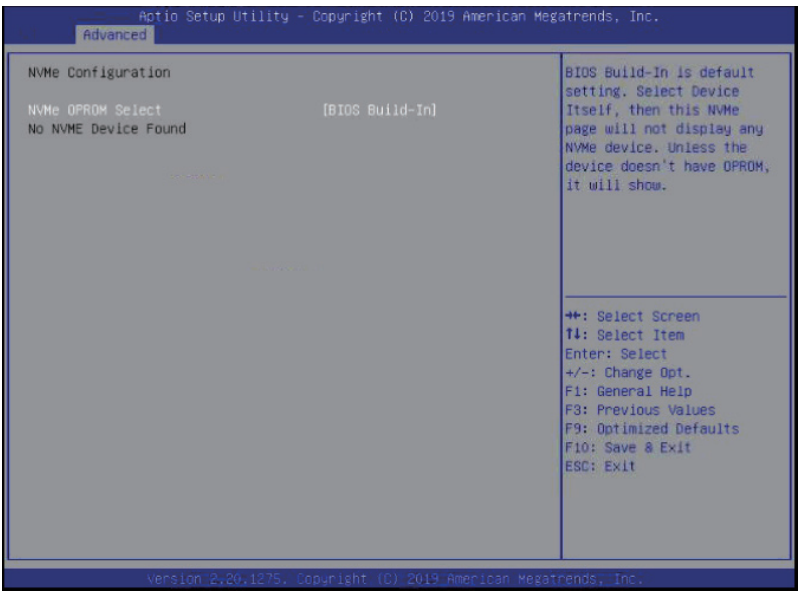
(Note) This item is present only if you attach USB devices.

5-2-6 Post Report Configuration



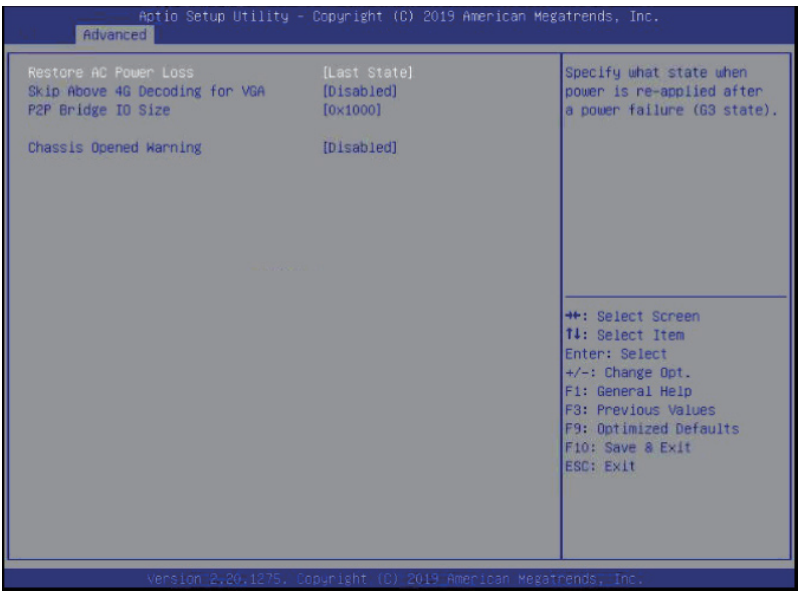
Parameter	Description
Post Report Configuration	
Error Message Report	
Post Error Message	Enable/Disable the POST Error Message support. Options available: Enabled/Disabled. Default setting is **Enabled**.

5-2-7 NVMe Configuration



Parameter	Description
NVMe Configuration	Displays the NVMe devices connected to the system.
NVMe OPROM Select	Options available: BIOS Build-In/NVMe Device. Default setting is **BIOS Build-In**.

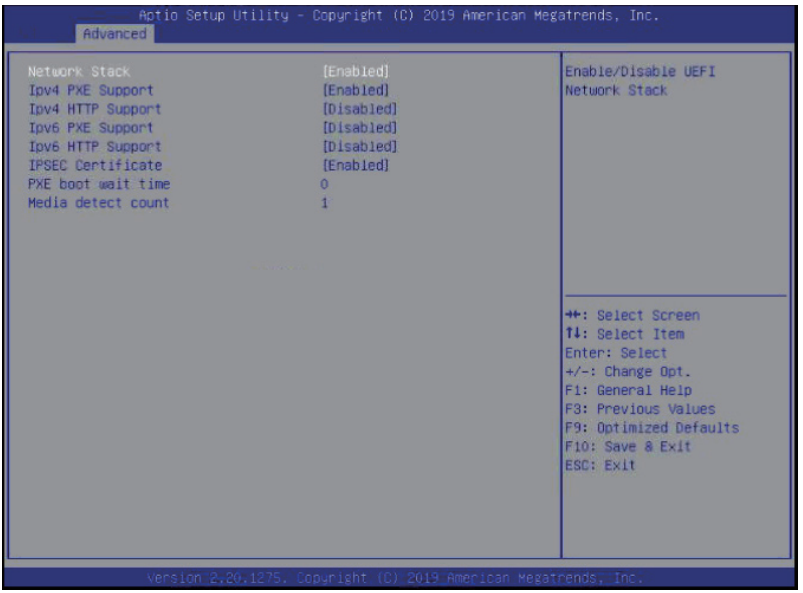
5-2-8 Chipset Configuration



Parameter	Description
Restore AC Power Loss(Note)	Defines the power state to resume to after a system shutdown that is due to an interruption in AC power. When set to Last State, the system will return to the active power state prior to shutdown. When set to Power Off, the system remains off after power shutdown. Options available: Last State/Power Off/Power On. The default setting depends on the BMC setting.
Skip Above 4G Decoding for VGA	Enable/Disable 64bit capable devices to be decoded in Skip Above 4G Address VGA Space. Options available: Enabled/Disabled. Default setting is **Disabled**.
P2P Bridge IO Size	Sets P2P Bridge IO aligned to the size. Options available: 0x100/0x150/0x1000. Default setting is **0x1000**.
Chassis Opened Warning	Enable/Disable the chassis intrusion alter function. Options available: Enabled/Disabled/Clear. Default setting is **Disabled**.

(Note) When the power policy is controlled by BMC, please wait for 15-20 seconds for BMC to save the last power state.

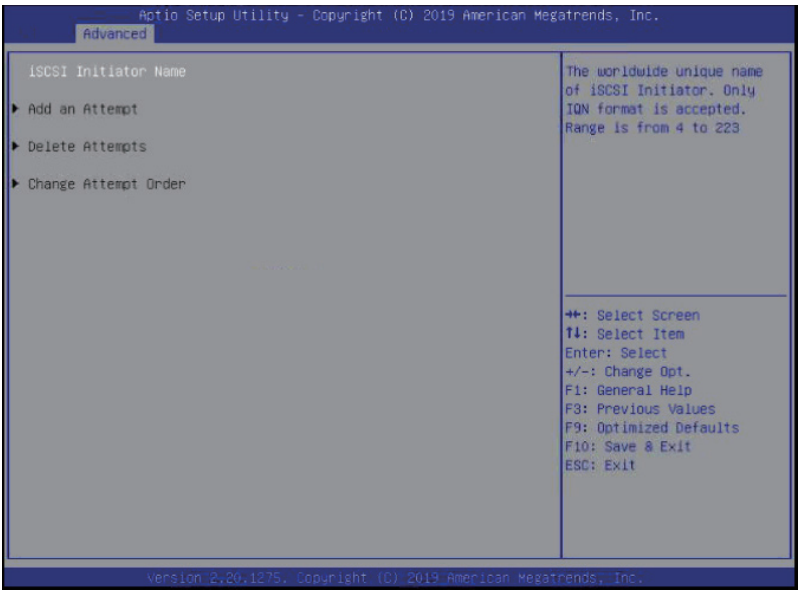
5-2-9 Network Stack Configuration



Parameter	Description
Network Stack	Enable/Disable the UEFI network stack. Options available: Enabled/Disabled. Default setting is **Enabled**.
Ipv4 PXE Support(Note)	Enable/Disable the Ipv4 PXE feature. Options available: Enabled/Disabled. Default setting is **Enabled**.
Ipv4 HTTP Support(Note)	Enable/Disable the Ipv4 HTTP feature. Options available: Enabled/Disabled. Default setting is **Disabled**.
Ipv6 PXE Support(Note)	Enable/Disable the Ipv6 PXE feature. Options available: Enabled/Disabled. Default setting is **Disabled**.
Ipv6 HTTP Support(Note)	Enable/Disable the Ipv6 HTTP feature. Options available: Enabled/Disabled. Default setting is **Disabled**.
IPSEC Certificate(Note)	Enable/Disable IPSEC certificate for Ikev. Options available: Enabled/Disabled. Default setting is **Enabled**.
PXE boot wait time(Note)	Wait time in seconds to press ESC key to abort the PXE boot. Press the <+> / <-> keys to increase or decrease the desired values.
Media detect count(Note)	Number of times the presence of media will be checked. Press the <+> / <-> keys to increase or decrease the desired values.

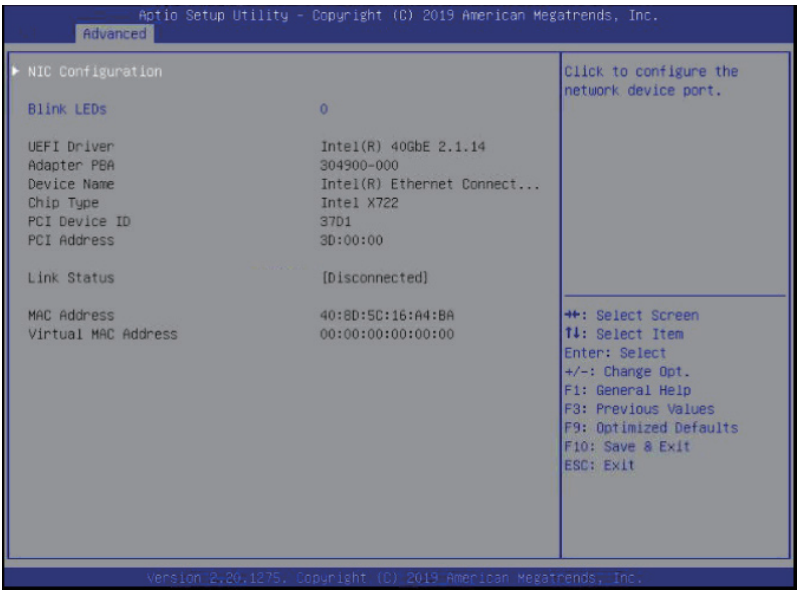
(Note) This item appears when **Network Stack** is set to **Enabled**.

