MW70-3S0 Motherboard Layout

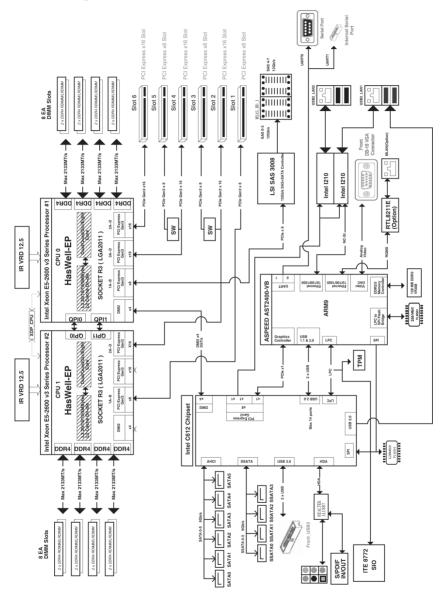

Item	Code	Description
1	CPU1_FAN	CPU1 fan connector (for Secondary CPU)
2	HD_AUDIO	Audio connectors
3	USB3_LAN1	LAN port (top) / USB 3.0 ports (bottom)
4	USB2_LAN2	LAN port (top) / USB 2.0 ports (bottom)
5	COM1	Serial port
6	P12V_AUX2	8 pin power connector (for secondary CPU)
7	DIMM_P1_G0	Channel 3 slot 0 (for secondary CPU)
8	DIMM_P1_G1	Channel 3 slot 1 (for secondary CPU)
9	DIMM_P1_H0	Channel 4 slot 0 (for secondary CPU)
10	DIMM_P1_H1	Channel 4 slot 1 (for secondary CPU)
11	CPU1	Intel LGA2011 Socket R (Secondary CPU)
12	PMBUS	PMBus connector
13	ATX1	24 pin main power connector
14	DIMM_P0_A0	Channel 1 slot 0 (for primary CPU)
15	DIMM_P0_A1	Channel 1 slot 1 (for primary CPU)
16	DIMM_P0_B0	Channel 2 slot 0 (for primary CPU)
17	DIMM_P0_B1	Channel 2 slot 1 (for primary CPU)
18	P12V_AUX1	8 pin power connector (for primary CPU)
19	CPU0	Intel LGA2011 Socket R (Primary CPU)
20	SYS_FAN5	System fan connector#5
21	CPU0_FAN	CPU0 fan connector (for Primary CPU)
22	DIMM_P0_D1	Channel 4 slot 1 (for primary CPU)
23	DIMM_P0_D0	Channel 4 slot 0 (for primary CPU)
24	DIMM_P0_C1	Channel 3 slot 1 (for primary CPU)
25	DIMM_P0_C0	Channel 3 slot 0 (for primary CPU)
26	ME_UPDATE	ME update jumper
27	BMC_FRB	Force to Stop FRB Timer jumper
28	ME_RCVR	ME recovry jumper
29	BIOS_PWD	Clearing Supervisor Password jumper
30	BIOS_RCVR	BIOS recovery jumper
31	LSI_UART1	LSI UART header
32	SW_RAID	Intel Software RAID Key jumper
33	SYS_FAN4	System fan connector#4
34	SYS_FAN3	System fan connector#3
35	MSAS_HD_1	Mini-SAS HD connector
36	SATA_SGP	SATA SGPIO header
37	IMR_KEY	LSI RAID key header
38	SSATA_SGP	sSATA SGPIO header
39	FP_1	Front panel header
40	SYS_FAN1	System fan connector#1
41	BP_1	HDD back plane board header
42	SYS_FAN2	System fan connector#2
43	SATAO	SATA 3 6Gb/s connector

44	SATA_DOM0	SATA port 0 DOM support jumper
45	CASE_OPEN	Case open intrusion alert header
46	LED5	LSI firmware readiness LED
47	SATA1	SATA 3 6Gb/s connector
48	SATA_DOM1	SATA port 1 DOM support jumper
49	SATA2/3/4/5	SATA 3 6Gb/s connectors
50	SSATA0/1/2/3	SATA 3 6Gb/s connectors
51	CLR_CMOS	Clear CMOS jumper
52	F_USB3	USB 3.0 header
53	IPMB	IPMB connector
54	F_USB2	USB 2.0 header
55	TPM	TPM module connector
56	COM2	Serial port cable header
57	SPDIF_OUT1	S/PDIF out header
58	SPDIF_IN1	S/PDIF in header
59	F_AUDIO	Front audio connector
60	PCIE_1	PCI Express x8 slot
61	S3_MASK	S3 Power On Select jumper
62	PCIE_2	PCI Express x16 slot
63	LAN1_LED	LAN #1 Active/Link connector
64	LAN2_LED	LAN #2 Active/Link connector
65	PCIE_3	PCI Express x8 slot
66	PCIE_4	PCI Express x16 slot
67	PCIE_5	PCI Express x8 slot
68	PCIE_6	PCI Express x16 slot
69	DIMM_P1_F1	Channel 3 slot 1 (for secondary CPU)
70	DIMM_P1_F0	Channel 3 slot 0 (for secondary CPU)
71	DIMM_P1_E1	Channel 4 slot 1 (for secondary CPU)
72	DIMM_P1_E0	Channel 4 slot 0 (for secondary CPU)
73	LED_BMC	BMC firmware readiness LED
74	BAT	Battery socket
75	BUZZER1	Buzzer

CAUTION! If a SATA type hard drive is connected to the motherboard, please ensure the jumper is closed and set to **2-3 pins** (Default setting), in order to reduce any risk of hard disk damage. Please refer to Page 39 for SATA_DOM0 and SATA_DOM1 jumper setting instruction.

Block Diagram

Chapter 1 Hardware Installation

1-1 Installation Precautions

The motherboard contains numerous delicate electronic circuits and components which can become damaged as a result of electrostatic discharge (ESD). Prior to installation, carefully read the user's manual and follow these procedures:

- Prior to installation, do not remove or break motherboard S/N (Serial Number) sticker or warranty sticker provided by your dealer. These stickers are required for warranty validation.
- Always remove the AC power by unplugging the power cord from the power outlet before installing or removing the motherboard or other hardware components.
- When connecting hardware components to the internal connectors on the motherboard, make sure they are connected tightly and securely.
- When handling the motherboard, avoid touching any metal leads or connectors.
- It is best to wear an electrostatic discharge (ESD) wrist strap when handling electronic components such as a motherboard, CPU or memory. If you do not have an ESD wrist strap, keep your hands dry and first touch a metal object to eliminate static electricity.
- Prior to installing the motherboard, please have it on top of an antistatic pad or within an electrostatic shielding container.
- Before unplugging the power supply cable from the motherboard, make sure the power supply has been turned off.
- Before turning on the power, make sure the power supply voltage has been set according to the local voltage standard.
- Before using the product, please verify that all cables and power connectors of your hardware components are connected.
- To prevent damage to the motherboard, do not allow screws to come in contact with the motherboard circuit or its components.
- Make sure there are no leftover screws or metal components placed on the motherboard or within the computer casing.
- Do not place the computer system on an uneven surface.
- Do not place the computer system in a high-temperature environment.
- Turning on the computer power during the installation process can lead to damage to system components as well as physical harm to the user.
- If you are uncertain about any installation steps or have a problem related to the use of the product, please consult a certified computer technician.