5-2-10 iSCSI Configuration



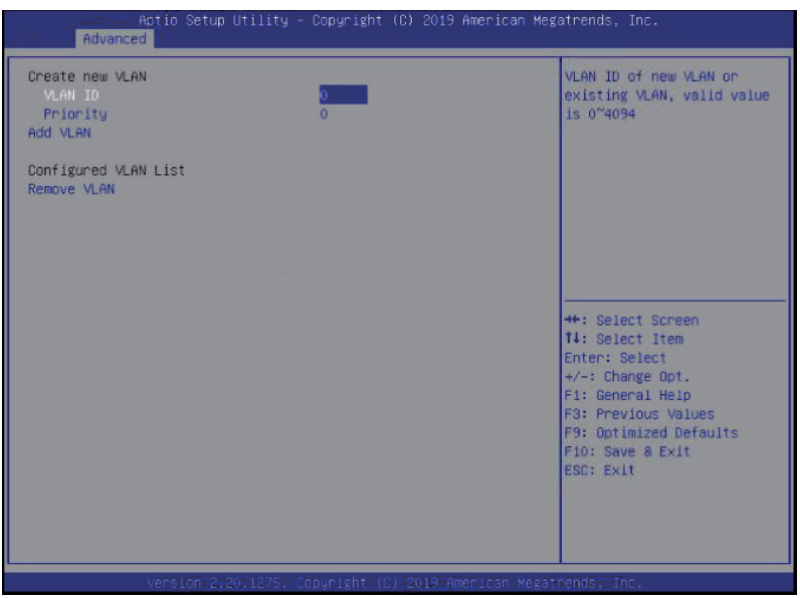
Parameter	Description
iSCSI Initiator Name	
Add an Attempt	Press [Enter] to configure advanced items.
Delete Attempts	Press [Enter] to configure advanced items.
Change Attempt Order	Press [Enter] to configure advanced items.

5-2-11 Intel(R) I210 Gigabit Network Connection



Parameter	Description
NIC Configuration	Press [Enter] to configure advanced items. ◆ Link Speed – Allows for automatic link speed adjustment. – Options available: Auto Negotiated/10 Mbps Half/10 Mbps Full/100 Mbps Half/100 Mbps Full. Default setting is **Auto Negotiated**. ◆ Wake On LAN – Enables power on of the system via LAN. Note that configuring Wake on LAN in the operating system does not change the value of this setting, but does override the behavior of Wake on LAN in OS controlled power states. – Options available: Enabled/Disabled. Default setting is **Enabled**.
Blink LEDs	Identifies the physical network port by blinking the associated LED. Press the numeric keys to adjust desired values.
UEFI Driver	Displays the technical specifications for the Network Interface Controller.
Adapter PBA	Displays the technical specifications for the Network Interface Controller.
Device Name	Displays the technical specifications for the Network Interface Controller.
Chip Type	Displays the technical specifications for the Network Interface Controller.
PCI Device ID	Displays the technical specifications for the Network Interface Controller.
PCI Address	Displays the technical specifications for the Network Interface Controller.
Link Status	Displays the technical specifications for the Network Interface Controller.
MAC Address	Displays the technical specifications for the Network Interface Controller.
Virtual MAC Address	Displays the technical specifications for the Network Interface Controller.

5-2-12 VLAN Configuration



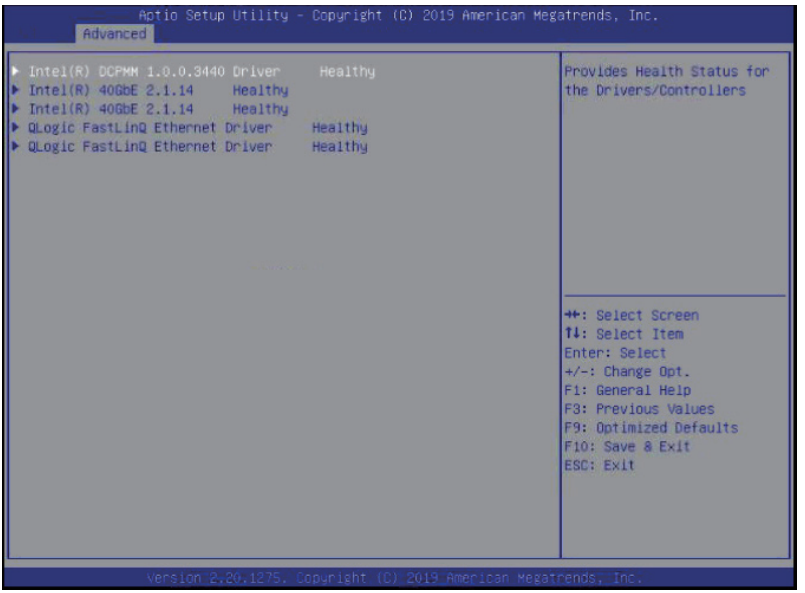
Parameter	Description
Enter Configuration Menu	Press [Enter] to configure advanced items. ◆ Create new VLAN ◆ VLAN ID – Sets VLAN ID for a new VLAN or an existing VLAN. – Press the <+> / <-> keys to increase or decrease the desired values. – The valid range is from 0 to 4094. ◆ Priority – Sets 802.1Q Priority for a new VLAN or an existing VLAN. – Press the <+> / <-> keys to increase or decrease the desired values. – The valid range is from 0 to 7. ◆ Add VLAN – Press [Enter] to create a new VLAN or update an existing VLAN. ◆ Configured VLAN List – Enable/Disable the VLAN. – Options available: Enable/Disable. Default setting is **Disable**. ◆ Remove VLAN – Press [Enter] to remove an existing VLAN.

5-2-13 QLogic FastLinQ

Parameter	Description
Firmware Image Properties	Press [Enter] to view detailed version information for the firmware. ◆ Family Firmware Version ◆ MFW Version ◆ UEFI Driver Version
Device Level Configuration	Press [Enter] to configure advanced items. ◆ SR-I0V – Enable/Disable SRI0V. – Options available: Enabled/Disabled. Default setting is **Disabled**. ◆ MFW Crash Dump Feature – Enable to allow MFW to collect critical device and system information during unanticipated system crash. – Options available: Enabled/Disabled. Default setting is **Enabled**. ◆ UEFI Driver Debug Level – Enables UEFI Driver Debug logging, per configured hexadecimal values e.g. 0xF, enabled ERROR, WARNING, and INFO logging. Please consult technicians for more information.

Port Level Configuration	Press [Enter] to configure advanced items. ◆ Link Speed – Allows for automatic link speed adjustment. – Options available: Auto Negotiated/1 Gbps/10 Gbps/SmartAN. Default setting is **Auto Negotiated**. ◆ Boot Mode – Select the preferred boot protocol or disable. – Options available: PXE/Disabled. Default setting is **PXE**. ◆ DCBX Protocol – Enables/Disables DCB Protocol. – Options available: Disabled/IEEE/CEE/Dynamic. Default setting is **Dynamic**. ◆ RoCE Priority – Enter desired RoCE Priority within a range of 0 to 7 ◆ PXE VLAN Mode – Configure virtual LAN mode. – Options available: Enabled/Disabled. Default setting is: **Disabled**. ◆ Link Up Delay – Maximum amount of time in seconds UEFI or Legacy driver will wait for Management FW to bring-up the link. ◆ RDMA Protocol Support – Specifiy which Remote Direct Memory Access Protocol is to be used. – Options available: None/RoCE/IWARP. Default setting is: **RoCE**
Partition Mode	Select the desired port partitioning mode. Options available: Default/NPAR. Default setting is: **Default**
Device Name	Displays the technical specifications for the Network Interface Controller.
Chip Type	Displays the technical specifications for the Network Interface Controller.
PCI Device ID	Displays the technical specifications for the Network Interface Controller.
PCI Address	Displays the technical specifications for the Network Interface Controller.
Link Status	Displays the technical specifications for the Network Interface Controller.
Link Speed	Displays the technical specifications for the Network Interface Controller.
Permanent MAC Address	Displays the technical specifications for the Network Interface Controller.
Virtual MAC Address	Displays the technical specifications for the Network Interface Controller.

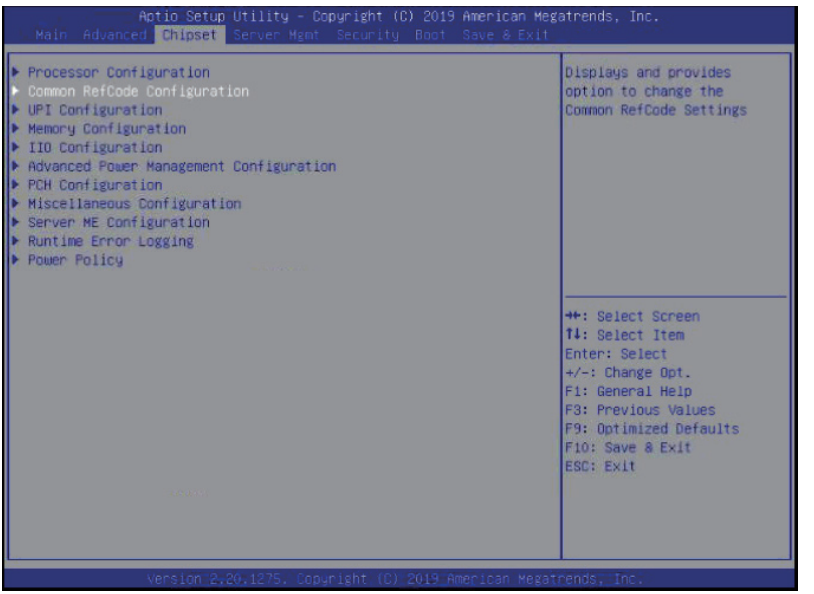
5-2-14 Driver Health



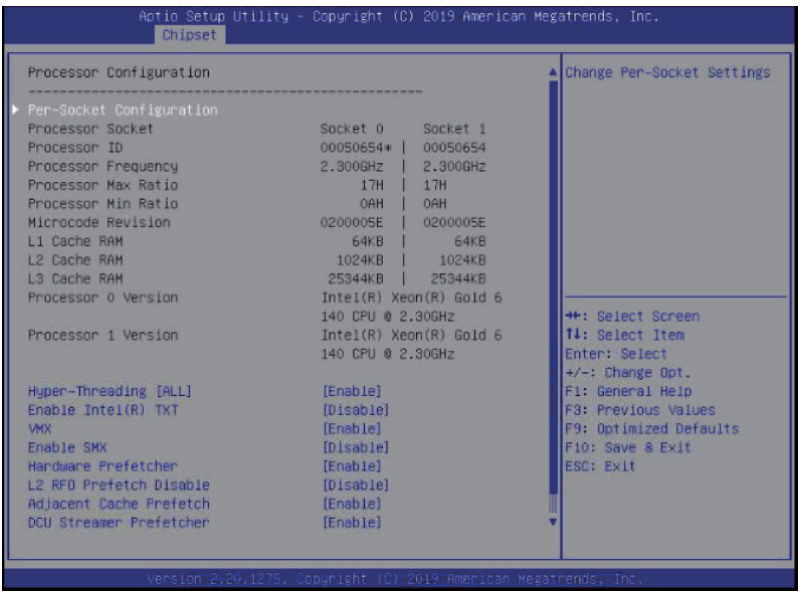
Parameter	Description
Driver Health	Press [Enter] to view the specified driver health status information.

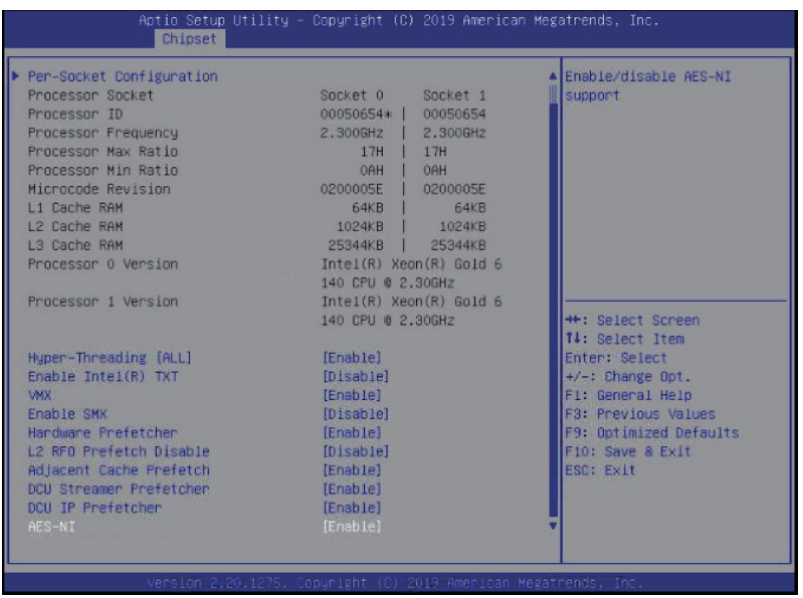
5-3 Chipset Setup Menu

Chipset Setup menu displays submenu options for configuring the function of Platform Controller Hub. Select a submenu item, then press <Enter> to access the related submenu screen.



5-3-1 Processor Configuration

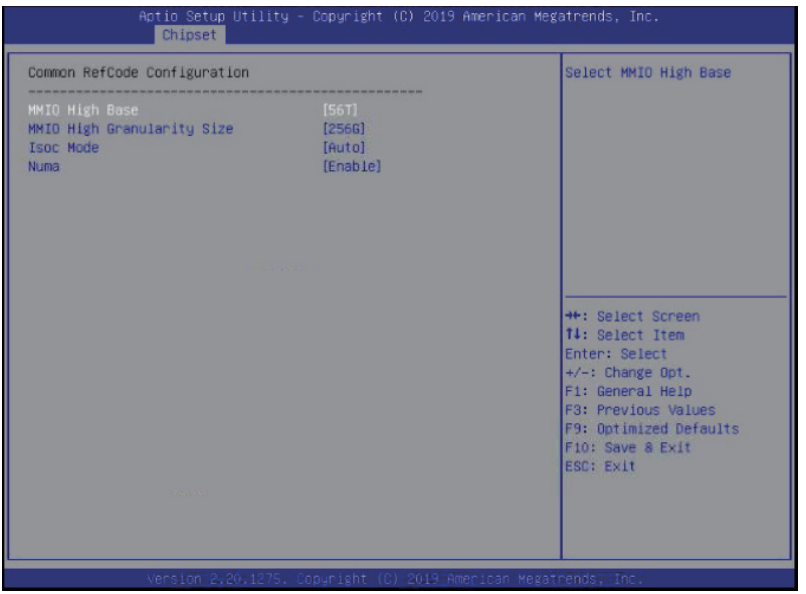




Parameter	Description
Processor Configuration	
Per-Socket Configuration	Press [Enter] to configure advanced items. ◆ CPU Socket 0/1 Configuration – Press [Enter] to configure advanced items. ◆ Core Disable Bitmap(Hex) (for CPU socket 0/1) – Number of Cores to enable. 0 means all cores. FFFFFFF means to disable all cores. The maximum value depends on the number of CPUs available. Press the numeric keys to adjust desired values.
Processor Socket / Processor ID / Processor Frequency / Processor Max Ratio / Processor Min Ratio / Microcode Revision / L1 Cache RAM / L2 Cache RAM / L3 Cache RAM / Processor 0 Version / Processor 1 Version	Displays the technical specifications for the installed processor(s).
Hyper-Threading [All]	The Hyper Threading Technology allows a single processor to execute two or more separate threads concurrently. When hyper-threading is enabled, multi-threaded software applications can execute their threads, thereby improving performance. Options available: Enable/Disable. Default setting is **Enable**.
Enable Intel(R) TXT	Enables or disables the Intel Trusted Execution Technology support function. Options available: Enable/Disable. Default setting is **Disable.**
VMX (Vanderpool Technology)	Enable/Disable the Vanderpool Technology. This will take effect after rebooting the system. Options available: Enable/Disable. Default setting is Enable.
Enable SMX	Enable/Disable the Secure Mode Extensions (SMX) support function. Options available: Enable/Disable. Default setting is **Disable**.
Hardware Prefetcher	Select whether to enable the speculative prefetch unit of the processor. Options available: Enable/Disable. Default setting is **Disable**.
L2 RF0 Prefetcher	Options available: Enable/Disable. Default setting is **Disable**.
Adjacent Cache Prefetch	When enabled, cache lines are fetched in pairs. When disabled, only the required cache line is fetched. Options available: Enable/Disable. Default setting is **Enable**.

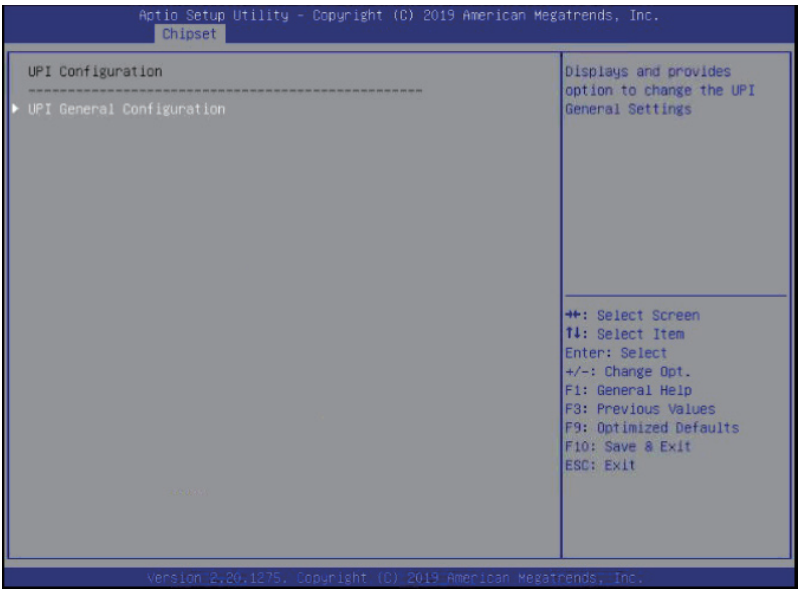
DCU Streamer Prefetcher	Prefetches the next L1 data line based upon multiple loads in same cache line. Options available: Enable/Disable. Default setting is **Enable**.
DCU IP Prefetcher	Prefetches the next L1 Data line based upon sequential load history. Options available: Enable/Disable. Default setting is **Enable**.
AES-NI	Enable/Disable the AES-NI (Intel Advanced Encryption Standard New Instructions) support function. Options available: Enable/Disable. Default setting is **Enable**.

5-3-2 Common RefCode Configuration



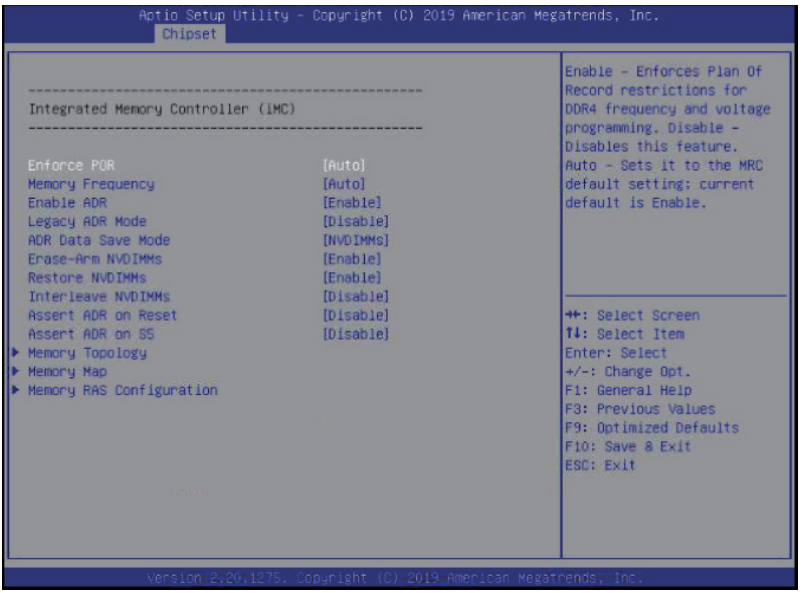
Parameter	Description
Common RefCode Configuration	
MMIO High Base	Selects the MMIO High Base setting. Options available: 56T/40T/24T/16T/4T/1T. Default setting is **56T**.
MMIO High Granularity Size	Selects the allocation size used to assign mmioh resources. Total mmioh space can be up to 32xgranularity. Per stack mmioh resource assignments are multiples of the granularity where 1 unit per stack is the default allocation. Options available: 1G/4G/16G/64G/256G/1024G. Default setting is **256G**.
Isoc Mode	Options available: Auto/Enable/Disable. Default setting is **Auto**.
Numa (Non-Uniform Memory Access)	Enable/Disable Non-uniform Memory Access (NUMA). Options available: Enable/Disable. Default setting is **Enable**.