1-2 Product Specifications

CPU	 Support for Intel® Xeon® E5-2600 V3/V4 series processors in the LGA2011 package L3 cache varies with CPU Supports Dual QuickPath Interconnect up to 9.6GT/s Enhanced Intel® SpeedStep Technology (EIST) Support Intel® Virtualization Technology (VT)
Chipset	Intel® C612 Express (Wellsburg) Chipset
Memory	 16 x DIMM slots DDR4 memory supported only Quad channel memory architecture ECC RDIMM / LRDIMM modules supported Single and dual rank RDIMM modules up to 32GB supported 3DS LRDIMM modules up to 128GB supported 1.2V modules: 1600/1866/2133/2400 MHz
	 2 x Intel® I210 supports supports dual GbE LAN ports
Expansion Slots	 1 x PCI Express x16 slot, running at x16 (Gen3/PCIE_6) 1 x PCI Express x16 slot, running at x16 (Gen3/PCIE_4/The slot shares bandwidth with the PCIE_5 slot. When PCIE_5 slot is populated, the PCIE_4 will operate at x8 mode.) 1 x PCI Express x16 slot, running at x16 (Gen3/PCIE_2/The slot shares bandwidth with the PCIE_3 slot. When PCIE_3 slot is populated, the PCIE_2 will operate at x8 mode.) 3 x PCI Express x8 slots (GEN3/PCIE_1/PCIE_3/PCIE_5)
Audio	 Realtek ALC887 codec High Definition Audio 7.1 Channel
Onboard Graphics	ASPEED® AST2400 supports 128MB DDR3 VRAM
Storage Interface	 10 x SATA3 6Gb/s connectors 2 x Mini-SAS HD connectors Support for Intel® RSTe 4.0 with RAID 0, 1, 10, 5 LSI® 3008 controller supports LSI RAID 0, 1, 1E, 10
USB	 Up to 4 USB 3.0 ports (2 on the back panel, 2 additional ports via the USB brackets connected to the internal USB headers) Up to 4 USB 2.0 ports (2 on the back panel, 2 additional ports via the USB brackets connected to the internal USB headers)

Internal	1 x 24-pin ATX main power connector
Connectors	2 x 8-pin ATX 12V power connector
	2 x Mini-SAS HD connectors
	 10 x SATA3 6Gb/s connectors
	1 x PMBus header
	2 x CPU fan headers
	5 x System fan headers
	1 x Front panel header
	1 x HDD Back plane board header
	• 1 x USB 3.0 header
	1 x USB 2.0 header
	1 x TPM module connector
	1 x Serial port connector
	1 x SATA SPGIO header
	1 x sSATA SPGIO header
	1 x IPMB connector
	1 x Software RAID key connector
	1 x LSI RAID key connector
	1 x S/PDIF in header
	 1 x S/PDIF out header
	2 x LAN LED connectors
	 1 x Chassis intrusion alert header
Rear Panel I/O	2 x USB 3.0 ports
	2 x USB 2.0 ports
	• 2 x RJ-45 ports
	 1 x COM port
	• 5 x Audio connectors (Center/Subwoofer Speaker Out, Rear Speaker Out, Line
	In/Mic In, Line Out, Headphone)
	 1 x Optical SPDIF Out
I/O Controller	ASPEED® AST2400-VB chip
Hardware	System voltage detection
Monitor	CPU/System temperature detection
	CPU/System fan speed detection
	CPU/System fan speed control
	* Whether the CPU/system fan speed control function is supported will depend on the CPU/system cooler you install.
BIOS	1 x 128 Mbit flash
	AMI BIOS
Form Factor	EATX Form Factor; 13 inch x 12 inch

1-3 Installing the CPU and CPU Cooler

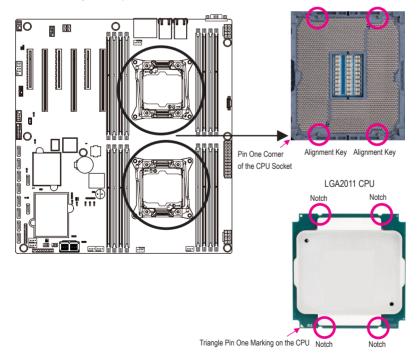

Read the following guidelines before you begin to install the CPU:

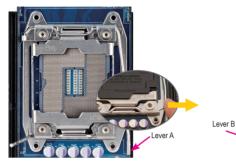

- Make sure that the motherboard supports the CPU.
- Always turn off the computer and unplug the power cord from the power outlet before installing the CPU to prevent hardware damage.
- Locate the pin one of the CPU. The CPU cannot be inserted if oriented incorrectly. (Or you may locate the notches on both sides of the CPU and alignment keys on the CPU socket.)
- Apply an even and thin layer of thermal grease on the surface of the CPU.
- Do not turn on the computer if the CPU cooler is not installed, otherwise overheating and damage of the CPU may occur.
- Set the CPU host frequency in accordance with the CPU specifications. It is not recommended
 that the system bus frequency be set beyond hardware specifications since it does not meet the
 standard requirements for the peripherals. If you wish to set the frequency beyond the standard
 specifications, please do so according to your hardware specifications including the CPU,
 graphics card, memory, hard drive, etc.

1-3-1 Installing the CPU

A. Locate the alignment keys on the motherboard CPU socket and the notches on the CPU.

- B. Follow the steps below to correctly install the CPU into the motherboard CPU socket.
 - Before installing the CPU, make sure to turn off the computer and unplug the power cord from the power outlet to prevent damage to the CPU.
 - To protect the socket contacts, do not remove the protective plastic cover unless the CPU is
 inserted into the CPU socket. Save the cover properly and replace it if the CPU is removed.

Step 1:

Push the lever closest to the "unlock" marking "
(below referred as lever A) down and away from the socket to release it.

Step 3:

Gently press lever A to allow the load plate to rise. Open the load plate. (Note: DO NOT touch the socket contacts after the load plate is opened.)

Step 2:

Push the lever closest to the "lock" marking " \triangle " (below referred as lever B) down and away from the socket. Then lift the lever.