5-3-3 UPI Configuration



Parameter	Description
UPI Configuration	
UPI General Configuration	Press [Enter] to configure advanced items. ◆ UPI Status – Press [Enter] to view the UPI status. ◆ Link Frequency Select – Selects the UPI link frequency. – Options available: 9.6GB/10.4GB/Auto. Default setting is **Auto**. ◆ SNC – Enable/Disable SNC. – Options available: Disable/Enable/Auto. Default setting is **Disable**. ◆ Stale AtoS – Enable/Disable Stale A to S Dir optimization. – Options available: Disable/Enable/Auto. Default setting is **Disable**. ◆ LLC dead line alloc – Enable/Disable LLC dead line alloc. – Options available: Disable/Enable/Auto. Default setting is **Auto**.

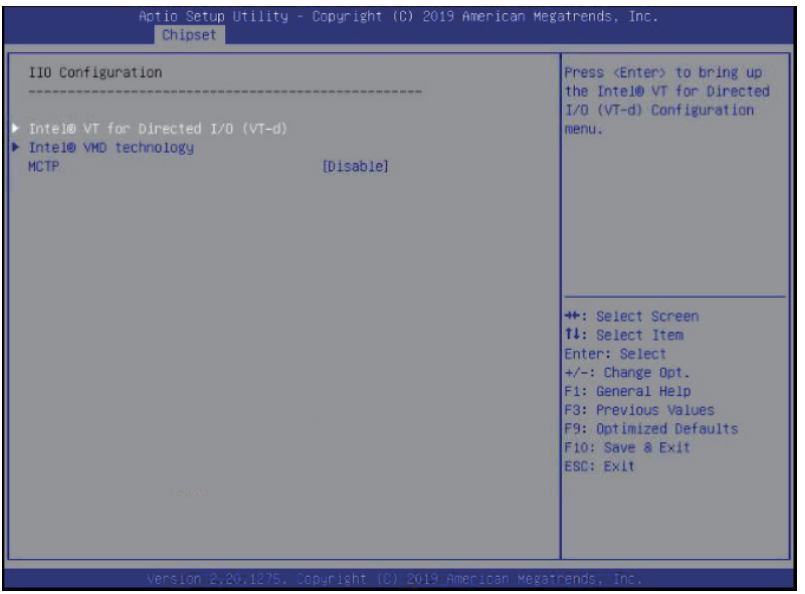
5-3-4 Memory Configuration



Parameter	Description
Integrated Memory Controller (iMC)	
Enforce POR	When set to Enable, the system enforces Plan Of Record restrictions for DDR4 frequency and voltage programming. When set to Auto, the system sets it to the MRC default settings. Options available: Auto/POR/Disable. Default setting is **Enable**.
Memory Frequency	Configures the memory frequency. Options available: Auto/2133/2400/2666. Default setting is **Auto**.
Enable ADR	Enables the detecting and enabling of ADR. Options available: Enable/Disable. Default setting is **Enable**.
Legacy ADR Mode	Enable/Disable the Legacy ADR Mode. Options available: Enable/Disable. Default setting is **Disable**.
ADR Data Save Mode	Data Save Mode for ADR, Batterybacked or Type 01 NVDIMM. Options available: Disable/Batterybacked DIMMs/NVDIMMs. Default setting is **NVDIMMs**.
Erase-ARM NVDIMMs	Enable/Disable Erasing and Arming NVDIMMs. Options available: Enable/Disable. Default setting is **Enable**.
Restore NVDIMMs	Enable/Disable Automatic restoring of NVDIMMs. Options available: Enable/Disable. Default setting is **Enable**.

Parameter	Description
Interleave NVDIMMs	Controls if NVDIMMs are interleaved together or not. Options available: Enable/Disable. Default setting is **Disable**.
Assert ADR on Reset	Enable/Disable Assert ADR on Reset. Options available: Enable/Disable. Default setting is **Disable**.
Assert ADR on S5	Enable/Disable Assert ADR on S5. Options available: Enable/Disable. Default setting is **Disable**.
Memory Topology	Press [Enter] to view memory configurations.
Memory Map	Press [Enter] to configure advanced items. ◆ IMC Interleaving – Select to configure IMC Interleaving. – Options available: Auto/1-way Interleave/2-way Interlave. Default setting is **Auto**.
Memory RAS Configuration	Press [Enter] to configure advanced items. ◆ RAS Type – Displays the RAS type. ◆ Static Virtual Lockstep Mode – Enable/Disable the Static Virtual Lockstep mode. – Options available: Disable/Enable. Default setting is **Disable**. ◆ Mirror Mode – Mirror Mode will set entire 1LM/2LM memory in system to be mirrored, consequently reducing the memory capacity by half. Enables the Mirror Mode will disable the XPT Prefetch. – Options available: Disable/Mirror Mode 1LM/Mirror Mode 2LM. Default setting is **Disable**. ◆ Memory Rank Sparing – Enable/Disable Memory Rank Sparing. – Options available: Disable/Enable. Default setting is **Disable**. ◆ Correctable Error Threshold – Correctable Error Threshold (1-32767) used for sparing, tagging, and leaky bucket. – Press the <+> / <-> keys to increase or decrease the desired values. ◆ SDDC Plus One – Enable/Disable SDDC Plus One. – Options available: Disable/Enable. Default setting is **Disable**.

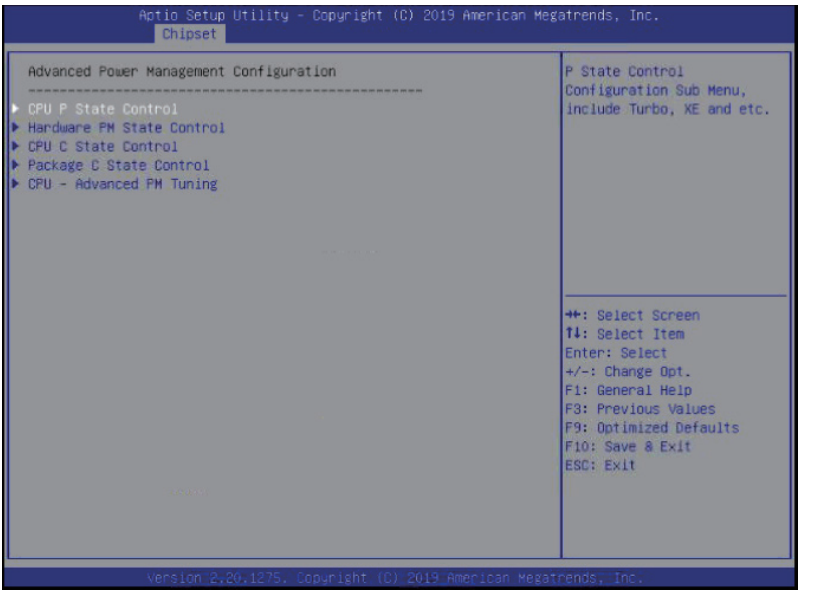
5-3-5 IIO Configuration



Parameter	Description
IIO Configuration	
Intel® VT for Directed I/O (VT-d)	Press [Enter] to configure advanced items. ◆ Intel® VT for Directed I/O (VT-d) – Enable/Disable the Intel VT for Directed I/O (VT-d) support function by reporting the I/O device assignment to VMM through DMAR ACPI Tables. – Options available: Enable/Disable. Default setting is **Enable**. ◆ ACS Control – Enable: Programs ACS only to Chipset Pcie Root Ports Bridges. – Disable: Programs ACS to all PCIe bridges. – Default setting is **Enable**. ◆ Interrupt Remapping – Enable/Disable the interrupt remapping support function. – Options available: Enable/Disable. Default setting is **Enable**. ◆ PassThrough DMA – Enable/Disable the Non-Isoch VT_D Engine PassThrough DMA support function. – Options available: Enable/Disable. Default setting is **Enable**. ◆ ATS – Enable/Disable Non-Isoch VT_D Engine ATS support. – Options available: Enable/Disable. Default setting is **Enable**.

Parameter	Description
Intel® VT for Directed I/O (VT-d) (continued)	◆ Posted Interrupt – Enable/Disable VT_D posted interrupt. – Options available: Enable/Disable. Default setting is **Enable**. ◆ Coherency Support (Non-Isoch) – Enable/Disable Non-Isoch VT_D Engine Coherency support. – Options available: Enable/Disable. Default setting is **Enable**.
Intel® VMD technology	Press [Enter] to configure advanced items. ◆ Intel® VMD technology ◆ Intel® VMD Configuration – Enable/Disable the Intel VMD support function. – Options available: Enable/Disable. Default setting is **Disable**.
MCTP	Enable/Disable MCTP (Management Component Transport Protocol). Options available: Enable/Disable. Default setting is **Disable**.

5-3-6 Advanced Power Management Configuration



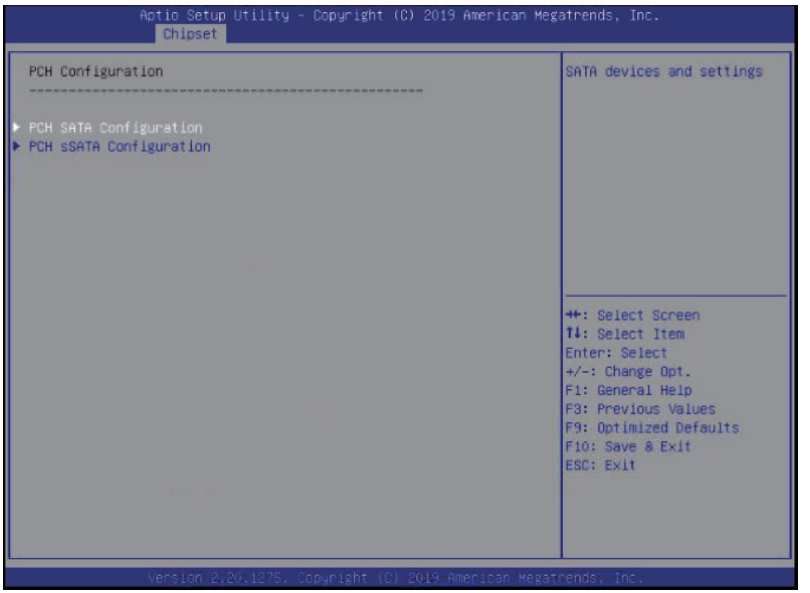
Parameter	Description
Advanced Power Management Configuration	
CPU P State Control	Press [Enter] to configure advanced items. ◆ SpeedStep (Pstates) – Conventional Intel SpeedStep Technology switches both voltage and frequency in tandem between high and low levels in response to processor load. – Options available: Enable/Disable. Default setting is **Enable**. ◆ Turbo Mode – When this item is enabled, the processor will automatically ramp up the clock speed of 1-2 of its processing cores to improve its performance. When this item is disabled, the processor will not overclock any of its core. – Options available: Enable/Disable. Default setting is **Enable**.

Parameter	Description
Hardware PM State Control	Press [Enter] to configure advanced items. ◆ Hardware P-States – When this item is disabled, the processor hardware chooses a P-state based on OS Request (Legacy P-States). – In Native mode, the processor hardware chooses a P-state based on OS guidance. – In Out of Band mode, the processor hardware autonomously chooses a P-state (with no OS guidance). – Options available: Disable/Native Mode/Out of Band Mode/ Native Mode with No Legacy Support. Default setting is **Native Mode**.
CPU C State Control	Press [Enter] to configure advanced items. ◆ Autonomous Core C-State – Enable/Disable the Autonomous Core C-State Control. – Options available: Enable/Disable. Default setting is **Disable**. ◆ CPU C6 Report – Allows you to determine whether to let the CPU enter C6 mode in system halt state. When enabled, the CPU core frequency and voltage will be reduced during system halt state to decrease power consumption. The C6 state is a more enhanced power-saving state than C1. – Options available: Disable/Enable/Auto. Default setting is **Auto**. ◆ Enhanced Halt State (C1E)(Note) – Core C1E auto promotion control. Takes effect after reboot. – Options available: Enable/Disable. Default setting is **Enable**.
Package C State Control	Configures the state for the C-State package limit. Options available: C0/C1 state/C2 state/C6 (non Retention) state/C6 (Retention) state/No Limit/Auto. Default setting is **Auto**.

Parameter	Description
CPU - Advanced PM Tuning	Press [Enter] to configure advanced items. ◆ Energy Perf BIAS – Enters the Energy Perf BIAS submenu. ◆ Power Performance Tuning(Note) – Tunes the Power Performance Configuration mode. When enabled, uses IA32_ENERGY_PERF_BIAS input from the core. When disabled, uses alternate performance BIAS input from ENERGY_PERF_BIAS_CONFIG. – Options available: OS Controls EPB/BIOS Controls EPB. Default setting is **OS Controls EPB**. ◆ Energy_PERF_BIAS_CFG mode – Selects the Energy Performance Bias Configuration Mode. – Options available: Performance/Balanced Performance/ Balanced Power/Power. Default setting is **Balanced Performance**. – Please note that this item is configurable when Power Performance Tuning is set to BIOS Controls EPB.

(Note) Advanced items prompt when this item is defined.

5-3-7 PCH Configuration



Parameter	Description
PCH Configuration	
PCH SATA Configuration	Press [Enter] to configure advanced items. ◆ SATA Controller – Enable/Disable SATA controller. – Options available: Enable/Disable. Default setting is **Enable**. ◆ Configure SATA as – Configures on chip SATA type. – AHCI Mode: When set to AHCI, the SATA controller enables its AHCI functionality. Then the RAID function is disabled and cannot be access the RAID setup utility at boot time. – RAID Mode: When set to RAID, the SATA controller enables both its RAID and AHCI functions. You will be allowed to access the RAID setup utility at boot time. – Options available: AHCI/RAID. Default setting is **AHCI**. ◆ Alternate Device ID on RAID(Note 1) – Enable/Disable Alternate Device ID on RAID mode. – Options available: Enable/Disable. Default setting is Disabled – Please note that this option appears when HDD is in **RAID Mode**. ◆ SATA Port 0/1/2/3/4/5/6/7 – The category identifies SATA hard drives that are installed in the computer. System will automatically detect HDD type.

Parameter	Description
PCH SATA Configuration (continued)	◆ Port 0/1/2/3/4/5/6/7 – Enable/Disable Port 0/1/2/3/4/5/6/7 device. – Options available: Enable/Disable. Default setting is **Enable**. ◆ Hot Plug (for Port 0/1/2/3/4/5/6/7)(Note 2) – Enable/Disable HDD Hot-Plug function. – Options available: Enable/Disable. Default setting is **Disable**. ◆ Spin Up Device (for Port 0/1/2/3/4/5/6/7)(Note 2) – On an edge detect from 0 to 1, the PCH starts a COM reset initialization to the device. – Options available: Enable/Disable. Default setting is **Disable**.
PCH sSATA Configuration	◆ sSATA Controller – Enable/Disable sSATA controller. – Options available: Enable/Disable. Default setting is **Enable**. ◆ Configure sSATA as – Configures on chip SATA type. – AHCI Mode: When set to AHCI, the SATA controller enables its AHCI functionality. Then the RAID function is disabled and cannot be access the RAID setup utility at boot time. – RAID Mode: When set to RAID, the SATA controller enables both its RAID and AHCI functions. You will be allowed to access the RAID setup utility at boot time. – Options available: AHCI/RAID. Default setting is **AHCI**. ◆ Alternate Device ID on RAID(Note 1) – Enable/Disable Alternate Device ID on RAID mode. – Options available: Enable/Disable. Default setting is **Disabled**. – **Please note that this option appears when HDD is in RAID Mode.** ◆ sSATA Port 0/1/2/3/4/5 – The category identifies sSATA hard drives that are installed in the computer. System will automatically detect HDD type. ◆ Port 0/1/2/3/4/5 – Enable/Disable Port 0/1/2/3/4/5 device. – Options available: Enable/Disable. Default setting is **Enable**. ◆ Hot Plug (for Port 0/1/2/3/4/5)(Note 2) – Enable/Disable HDD Hot-Plug function. – Options available: Enable/Disable. Default setting is **Disable**. ◆ Spin Up Device (for Port 0/1/2/3/4/5)(Note 2) – On an edge detect from 0 to 1, the PCH starts a COM reset initialization to the device. – Options available: Enable/Disable. Default setting is **Disabled**.

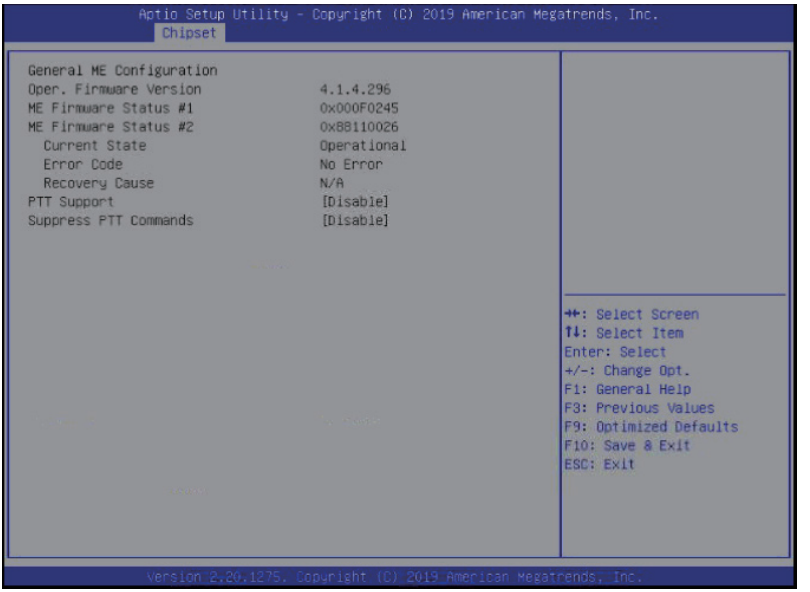
(Note 1) Only appears when HDD sets to **RAID** Mode.

(Note 2) Only Supported when HDD is in **AHCI** or **RAID** Mode.

5-3-8 Miscellaneous Configuration

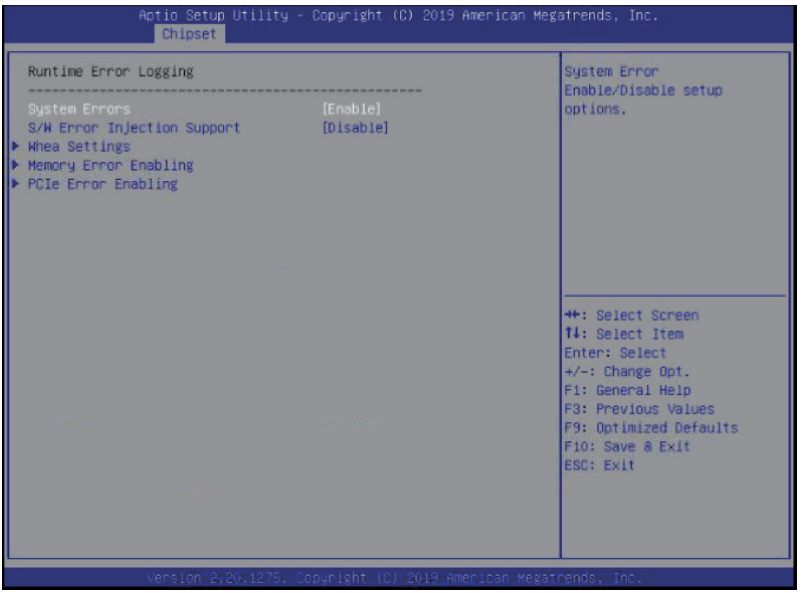
Parameter	Description
Miscellaneous Configuration	
Active Video	Selects the active video type. Options available: Auto/Onboard Device/PCIE Device. Default setting is **Auto**.

5-3-9 Server ME Configuration



Parameter	Description
General ME Configuration	
Operational Firmware Version	Selects the active video type. Options available: Auto/Onboard Device/PCIE Device. Default setting is **Auto**.
ME Firmware Status #1/#2	Displays ME Firmware status information.
Current State (for ME Firmware)	Displays ME Firmware current status information.
Error Code (for ME Firmware)	Displays ME Firmware status error code.
Recovery Cause (for ME Firmware)	Displays ME Firmware recovery cause.
PTT Support	Displays if the system supports the Intel® Platform Trust Technology.
Suppress PTT Commands	Displays if the system has suppressed Intel® Platform Trust Technology commands.

5-3-10 Runtime Error Logging



Parameter	Description
Runtime Error Logging	
System Errors	Enable/Disable system error logging function. Options available: Enable/Disable. Default setting is **Enable**.
S/W Error Injection Support	Enable/Disable software injection error logging function. Options available: Enable/Disable. Default setting is **Disable**.
Whea Settings	Press [Enter] to configure advanced items. ◆ WHEA (Windows Hardware Error Architecture) Support – Enable/Disable WHEA Support. – Options available: Enable/Disable. Default setting is **Enable**.
Memory Error Enabling	Press [Enter] to configure advanced items. ◆ Memory Error – Enable/Disable Memory Error. – Options available: Enable/Disable. Default setting is **Enable**. ◆ Memory Corrected Error – Enable/Disable Memory Corrected Error. – Options available: Enable/Disable. Default setting is **Enable**. ◆ Uncorrected Error disable Memory – Enable/Disable the Memory that triggers Uncorrected Error. – Options available: Enable/Disable. Default setting is **Disable**.