Step 4:

Hold the CPU with your thumb and index fingers. Align the CPU pin one marking (triangle) with the pin one corner of the CPU socket (or align the CPU notches with the socket alignment keys) and carefully insert the CPU into the socket vertically. Lever B

Step 5:

Once the CPU is properly inserted, carefully replace the Finally, secure lever A under its retention tab to load plate. Then secure lever B under its retention tab. complete the installation of the CPU. The protective plastic cover may pop off from the load plate during the process of engaging the lever. Remove the cover. Save the cover properly and always replace it when the CPU is not installed.

Step 6:

1-3-2 Installing the CPU Cooler

Refer to the steps below to correctly install the CPU cooler on the motherboard. (Actual installation process may differ depending the CPU cooler to be used. Refer to the user's manual for your CPU cooler.)

Step 1:

Apply an even and thin layer of thermal grease on the surface of the installed CPU.

Step 2:

Place the cooler atop the CPU, aligning the four mounting screws with the mounting holes on the ILM. (If your cooler has a fan grill which may cause interference when you tighten the screws, remove it first and replace it after tightening the screws.)

Step 3:

Use one hand to hold the cooler and the other to tighten the screws in a diagonal sequence with a screw driver. Begin tightening a screw with a few turns and repeat with the screw diagonally opposite the one you just tightened. Then do the same to the other pair. Next, fully tighten the four screws.

Finally, attach the power connector of the CPU cooler to the CPU fan header (CPU_FAN) on the motherboard.

Please pay more attention when removing the CPU cooler because the thermal grease/tape between the CPU cooler and CPU may adhere to the CPU. Inadequately removing the CPU cooler may damage the CPU.

1-4 Installing the Memory

Read the following guidelines before you begin to install the memory:

- Make sure that the motherboard supports the memory. It is recommended that memory of the same capacity, brand, speed, and chips be used.
- Always turn off the computer and unplug the power cord from the power outlet before installing the memory to prevent hardware damage.
- Memory modules have a foolproof design. A memory module can be installed in only one direction. If you are unable to insert the memory, switch the direction.

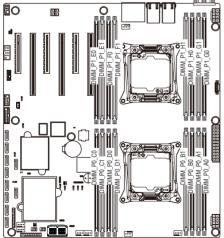

1-4-1 Four Channel Memory Configuration

This motherboard provides sixteen DDR4 memory sockets and supports Four Channel Technology. After the memory is installed, the BIOS will automatically detect the specifications and capacity of the memory. Enabling Four Channel memory mode will be four times of the original memory bandwidth.

The four DDR4 memory sockets are divided into four channels each channel has two memory sockets as following:

Channel 1: DIMM_P0_A0/DIMM_P0_A1 (For pimary CPU)/ DIMM_P1_E0/DIMM_P1_E1 (For secondary CPU) Channel 2: DIMM_P0_B0/DIMM_P0_B1 (For pimary CPU) DIMM_P1_F0/DIMM_P1_F1 (For secondary CPU) Channel 3: DIMM_P0_C0/DIMM_P0_C1 (For pimary CPU) DIMM_P1_G0/DIMM_P1_G1 (For secondary CPU) Channel 4: DIMM_P0_D0/DIMM_P0_D1 (For pimary CPU) DIMM_P1_H0/DIMM_P1_H1 (For secondary CPU) When only one DIMM is used, it must be populated in memory slot0 first. Memory populated sequence must be followed with slot0/slot1

System will not boot normally with incorrect populated sequence.

Due to CPU limitations, read the following guidelines before installing the memory in Four Channel mode.

- 1. Four Channel mode cannot be enabled if only one DDR4 memory module is installed.
- 2. When enabling Four Channel mode with two or four memory modules, it is recommended that memory of the same capacity, brand, speed, and chips be used for optimum performance.

1-4-2 Installing a Memory

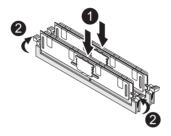

Before installing a memory module, make sure to turn off the computer and unplug the power oct from the power outlet to prevent damage to the memory module.

Be sure to install DDR4 DIMMs on this motherboard.

Installation Step:

- Step 1. Insert the DIMM memory module vertically into the DIMM slot, and push it down.
- Step 2. Close the plastic clip at both edges of the DIMM slots to lock the DIMM module.
- Note: For dual-channel operation, DIMMs must be installed in matched pairs.
- Step 3. Reverse the installation steps when you wish to remove the DIMM module.

1-4-3 DIMM Population Table

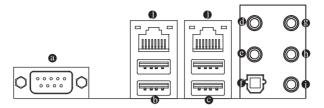

Two Slots Channel RDIMM Population Configuration Within a Channel

Туре	Ranks Per DIMM and	Speed (MT/s); Slot Per Channel (SPC) and DIMM Per Channel (DPC)		
	Data Width	1 Slot Per Channel	2 Slot Pe	er Channel
		1DPC	1DPC	2DPC
RDIMM	SRx4	2133	2133	1866
RDIMM	SRx8	2133	2133	1866
RDIMM	DRx8	2133	2133	1866
RDIMM	DRx4	2133	2133	1866
LRDIMM	QRx4	2133	2133	2133
LRDIMM 3DS	8Rx4	2400	2400	2400

DDR4 2400MHz is only available on Intel Xeon® E5-2600 V4 processor.

1-5 Back Panel Connectors

Serial Port

Connects to serial-based mouse or data processing devices.

USB 2.0 Port

The USB port supports the USB 2.0 specification. Use this port for USB devices such as a USB keyboard/mouse, USB printer, USB flash drive and etc.

USB 3.0 Port

The USB port supports the USB 3.0 specification. Use this port for USB devices such as a USB keyboard/mouse, USB printer, USB flash drive and etc.

Center/Subwoofer Speaker Out Jack (Orange)

Use this audio jack to connect center/subwoofer speakers in a 5.1/7.1-channel audio configuration.

Rear Speaker Out Jack (Black)

Use this audio jack to connect rear speakers in a 7.1-channel audio configuration.

Optical S/PDIF Out Connector

This connector provides digital audio out to an external audio system that supports digital optical audio. Before using this feature, ensure that your audio system provides an optical digital audio in connector.

Line In Jack (Blue)

The default line in jack. Use this audio jack for line in devices such as an optical drive, walkman, etc.

Line Out Jack (Green)

The default line out jack. Use this audio jack for a headphone or 2-channel speaker. This jack can be used to connect front speakers in a 4/5.1/7.1-channel audio configuration.

• Mic In Jack (Pink)

The default Mic in jack. Microphones must be connected to this jack.

RJ-45 LAN Ports (Gigabit Ethernet LAN Ports)

The Gigabit Ethernet LAN port provides Internet connection at up to 1 Gbps data rate. The following describes the states of the LAN port LEDs.

		Link	
Speed	LED	Activ	ity LED
	фr	᠆ᢣᢩᡄᡃ	
10	/100/10	000 LAN	Port

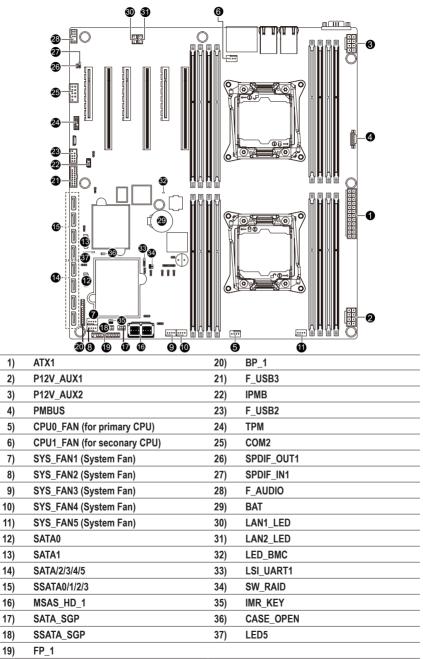

Speed LED:		Link/Activ	ity LED:
State	Description	State	Description
Yellow On	1 Gbps data rate	On	Link between system and network or no
Yellow Blink	Identify 1 Gbps data		access
	rate	Blinking	Data transmission or receiving is occurring
Green On	100 Mbps data rate	Off	No data transmission or receiving is occurring
Green Blink	Identify 100 Mbps data		
	rate		
Off	10 Mbps data rate		

• When removing the cable connected to a back panel connector, first remove the cable from your device and then remove it from the motherboard.

• When removing the cable, pull it straight out from the connector. Do not rock it side to side to prevent an electrical short inside the cable connector.

1-6 Internal Connectors

Hardware Installation

Read the following guidelines before connecting external devices:

- First make sure your devices are compliant with the connectors you wish to connect.
- Before installing the devices, be sure to turn off the devices and your computer. Unplug the power cord from the power outlet to prevent damage to the devices.
- After installing the device and before turning on the computer, make sure the device cable has been securely attached to the connector on the motherboard.

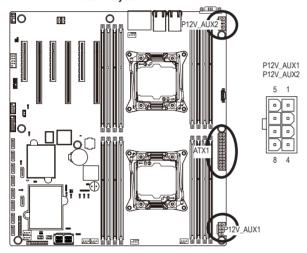

1/2/3) ATX1/P12V_AUX1/P12V_AUX2

(2x4 12V Power Connector and 2x12 Main Power Connector)

With the use of the power connector, the power supply can supply enough stable power to all the components on the motherboard. Before connecting the power connector, first make sure the power supply is turned off and all devices are properly installed. The power connector possesses a foolproof design. Connect the power supply cable to the power connector in the correct orientation. The 12V power connector mainly supplies power to the CPU. If the 12V power connector is not connected, the computer will not start.

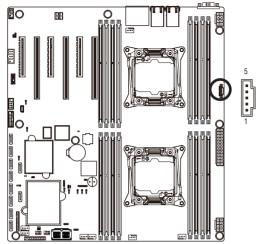

To meet expansion requirements, it is recommended that a power supply that can withstand high power consumption be used (500W or greater). If a power supply is used that does not provide the required power, the result can lead to an unstable or unbootable system.

5/6/7/8/9/10/11) CPU_FAN0/CPU_FAN1/SYS_FAN1/SYS_FAN2/SYS_FAN3/SYS_FAN4/ SYS_FAN5 (CPU Fan/System Fan Headers)

The motherboard has two 4-pin CPU fan headers, and four 4-pin system fan headers. Most fan headers possess a foolproof insertion design. When connecting a fan cable, be sure to connect it in the correct orientation (the black connector wire is the ground wire). The motherboard supports CPU fan speed control, which requires the use of a CPU fan with fan speed control design. For optimum heat dissipation, it is recommended that a system fan be installed inside the chassis.

4	Speed Control

- Be sure to connect fan cables to the fan headers to prevent your CPU and system from overheating. Overheating may result in damage to the CPU or the system may hang.
 These fan headers are not configuration immer blacks. Do not place a immer cap as the headers.
 - These fan headers are not configuration jumper blocks. Do not place a jumper cap on the headers.

12/13) SATA0/SATA1 (SATA 6Gb/s Connectors/SATA4/5 Support SATA DOM Function)

The SATA connectors conform to SATA 6Gb/s standard and are compatible with SATA 3Gb/s and 1.5Gb/s standard. Each SATA connector supports a single SATA device. Please see page 35 for SATA DOM jumper setting.

- A RAID 0 or RAID 1 configuration requires at least two hard drives. If more than two hard drives are configured, the total number of hard drives must be an even number.
 A RAID 10 configuration requires four hard drives.
- (Note) When a RAID configuration is built across the SATA 6Gb/s channels, the system performance of the RAID configuration may vary depends on the devices are connected.

16) MSAS_HD_1 (Mini-SAS HD connectors)

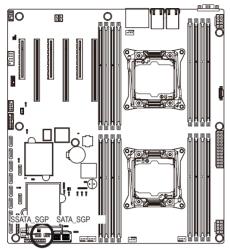

Mini-SAS HD(High Density SFF-8644) is the next-generation SAS high-density and high-speed IO interface. Mini-SAS HD is in the SAS 3.0 standard, meets the 12Gb/s SAS specification.

17/18) SATA_SGP/SSATA_SGP (SAS SGPIO Headers)

SGPIO stands for Serial General Purpose Input/Output which is a 4-signal (or 4-wire) bus used between a Host Bus Adapter (HBA) and a backplane. Out of the 4 signals, 3 are driven by the HBA and 1 is driven by the backplane. Typically, the HBA is a storage controller located inside a server, desktop, rack or workstation computer that interfaces with Hard disk drives (HDDs) to store and retrieve data.

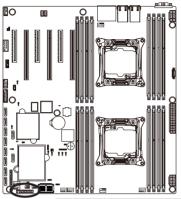

Pin No.	Definition
1	DATAIN
2	No Pin
3	DATAOUT
4	GND
5	GND
6	LOAD
7	NC
8	CLOCK

19) FP_1 (Front Panel Header)

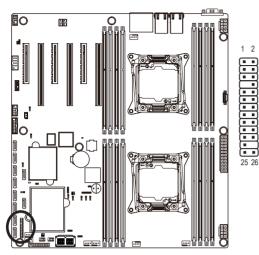

Connect the power switch, reset switch, chassis intrusion switch/sensor and system status indicator on the chassis to this header according to the pin assignments below. Note the positive and negative pins before connecting the cables.