Parameter	Description
PCIe Error Enabling	Press [Enter] to configure advanced items. ◆ PCIE Error – Enables and escalates Correctable Errors to error pins. – Options available: Enable/Disable. Default setting is **Enable**. ◆ Uncorrected Error(Note) – Enables and escalates Uncorrectable/Recoverable Errors to error pins. – Options available: Enable/Disable. Default setting is **Enable**. ◆ Fatal Error Enable(Note) – Enables and escalates Fatal Errors to error pins. – Options available: Enable/Disable. Default setting is **Enable**. ◆ SERR Propagation(Note) – Enable/Disable SERR propagation. – Options available: Enable/Disable. Default setting is **Enable**. ◆ PERR Propagation(Note) – Enable/Disable PERR propagation. – Options available: Enable/Disable. Default setting is **Enable**.

(Note) Only appears when PCIE Error is set to **Enable**.

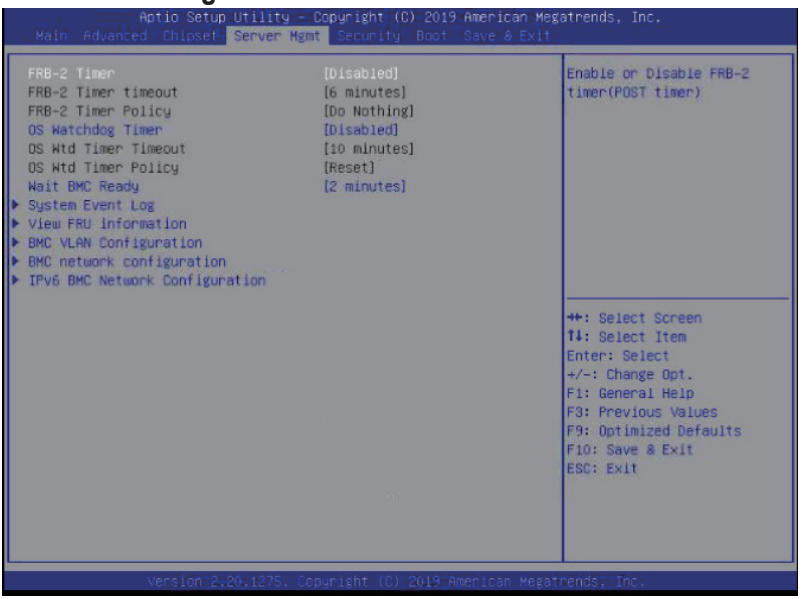
5-3-11 Power Policy

Parameter	Description
Power Policy Quick Settings	Selects a Power Policy Quick Setting. Options available: Standard/Best Performance/Energy Efficient
SpeedStep (Pstates)	Conventional Intel SpeedStep Technology switches both voltage and frequency in tandem between high and low levels in response to processor load. Options available: Enabled/Disabled. Default setting is **Enabled**.
Turbo Mode	When this item is Enabledd, the processor will automatically ramp up the clock speed of 1-2 of its processing cores to improve its performance. When this item is Disabledd, the processor will not overclock any of its core. Options available: Enabled/Disabled. Default setting is **Enabled**.
CPU C6 report	Allows you to determine whether to let the CPU enter C6 mode in system halt state. When Enabledd, the CPU core frequency and voltage will be reduced during system halt state to decrease power consumption. The C6 state is a more enhanced powersaving state than C1. Options available: Disabled/Enabled/Auto. Default setting is **Auto**.
Enhanced Halt State (C1E)(Note)	Core C1E auto promotion control. Takes effect after reboot. Options available: Enabled/Disabled. Default setting is Enabled.

(Note) Advanced items prompt when this item is defined.

Parameter	Description
Package C State	Configures the state for the C-State package limit. Options available: C0/C1 state/C2 state/C6 (non Retention) state/C6 (Retention) state/No Limit/Auto. Default setting is **Auto**.
Hyper-Threading [ALL]	The Hyper Threading Technology allows a single processor to execute two or more separate threads concurrently. When hyper-threading is enabled, multi-threaded software applications can execute their threads, thereby improving performance. Options available: Enable/Disable. Default setting is **Enable**.
Hardware Prefetcher	Select whether to enable the speculative prefetch unit of the processor. Options available: Enable/Disable. Default setting is **Disable**.
Adjacent Cache Prefetch	When enabled, cache lines are fetched in pairs. When disabled, only the required cache line is fetched. Options available: Enable/Disable. Default setting is **Enable**.
DCU Streamer Prefetcher	Prefetches the next L1 data line based upon multiple loads in same cache line. Options available: Enable/Disable. Default setting is **Enable**.
Isoc Mode	Options available: Auto/Enable/Disable. Default setting is **Auto**.
Intel® VT for Directed I/O (VT-d)	Enable/Disable the Intel VT for Directed I/O (VT-d) support function by reporting the I/O device assignment to VMM through DMAR ACPI Tables. Options available: Enable/Disable. Default setting is **Enable**.
Link Frequency Select	Selects the UPI link frequency. Options available: 9.6GB/10.4GB/Auto. Default setting is **Auto**.

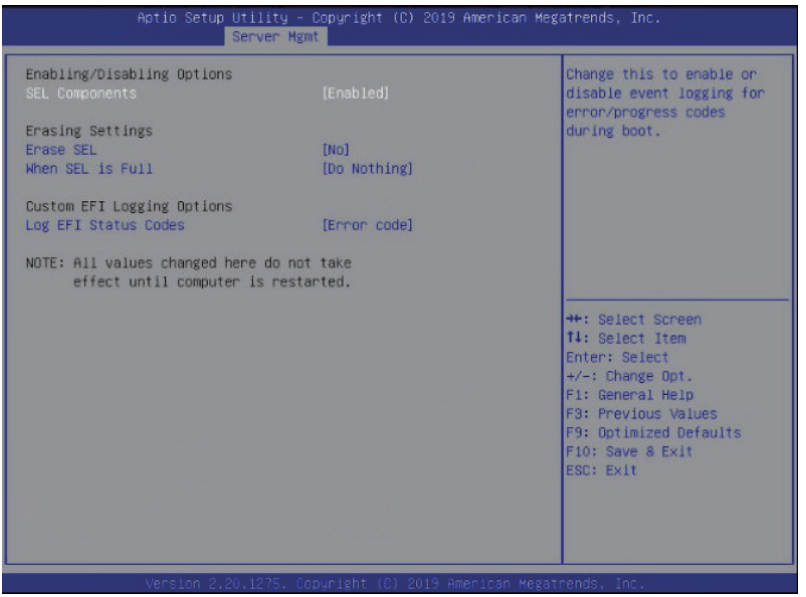
5-4 Server Management Menu



Parameter	Description
FRB-2 Timer	Enable/Disable FRB-2 timer (POST timer). Options available: Enabled/Disabled. Default setting is **Disabled**.
FRB-2 Timer timeout	Configure the FRB2 Timer timeout. Options available: 3 minutes/4 minutes/5 minutes/6 minutes. Default setting is **6 minutes**. **Please note that this item is configurable when FRB-2 Timer is set to Enabled.**
FRB-2 Timer Policy	Configure the FRB2 Timer policy. Options available: Do Nothing/Reset/Power Down. Default setting is **Do Nothing**. **Please note that this item is configurable when FRB-2 Timer is set to Enabled.**
OS Watchdog Timer	Enable/Disable OS Watchdog Timer function. Options available: Enabled/Disabled. Default setting is **Disabled**.
OS Wtd Timer Timeout	Configure OS Watchdog Timer. Options available: 5 minutes/10 minutes/15 minutes/20 minutes. Default setting is **10 minutes**. **Please note that this item is configurable when OS Watchdog Timer is set to Enabled.**
OS Wtd Timer Policy	Configure OS Watchdog Timer Policy. Options available: Reset/Do Nothing/Power Down. Default setting is **Reset**. **Please note that this item is configurable when OS Watchdog Timer is set to Enabled.**

Parameter	Description
System Event Log	Press [Enter] to configure advanced items.
View FRU Information	Press [Enter] to view the advanced items.
BMC network configuration	Press [Enter] to configure advanced items.
IPv6 BMC Network Configuration	Press [Enter] to configure advanced items.

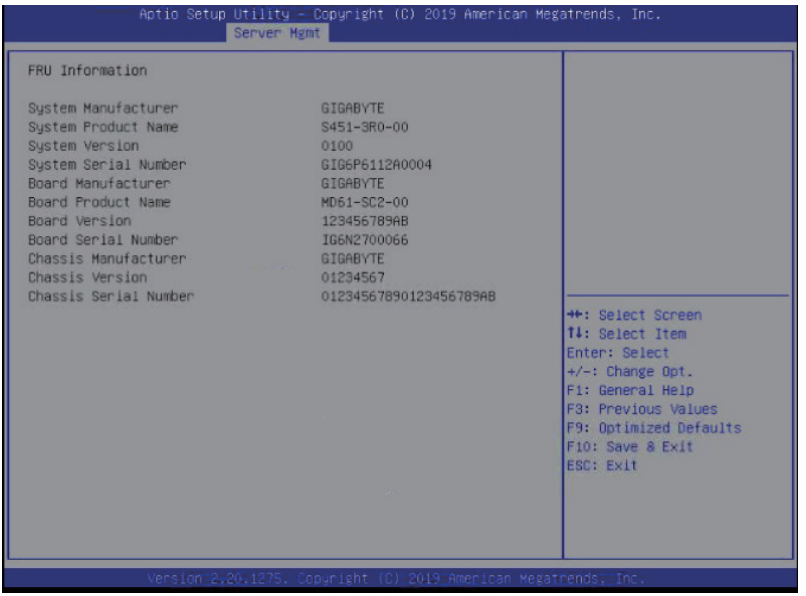
5-4-1 System Event Log



Parameter	Description
Enabling / Disabling Options	
SEL Components	Change this item to enable or disable all features of System Event Logging during boot. Options available: Enabled/Disabled. Default setting is **Enabled**.
Erasing Settings	
Erasing SEL	Choose options for erasing SEL. Options available: No/Yes, On next reset/Yes, On every reset. Default setting is **No**.
When SEL is Full	Choose options for reactions to a full SEL. Options available: Do Nothing/Erase Immediately. Default setting is **Do Nothing**.
Custom EFI Logging Options	
Log EFI Status Codes	Enable/Disable the logging of EFI Status Codes (if not already converted to legacy). Options available: Disabled/Both/Error code/Progress code. Default setting is **Error code**.