Pin No.	Signal Name	Definition
1	PWLED+	Power LED Signal anode (+)
2	5VSB	5V Stanndby Power
3	NC	No Pin
4	ID_LED+	ID LED Signal anode (+)
5	PWLED-	Power LED Signal cathode(-)
6	ID_LED-	ID LED Signal cathode(-)
7	HD+	Hard Disk LED Signal anode (+)
8	SYS_LED+	System Front board LED Signal anode (+)
9	HD-	Hard Disk LED Signal cathode(-)
10	SYS_LED-	System Status LED Signal cathode(-)
11	PWR_BTN	Power Button Signal
12	L1_ACT	LAN1 active LED Signal
13	PWR_BTN_GND	Ground
14	L1_LINK-	LAN1 Link LED Signal cathode(-)
15	RST_BTN+	Reset button Signal anode (+)
16	SENSOR_SDA	SMBus Data Signal
17	RST_BTN_GND	Ground
18	SENSOR_SCL	SMBus Clock Signal
19	ID_SW+	ID Switch Signal anode (+)
20	CASE_OPEN-	Chassis intrusion Signal cathode(-)
21	ID_SW-	ID Switch Signal cathode(-)
22	L2_ACT	LAN2 active LED Signal
23	NMI_SW-	NMI switch Signal cathode(-)
24	L2_LINK-	LAN2 Link LED Signal cathode(-)

The front panel design may differ by chassis. A front panel module mainly consists of power switch, reset switch, power LED, hard drive activity LED, speaker and etc. When connecting your chassis front panel module to this header, make sure the wire assignments and the pin assignments are matched correctly.

20) BP_1 (HDD Back Plane Board Hearders)

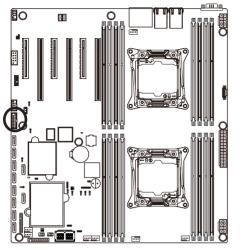

Pin No.	Definition

28) F_AUDIO (Front Panel Audio Header)

The front panel audio header supports Intel High Definition audio (HD) audio. You may connect your chassis front panel audio module to this header. Make sure the wire assignments of the module connector match the pin assignments of the motherboard header. Incorrect connection between the module connector and the motherboard header will make the device unable to work or even damage it.

1 2

9 10

For HD Front Panel Audio:

3	GND

Definition P5V

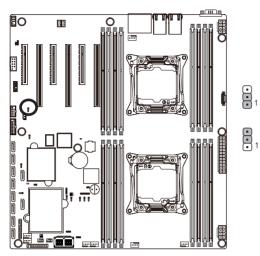

SATA0 Pin7 GND

3) CLR_CMOS (Clearing CMOS Jumper)

Use this jumper to clear the CMOS values (e.g. date information and BIOS configurations) and reset the CMOS values to factory defaults. To clear the CMOS values, place a jumper cap on the two pins to temporarily short the two pins or use a metal object like a screwdriver to touch the two pins for a few seconds.

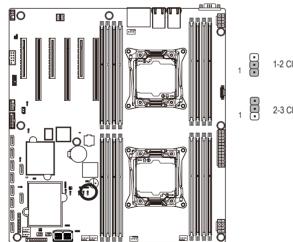

4) S3_MASK (S3 Power On Select Jumper)

- 1-2 Close: Stop an initial power on when BMC is not ready.
- 2-3 Close: Keep initial power on. (Default setting)

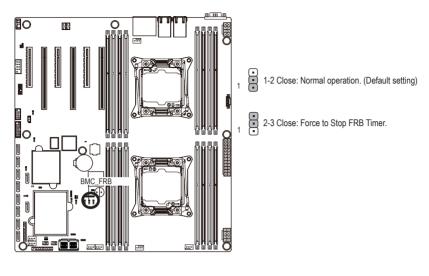

5) ME_UPDATE (ME Update Jumper)

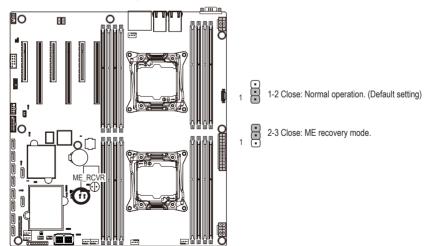

1-2 Close: Normal operation (Default setting)

2-3 Close: ME updated.

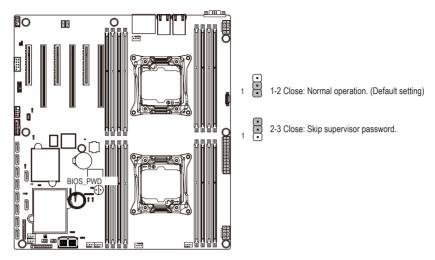

6) BMC_FRB (Force to Stop FRB Timer Jumper)

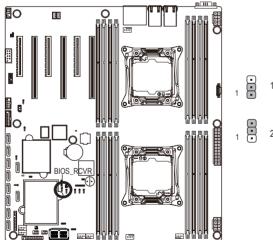

7) ME_RCVR (ME Recovery Jumper)

8) BIOS_PWD (Clearing Supervisor Password Jumper)

9) BIOS_RVCR (BIOS Recovery Jumper)

1-2 Close: Normal operation. (Default setting)

2-3 Close: BIOS recovery mode.

Chapter 2 BIOS Setup

BIOS (Basic Input and Output System) records hardware parameters of the system in the EFI on the motherboard. Its major functions include conducting the Power-On Self-Test (POST) during system startup, saving system parameters and loading operating system, etc. BIOS includes a BIOS Setup program that allows the user to modify basic system configuration settings or to activate certain system features. When the power is turned off, the battery on the motherboard supplies the necessary power to the CMOS to keep the configuration values in the CMOS.

To access the BIOS Setup program, press the <F2> key during the POST when the power is turned on.

- BIOS flashing is potentially risky, if you do not encounter problems of using the current BIOS version, it is recommended that you don't flash the BIOS. To flash the BIOS, do it with caution. Inadequate BIOS flashing may result in system malfunction.
- It is recommended that you not alter the default settings (unless you need to) to prevent system
 instability or other unexpected results. Inadequately altering the settings may result in system's
 failure to boot. If this occurs, try to clear the CMOS values and reset the board to default values.
 (Refer to the Exit section in this chapter or introductions of the battery/clearing CMOS jumper in
 Chapter 1 for how to clear the CMOS values.)

BIOS Setup Program Function Keys

	-
<←><→>	Move the selection bar to select the screen
<↑><↓>	Move the selection bar to select an item
<+>	Increase the numeric value or make changes
<->	Decrease the numeric value or make changes
<enter></enter>	Execute command or enter the submenu
<esc></esc>	Main Menu: Exit the BIOS Setup program
	Submenus: Exit current submenu
<f1></f1>	Show descriptions of general help
<f3></f3>	Restore the previous BIOS settings for the current submenus
<f9></f9>	Load the Optimized BIOS default settings for the current submenus
<f10></f10>	Save all the changes and exit the BIOS Setup program

Main

This setup page includes all the items in standard compatible BIOS.

Advanced

This setup page includes all the items of AMI BIOS special enhanced features.

(ex: Auto detect fan and temperature status, automatically configure hard disk parameters.)

Intel RC Setup

This setup page includes all the submenu options for configuring the function of processor, network, North Bridge, South Bridge, and System event logs.

Event Logs

This setup page provides items for configuration of Smbios Event Log settings and display the Smbios event logs information.

Security

Change, set, or disable supervisor and user password. Configuration supervisor password allows you to restrict access to the system and BIOS Setup.

A supervisor password allows you to make changes in BIOS Setup.

A user password only allows you to view the BIOS settings but not to make changes.

Boot

This setup page provides items for configuration of boot sequence.

Save & Exit

Save all the changes made in the BIOS Setup program to the CMOS and exit BIOS Setup. (Pressing <F10> can also carry out this task.)

Abandon all changes and the previous settings remain in effect. Pressing <Y> to the confirmation message will exit BIOS Setup. (Pressing <Esc> can also carry out this task.)

2-1 The Main Menu

Once you enter the BIOS Setup program, the Main Menu (as shown below) appears on the screen. Use arrow keys to move among the items and press <Enter> to accept or enter other sub-menu.

Main Menu Help

The on-screen description of a highlighted setup option is displayed on the bottom line of the Main Menu.

Submenu Help

While in a submenu, press <F1> to display a help screen (General Help) of function keys available for the menu. Press <Esc> to exit the help screen. Help for each item is in the Item Help block on the right side of the submenu.

When the system is not stable as usual, select the **Restore Defaults** item to set your system to its defaults.

The BIOS Setup menus described in this chapter are for reference only and may differ by BIOS version.

∽ COM1/COM2/Serial Over AN Console Redirection Settings

Console Redirection (Note)

Select whether to enable console redirection for specified device. Console redirection enables users to manage the system from a remote location.

Options available: Enabled/Disabled. Default setting is **Disabled**.

Console Redirection Settings

∽ Terminal Type

Select a terminal type to be used for console redirection. Options available: VT100/VT100+/ANSI /VT-UTF8. Default setting is **ANSI**.

☞ Bits per second

Select the baud rate for console redirection. Options available: 9600/19200/38400/57600/115200. Default setting is **115200**.

⑦ Data Bits

Select the data bits for console redirection. Options available: 7/8. Default setting is 8.

∽ Parity

A parity bit can be sent with the data bits to detect some transmission errors. Even: parity bi is 0 if the num of 1's in the data bits is even. Odd: parity bit is 0 if num of 1's in the data bits is odd. Mark: parity bit is always 1. Space: Parity bit is always 0. Mark and Space Parity do not allow for error detection. Options available: None/Even/Odd/Mark/Space. Default setting is **None**.

☞ Stop Bits

Stop bits indicate the end of a serial data packet. (A start bit indicates the beginning). The standard setting is 1 stop bit. Communication with slow devices may require more than 1 stop bit. Options available: 1/2. Default setting is 1.

☞ Flow Control

Flow control can prevent data loss from buffer overflow. When sending data, if the receiving buffers are full, a 'stop' signal can be sent to stop the data flow. Once the buffers are empty, a 'start' signal can be sent to re-start the flow. Hardware flow control uses two wires to send start/stop signals. Options available: None/Hardware RTS/CTS. Default setting is **None**.

∽ VT-UTF8 Combo Key Support ^(Note)

Enable/Disable VT-UTF8 Combo Key Support.

 $\label{eq:options} Options \ available: \ Enabled/Disabled. \ Default \ setting \ is \ Enabled.$

→ Recorder Mode (Note)

When this mode enabled, only text will be send. This is to capture Terminal data. Options available: Enabled/Disabled. Default setting is **Disabled**.

∽ Resolution 100x31 ^(Note)

Enables or disables extended terminal resolution. Default setting is **Enabled**. Options available: Enabled/Disabled.

∽ Legacy OS Redirection Resolution ^(Note)

On Legacy OS, the number of Rows and Columns supported redirection. Options available: 80x24/80X25. Default setting is **80x24**.

∽ Putty KeyPad (Note)

Select function FunctionKey and KeyPad on Putty. Options available: VT100/LINUX/XTERMR6/SCO/ESCN/VT400. Default setting is **VT100**.

∽ Redirection After BIOS POST (Note)

This option allows user to enable console redirection after O.S has loaded. Options available: Always Enable/Boot Loader. Default setting is **Always Enable**.

Out-of-Bnad Mgmt Port

Microsoft Windows Emerency Management Service (EMS) allows for remote management of a Windows Server OS through a serial port.

Options available: COM1/COM2. Default setting is COM1.

⁽Note) Advanced items prompt when this item is defined.

∽ PCI Express Slot #1/#2/#3/#4/#5/#6 I/O ROM

When enabled, This setting will initialize the device expansion ROM for the related PCI-E slot. Options available: Enabled/Disabled. Default setting is **Enabled**.

∽ Onboard LAN#1/#2 Controller

Enable/Disable onboard LAN devices. Options available: Enabled/Disabled. Default setting is **Enabled**.

∽ Onboard LAN #1/#2 I/O ROM

Enable/Disable onboard LAN devices and initialize device expansion ROM. Options available: Enabled/Disabled. Default setting is **Enabled**.

∽ PCI Devices Common Settings

☞ PCI Latency Timer

Value to be programmed into PCI Latency Timer Register. Options available: 32 PCI Bus Clocks/64 PCI Bus Clocks/96 PCI Bus Clocks/128 PCI Bus Clocks/160 PCI Bus Clocks/192 PCI Bus Clocks/224 PCI Bus Clocks/248 PCI Bus Clocks/. Default setting is **32 PCI Bus Clocks**.

☞ VGA Palette Snoop

Enable/Disable VGA Palette Tegisters Snooping. Options available: Enabled/Disabled. Default setting is **Disabled**.

∽ Above 4G Decoding

Enable/Disable Above 4G Decoding. Options available: Enabled/Disabled. Default setting is **Disabled**.

∽ SR-IOV Support

If system has SR-IOV capable PCIe Devices, this option enables or disables Single Root IO Virtualization Support.

Options available: Enabled/Disabled. Default setting is **Disabled**.

∽ PCI Express Settings

Press [Enter] for configuration of advanced items.

☞ PCI Hot-Plug Settings

Press [Enter] for configuration of advanced items.