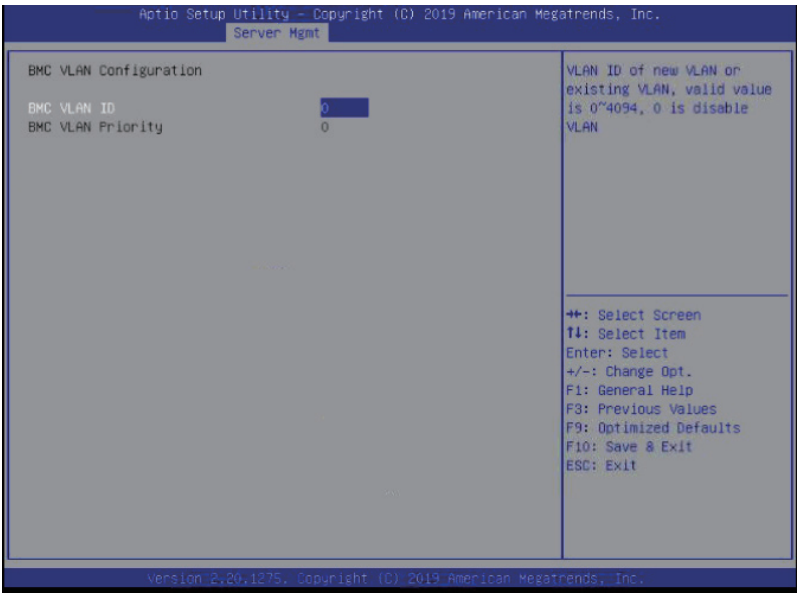
5-4-2 View FRU Information

The FRU page is a simple display page for basic system ID information, as well as System product information. Items on this window are non-configurable.



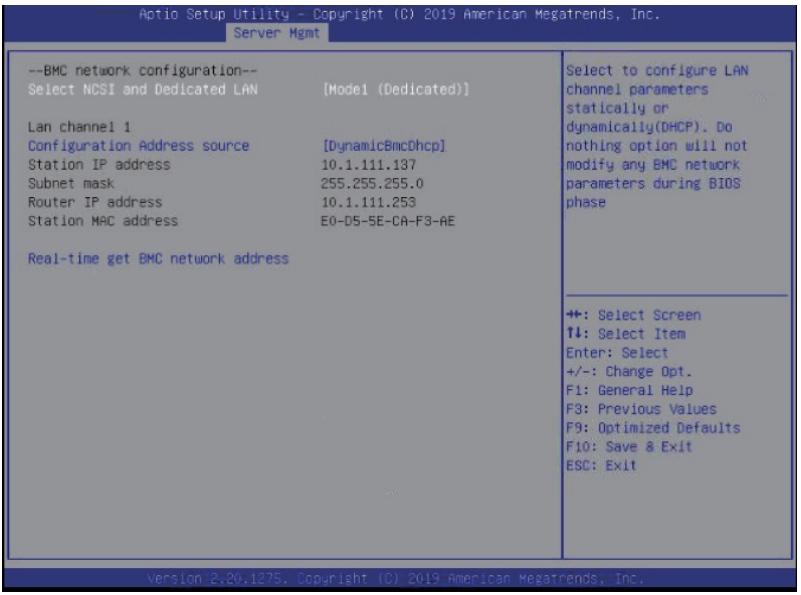
(Note) The model name will vary depends on the product you purchased.

5-4-3 BMC VLAN Configuration



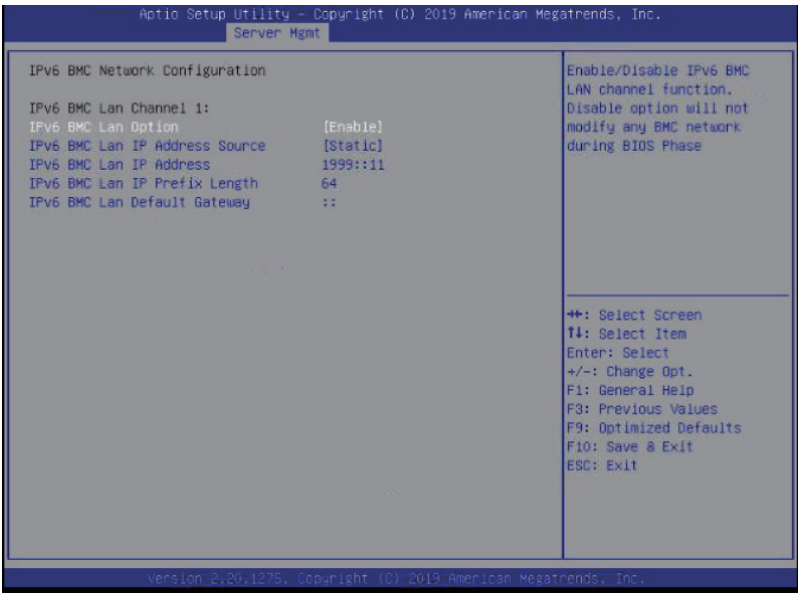
Parameter	Description
BMC VLAN Configuration	
BMC VLAN ID	Select to configure BMC VLAN ID. The valid range is from 0 to 4094. When set to 0, BMC VLAN ID will be disabled.
BMC VLAN Priority	Select to configure BMC VLAN Priority. The valid range is from 0 to 7. When BMC VLAN ID is set to 0, BMC VLAN Priority will not be selected.

5-4-4 BMC Network Configuration



Parameter	Description
BMC network configuration	
Select NCSI and Dedicated LAN	Switch NCSI and dedicated LAN and send KCS command. Options available: Do Nothing/Mode1 (Dedicated)/Mode2(NSCI)/Mode3 (Failover). Default setting is **Mode1 (Dedicated)**.
Lan Channel 1	
Configuration Address source	Select to configure LAN channel parameters statically or dynamically (DHCP). Do nothing option will not modify any BMC network parameters during BIOS phase. Options available: Unspecified/Static/DynamicBmcDhcp. Default setting is **DynamicBmcDhcp**.
Station IP address	Displays IP Address information.
Subnet mask	Displays Subnet Mask information. Please note that the IP address must be in three digitals, for example, 192.168.000.001.
Router IP address	Displays the Router IP Address information.
Station MAC address	Displays the MAC Address information.
Real-time synchronize BMC network parameter values	Press [Enter] to synchronize the BMC network parameter values.

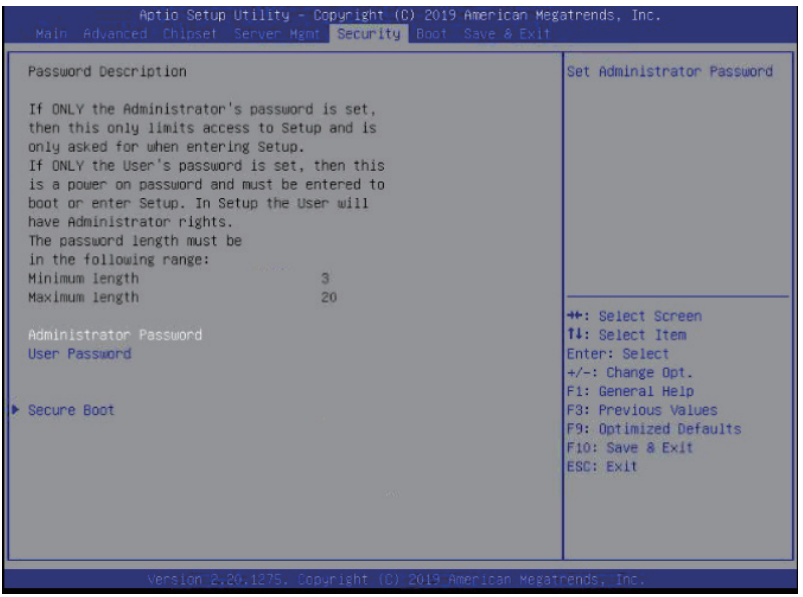
5-4-5 IPv6 BMC Network Configuration



Parameter	Description
IPv6 BMC Network Configuration	
IPv6 BMC Lan Channel 1	
IPv6 BMC Lan Option	Enable/Disable IPv6 BMC LAN channel function. When this item is disabled, the system will not modify any BMC network during BIOS phase. Options available: Enable/Disable. Default setting is **Enable**.
IPv6 BMC Lan IP Address Source	Select to configure LAN channel parameters statically or dynamically (by BIOS or BMC). Options available: Unspecified/Static/Dynamic-Obtained by BMC running DHCP. Default setting is **Dynamic-Obtained by BMC running DHCP**.
IPv6 BMC Lan IP Address/ Prefix Length	Check if the IPv6 BMC LAN IP address matches those displayed on the screen.
IPv6 BMC Lan Default Gateway	Enter the IPv6 BMC LAN default gateway.

5-5 Security Menu

The Security menu allows you to safeguard and protect the system from unauthorized use by setting up access passwords.



There are two types of passwords that you can set:

- Administrator Password

  Entering this password will allow the user to access and change all settings in the Setup Utility.

- User Password

  Entering this password will restrict a user's access to the Setup menus. To enable or disable this field, a Administrator Password must first be set. A user can only access and modify the System Time, System Date, and Set User Password fields.

Parameter	Description
Administrator Password	Press [Enter] to configure the administrator password.
User Password	Press [Enter] to configure the user password.
Secure Boot	Press [Enter] to configure advanced items.

5-5-1 Secure Boot

The Secure Boot submenu is applicable when your device is installed the Windows® 8 (or above) operating system.

Parameter	Description
System Mode	Displays the system is in User mode or Setup mode.
Secure Boot	Enables/Disables Secure Boot. The mode change requires a platform reset. Options available: Enabled/Disabled. Default setting is **Disabled**.
Secure Boot Mode(Note)	Secure Boot requires all the applications that are running during the booting process to be pre-signed with valid digital certificates. This way, the system knows all the files being loaded before Windows loads and gets to the login screen have not been tampered with. When set to Standard, it will automatically load the Secure Boot keys form the BIOS databases. When set to Custom, you can customize the Secure Boot settings and manually load its keys from the BIOS database. Options available: Standard/Custom. Default setting is Custom.
Restore Factory Keys	Forces the system to user mode and installs factury default Secure Boot key database.
Key Management	Press [Enter] to configure advanced items.