2-2-3-1 PCI Express Settings

Advanced	Bios Setup Utility	
PCI Express Device Register Settings Relaxed Ondering Extended Tag No Snoop Maximum Payload	(Disabled) (Disabled) (Enabled) (Auto)	Enables or Disables PCI Express Device Relaxed Ordering.
PCI Express Link Register Settings Extended Synch	[Disabled]	
Link Training Retry Link Training Timeout (uS) Unpopulated Links	[5] 1000 [Keep Link ON]	
		<pre>++: Select Screen f1: Select Item Enter: Select +/-: Change Opt. F1: General Help F3: Previous Values F9: Optimized Defaults F10: Save & Exit ESC: Exit</pre>

PCI Express Device Register Settings

☞ Relaxed Ordering

Enable/DIsable PCI Express Device Relaxed Ordering feature. Options available: Enabled/Disabled. Default setting is **Disabled**.

☞ Extended Tag

When this feature is enabled, the system will allow device to use 8-bit Tag field as a requester. Options available: Enabled/Disabled. Default setting is **Disabled**.

ా No Snoop

Enable/Disable PCI Express Device No Snoop option. Options available: Enabled/Disabled. Default setting is **Enabled**.

Maximum Payload

Set maximum payload for PCI Express Device or allow system BIOS to select the value. Options available: Auto/128 Bytes/256 Bytes/512 Bytes/1024 Bytes/2048 Bytes/4096 Bytes. Default setting is **Auto**.

∽ PCI Express Link Register Settings

☞ Extended Synch

When this feature is enabled, the system will allow generation of Extended Synchronization patterns. Options available: Enabled/Disabled. Default setting is **Disabled**.

∽ Link Training Retry

Define the number of Retry Attempts software wil take to retrain the link if previous training attempt was unsuccessful. Press <+> / <-> keys to increase or decrease the desired values. Options available: Disabled/2/3/5.Default setting is **5**.

∽ Link Training Timeout (us)

Define the number of Microseconds software will wait before polling 'Link Training' bit in Link Status register. Press <+> / <-> keys to increase or decrease the desired values. Value rang is from 10 to 10000 us.

When this item is set to 'Disable Link, the system will operate power save feature for those unpopulated PCI Express links.

Options available: Keep Link ON/ Disable Link. Default setting is Keep Link ON.

2-2-3-2 PCI Hot-Plug Settings

Advanced	Bios Setup Utility	
PCI Hot-Plug Settings BIOS Hot-Plug Support PCI Buses Padding I/O Resources Padding MMIO 32 bit Resources Padding PFMMIO 32 bit Resources Padding	[Enabled] [1] [4 K] [16 M] [16 M]	If ENABLED allows BIOS build in Hot-Pug support. Press [Enter] for configuration of advanced items.

Processor Socket/Processor ID/Processor Frequency/Processor Max Raito/ Processor Min Raio/Microcode Revision/L1 Cache RAM/L2 Cache RAM/L3 Cache RAM/ Processor 0/1Version

Displays the technical specifications for the installed processor.

∽ Hyper-Threading [All]

The Hyper Threading Technology allows a single processor to execute two or more separate threads concurrently. When hyper-threading is enabled, multi-threaded software applications can execute their threads, thereby improving performance.

Options available: Enabled/Disabled. Default setting is Enabled.

☞ Execute Disable Bit

When enabled, the processor prevents the execution of code in data-only memory pages. This provides some protection against buffer overflow attacks.

When disabled, the processor will not restrict code execution in any memory area. This makes the processor more vulnerable to buffer overflow attacks.

Options available: Enabled/Disabled. Default setting is **Enabled**.

∽ Enable Intel TXT Support

Enable/Disable Intel Trusted Execution Technology support function. Options available: Enabled/Disabled. Default setting is **Disabled**.

∽ VMX (Vanderpool Technology)

Enable/Disable Vanderpool Technology. This will take effect after rebooting the system. Options available: Enabled/Disabled. Default setting is **Enabled**.

☞ Enable SMX (Intel Safer Mode Extensions Technology)

Enable/Disblae Intel Safer Mode Extensions (SMX) support function. Options available: Enabled/Disabled. Default setting is **Disabled**.

→ Hardware Prefetcher

Select whether to enable the speculative prefetch unit of the processor. Options available: Enabled/Disabled. Default setting is **Enabled**.

∽ Adjacent Cache Line Prefetch

When enabled, cache lines are fetched in pairs. When disabled, only the required cache line is fetched. Options available: Enabled/Disabled. Default setting is **Enabled**.

→ DCU Streamer Prefetch

Enable prefetch of next L1 Data line based upon multiple loads in same cache line. Options available: Enabled/Disabled. Default setting is **Enabled**.

C DCU IP Prefetch

Enable prefetch of next L1 Data line based upon sequential load history. Options available: Enabled/Disabled. Default setting is **Enabled**.

DCU Mode

Configure DCU mode.

Options available: 32KB 8Way Without ECC/16KB 4Way With ECC. Default setting is **32KB 8Way Without ECC**.

Direct Cache Access (DCA)

Options available: Auto/Enabled/Disabled. Default setting is Auto.

→ DCA Prefetch Delay

Options available: Disabled/8/16/24/32/40/48/56/64/72/80/88/96/104/112. Default setting is 32.

ං X2APIC

Options available: Enabled/Disabled. Default setting is Disabled.

ං AES-NI

Enable/Disable AES-NI (Intel Advanced Encryption Standard New Instructions) support function. Options available: Enabled/Disabled. Default setting is **Enabled**.

Press [Enter] for configuration of advanced items.

∽ CPU T State Control

Press [Enter] for configuration of advanced items.

2-3-2-1 CPU P State Control

IntelRCSetup	Bios Setup Utility	
CPU P State Control EIST (P-states) Turbo Mode P-state coordination	[Enable] [Enable] [HW_ALL]	When enabled, OS sets CPU frequency according load. When disabled, CPU frequency is set at max non-turbo.
		++: Select Screen 1: Select Item Enter: Select +/-: Change Opt. F1: General Help F3: Previous Values F9: Optimized Defaults F10: Save & Exit ESC: Exit

☞ EIST (P-State)

Conventional Intel SpeedStep Technology switches both voltage and frequency in tandem between high and low levels in response to processor load.

Options available: Enabled/Disabled. Default setting is Enabled.

Turbo Mode

When this item is enabled, tje processor will automatically ramp up the clock speed of 1-2 of its processing cores to improve its performance.

When this item is disabled, the processor will not overclock any of its core.

Options available: Enabled/Disabled. Default setting is Enabled.

P-state coordination

In HW_ALL mode, the processor hardware is responsible for coordinating the P-state among logical processors dependencies. The OS is responsible for keeping the P-state request up to date on all logical processors.

In SW_ALL mode, the OS Power Manager is responsible for coordinating the P-state among logical processors with dependencies and must initiate the transition on all of those Logical Processors. In SW_ANY mode, the OS Power Manager is responsible for coordinating the P-state among logical processors with dependencies and may initiate the transition on any of those Logical Processors. Options available: HW_ALL/SW_ALL/SW_ANY. Default setting is **HW_ALL**.