(Note) Advanced items prompt when this item is set to **Custom**.

Parameter	Description
Key Management (cont.)	**Please note that this item is configurable when Secure Boot Mode is set to Custom.** ◆ Factory Key Provision – Installs factory default Secure Boot keys after the platform resets and the system is in Setup Mode. – Options available: Enabled/Disabled. Default setting is **Disabled**. ◆ Restore Factory Keys – Installs factory default Secure Boot key databases. It will force the system in User Mode. – Options available: Yes/No. ◆ Enroll Efi Image – Press [Enter] to enroll SHA256 hash of the binary into Authorized Signature Database (db). ◆ Restore DB defaults – Press [Enter] to restore DB variable to factory defaults. – Options available: Yes/No. ◆ Secure Boot variable – Displays the current status of the variables used for secure boot. ◆ Platform Key (PK) – Displays the current status of the Platform Key (PK). – Press [Enter] to configure a new PK. – Options available: Set New. ◆ Key Exchange Keys (KEK) – Displays the current status of the Key Exchange Key Database (KEK). – Press [Enter] to configure a new KEK or load additional KEK from storage devices. – Options available: Set New/Append. ◆ Authorized Signatures (DB) – Displays the current status of the Authorized Signature Database. – Press [Enter] to configure a new DB or load additional DB from storage devices. – Options available: Set New/Append. ◆ Forbidden Signatures (DBX) – Displays the current status of the Forbidden Signature Database. – Press [Enter] to configure a new dbx or load additional dbx from storage devices. – Options available: Set New/Append. ◆ Authorized TimeStamps (DBT) – Displays the current status of the Authorized TimeStamps Database. – Press [Enter] to configure a new DBT or load additional DBT from storage devices. – Options available: Set New/Append. ◆ OsRecovery Signatures – Displays the current status of the OsRecovery Signature Database. – Press [Enter] to configure a new OsRecovery Signature or load additional OsRecovery Signature from storage devices. – Options available: Set New/Append.

5-6 Boot Menu

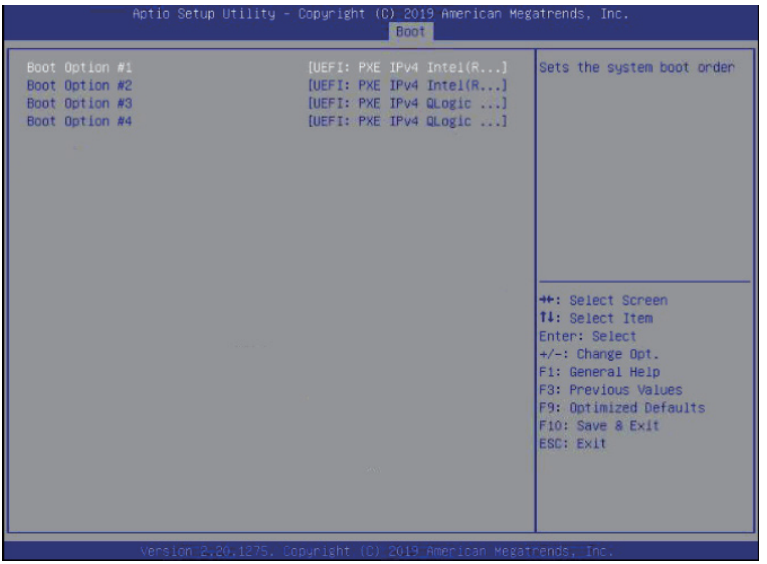
The Boot menu allows you to set the drive priority during system boot-up. BIOS setup will display an error message if the legacy drive(s) specified is not bootable.

Parameter	Description
Boot Configuration	
Setup Prompt Timeout	Number of seconds to wait for setup activation key. 65535 (0xFFFF) means indefinite waiting. Press the numeric keys to input the desired values.
Bootup NumLock State	Enable/Disable the Bootup NumLock function. Options available: On/Off. Default setting is **On**.
Quiet Boot	Enable/Disable showing the logo during POST. Options available: Enabled/Disabled. Default setting is **Enabled**.
Boot mode select	Selects the boot mode. Options available: LEGACY/UEFI. Default setting is **UEFI**.

Parameter	Description
FIXED BOOT ORDER Priorities	
Boot Option #1 / #2 / #3 / #4 / #5	Press [Enter] to configure the boot priority. By default, the server searches for boot devices in the following sequence: 1. Hard drive. 2. CD-COM/DVD drive. 3. USB device. 4. Network. 5. UEFI.
UEFI Network Drive BBS Priorities	Press [Enter] to configure the boot priority.
UEFI Application Boot Priorities	Press [Enter] to configure the boot priority.

5-6-1 UEFI NETWORK Drive BBS Priorities

The UEFI network drive BBS priorities submenu allows you to specify the boot device priority from the available UEFI network drives during system boot-up. BIOS setup will display an error message if the legacy drive(s) specified is not bootable.



5-6-2 UEFI Application Boot Priorities

The UEFI application boot priorities submenu allows you to specify the boot device priority from the available UEFI applications during system boot-up. BIOS setup will display an error message if the legacy drive(s) specified is not bootable.

5-7 Save & Exit Menu

The Save & Exit menu displays the various options to quit from the BIOS setup. Highlight any of the exit options then press <Enter>.

Parameter	Description
Save Options	
Save Changes and Exit	Saves changes made and closes the BIOS setup. Options available: Yes/No.
Discard Changes and Exit	Discards changes made and exits the BIOS setup. Options available: Yes/No.
Save Changes and Reset	Restarts the system after saving the changes made. Options available: Yes/No.
Discard Changes and Reset	Restarts the system without saving any changes. Options available: Yes/No.
Save Changes	Saves changes made in the BIOS setup. Options available: Yes/No.
Discard Changes	Discards changes made and closes the BIOS setup. Options available: Yes/No.

Parameter	Description
Default Options	
Restore Defaults	Loads the default settings for all BIOS setup parameters. Setup Defaults are quite demanding in terms of resources consumption. If you are using low-speed memory chips or other kinds of low-performance components and you choose to load these settings, the system might not function properly. Options available: Yes/No.
Save as User Defaults	Saves the changes made as the user default settings. Options available: Yes/No.
Restore User Defaults	Loads the user default settings for all BIOS setup parameters. Options available: Yes/No.
Boot Override	Press [Enter] to configure the device as the boot-up drive.

5-8-4 Intel UPI POST Codes

Initialize KTIRC inuput structure default values	0xA0
Collect info such as SBSP, Boot Mode, Reset type etc	0xA1
Setup IO SADs in SBSP to access the config space	0xA2
Setup up minimum path between SBSP & other sockets Add the node to the tree Parse the LEP of the discovered socket Check if the system has the supported topology Setup the boot path for the parent which is not directly connected to Legacy CPU Setup path from SBSP to the new found node	0xA3
Setup IO SADs in PBSP to access the config space	0xA4
System configurations that require some kind of reset	0xA5
Sync up with PBSPs	0xA6
Topology discovery and route calculation	0xA7
Program final route	0xA8
Program final IO SAD setting	0xA9
Protocol layer and other Uncore settings	0xAA
Transition links to full speed operation	0xAB
Phy layer settings	0xAC
Link layer settings	0xAD
Coherency Settings	0xAE
KTIRC is done	0xAF

5-8-5 Intel UPI Error Codes

When system BSP tries to setup path for remote sockets or sends a Boot_Go command to remote socket in SetupSbspPathToAllSockets() or SyncUpPbspForReset(). If the remote socket(s) hasn't checked-in, assert; it is a fatal condition, this error will be logged. No retry. *RC Behavior: System Halt*	0xD8
When SBSP tries to add this remote socket into system topology tree in SetupSbspPathToAllSockets(), there are some errors occur in the data structure. No retry. *RC Behavior: The current Socket is not added to the tree.* When SBSP setups the boot path for the parent which is not directly connected to Legacy CPU in SetupSbspPathToAllSockets(). The Child is not an immediate neighbor of Parent. No retry.	0xDA

SAD setup error *RC Behavior: System Halt*	0xDB
Unsupported topology *RC Behavior: System Halt*	0xDC
SBSP cannot find KPIRC TXEQ Parameters for this link in GetSocketLinkEparams(). No retry. *RC Behavior: System Halt*	0xDD

5-8-6 Intel MRC POST Codes

Detect DIMM population	0xB0
Set DDR frequency	0xB1
Gather remaining SPD data	0xB2
Program registers on the memory controller level	0xB3
Evaluate RAS modes and save rank information	0xB4
Program registers on the channel level	0xB5
DDRIO Initialization	0xB6
Train DDR	0xB7
Initialize CLTT/OLTT	0xB8
Hardware memory test and init	0xB9
Execute memory init	0xBA
Program memory map and interleaving	0xBB
Program RAS configuration	0xBC
Rank margin tool	0xBD
MRC is done	0xBF

5-8-7 Intel MRC Error Codes

No memory was detected	0xE8
Memory test failure	0xEB
Different dimm types are detected installed in the system	0xED
Number of HAs found in system greater than MAX_HA defined in MRC build	0xEE
Indicates a CLTT table structure error	0xEF
Invalid VR mode, unable to set DRAM VDD	0xF0
Failure occurred reserving memory for IOT	0xF1
Reference code assert	0xF2
Unsupported MC frequency set	0xF3
Unable to get current MC frequency	0xF4

5-8-8 Intel PM POST Codes

Start of PPM structure initialization	0xD0
PPM CSR programming	0xD1
PPM MSR programming	0xD2
Start of PState transition init	0xD3
PPM exit	0xD4
PPM On ready to boot event	0xD5

5-8-9 Intel PM POST Codes

Start of IIO early Initialization	0xE0
Pre Link training	0xE1
Start of Gen3 EQ training	0xE2
Start of PState transition init	0xE3
Gen3 parameters override	0xE4
End of IIO Early Initialization	0xE5
Start of IIO Late initialization	0xE6
PCIE port initialization	0xE7
IOAPIC initialization	0xE8
VTD initialization	0xE9
IOAT initialization	0xEA
DFX initialization	0xEB
NTB initialization	0xEC
Security Initialization	0xED
IIO late initialization	0xEE
IIO On ready to boot event	0xEF

5-9 BIOS Recovery Instruction

The system has an embedded recovery technique. In the event that the BIOS becomes corrupt the boot block can be used to restore the BIOS to a working state. To restore your BIOS, please visit the Gigabyte website: https://www.gigabyte.com and search for the specific product and find the document: **Easy BIOS Refresh User's Guide** from **Manual**.