2-3-2-2 CPU C State Control

IntelRCSetup	Bios Setup Utility	
CPU C State Control		Package C State limit
Package C State limit CPU C3 report CPU C6 report	[C6(Retention) state] [Disable] [Enable]	++: Select Screen 14: Select Item Enter: Select +/-: Change Opt. F1: General Help F3: Previous Values F9: Optimized Defaults F10: Save & Exit ESC: Exit

☞ Package C State Limit

Configure state for the C-State package limit. Options available: C0/C1 state/C2 state/C6(non Retention) state/C6(Retention) state. Default setting is **C6(non Retention) state**.

→ CPU C3/C6 Report

Allows you to determine whether to let the CPU enter C3/C6 mode in system halt state. When enabled, the CPU core frequency and voltage will be reduced during system halt state to decrease power consumption. The C3/C6 state is a more enhanced power-saving state than C1. Default setting for C3 is **Disabled**; default setting for C6 is **Enabled**.

2-5 Security Menu

The Security menu allows you to safeguard and protect the system from unauthorized use by setting up access passwords.

	kit
Password Description	Set Administrator Password
If ONLY the Administrator's password is set, then this only limits access to Setup and is only asked for when entering Setup. If ONLY the User's password is set, then this is a power on password and must be entered to boot or enter Setup. In Setup the User will have Administrator rights. The password length must be in the following range:	
Minimum length 3	
Maximum length 20	++: Select Screen ↑↓: Select Item
Administrator Password User Password	Enter: Select +/-: Change Opt. F1: General Help
▶ Secure Boot menu	F3: Previous Values F3: Optimized Defaults F10: Save & Exit ESC: Exit

∽ Administrator Password

Press Enter to configure the Administrator password.

∽ User Password

Press Enter to configure the user password.

∽ Secure Boot menu

Press [Enter] for configuration of advanced items.

2-5-1 Secure Boot menu

The Secure Boot Menu is applicable when your device is installed the Windows® 8 operatin system.

Bios Setup Utility Security		
System Mode Secure Boot Secure Boot Secure Boot Mode ▶ Key Management	Setup Not Active [Disabled] [Custom]	Secure Boot can be enabled if 1.System running in User mode with enrolled Platform Key(PK) 2.CSM function is disabled
		++: Select Screen 14: Select Item Enter: Select +/-: Change Opt. F1: General Help F3: Previous Values F9: Optimized Defaults F10: Save & Exit ESC: Exit

∽ Secure Mode

Display the System secure mode state.

∽ Secure Boot

Display the status of Secure Boot.

Secure Boot

Enable/Disable Secure Boot function.

Options available: Enabled/Disabled. Default setting is Disabled.

∽ Secure Boot Mode

Secure Boot requires all the applications that are running during the booting process to be pre-signed with valid digital certificates. This way, the system knows all the files being loaded before Windows 8 loads and gets to the login screen have not been tampered with.

When set to Standard, it will automatically load the Secure Boot keys form the BIOS databases.

When set to Custom, you can customize the Secure Boot settings and manually load its keys from the BIOS database.

Options available: Standard/Custom. Default setting is Custom.

☞ Key Management^(Note)

Press [Enter] for configuration of advanced items.

2-5-1-1 Key Management

		Install Factory default Secure Boot Keys when
Enroll All Factory Default Keys Save All Secure Boot Variable		System is in Setup Mode.

Default Key Provisioning

Force the system to Setup Mode. This will clear all Secure Boot Variables such as Platform Key (PK), Key-exchange Key (KEK), Authorized Signature Database (db), and Forbidden Signaures Database (dbx). Options available: Enabled/Disabled. Default setting is **Disabled**.

C Enroll All Factory Default Keys

Press [Enter] to install all factory default keys.

∽ Save All Secure Boot Variables

Press [Enter] to save all Secure Boot Variables.

∽ Platform Key (PK)

Display the status of Platform Key.

∽ Delete the PK

Press [Enter] to delete the existed PK. Once the PK is deleted, all the system's Secure Boot keys will not be activated.

∽ Set new PK File

Press [Enter] to configure a new PK.

∽ Key Exchange Key Database (KEK)

Display the status of Platform Key.

つ Delete KEK

Press [Enter] to delete the KEK from your system.

∽ Set new KEK

Press [Enter] to configure a new KEK.

∽ Append Var to KEK

Press [Enter] to load additional KEK from a storage devices for an additional db and dbx management.

∽ Authorized Signature Database (DB)

Display the status of Authorized Signature Database.

つ Delete DB

Press [Enter] to delete the db from your system.

으 Set new DB

Press [Enter] to configure a new db.

∽ Append aVar to DB

Press [Enter] to load additional db from a storage devices.

∽ Forbidden Signature Database (DBX)

Display the status of Forbidden Signature Database.

∽ Delete the DBX

Press [Enter] to delete the dbx from your system.

∽ Set DBX from File

Press [Enter] to configure a new dbx.

∽ Append Var to DBX

Press [Enter] to load additional db from a storage devices.

2-6 Boot Menu

The Boot menu allows you to set the drive priority during system boot-up. BIOS setup will display an error message if the legacy drive(s) specified is not bootable.

Bios Setup Utility Main Advanced IntelRCSetup Event Logs Security <mark>Boot</mark> Save & Exit		
Boot Configuration Setup Promot Timeout Bootup NumLock State Quiet Boot	1 [On] [Enabled]	Number of seconds to wait for setup activation key. 65535(0xFFFF) means indefinite waiting.
Boot Option Priorities Boot Option #1 Boot Option #2 Boot Option #3 Boot Option #4	[UEFI: ADATA USB Flash D] [ADATA USB Flash Drive 0.00] [IBA GE Slot 0700 v1553] [UEFI: Built-in EFI Shell]	
Network Device BBS Priorities Hand Drive BBS Priorities		<pre>++: Select Screen 11: Select Item Enter: Select +/-: Change Opt. F1: General Help F3: Previous Values F9: Optimized Defaults F10: Save & Exit ESC: Exit</pre>

∽ Boot Configuration

∽ Setup Prompt Timeout

Number of seconds to wait for setup activation key. 65535(0xFFF) means indefinite waiting." Press the numberic keys to input the desired value.

∽ Bootup NumLock State

Enable or Disable Bootup NumLock function. Options available: On/Off. Default setting is **On**.

그 Quiet Boot

Enables or disables showing the logo during POST. Options available: Enabled/Disabled. Default setting is **Enabled**.

∽ Boot Option Priorities

Boot Option #1/#2/#3#4

Press Enter to configure the boot priority.

By default, the server searches for boot devices in the following secquence:

- 1. UEFI device.
- 2. Hard drive.
- 3. Network device.
- 4. USB device

- Network Device BBS Priorities
 Press Enter to configure the boot priority.
- Hard Drive BBS Priorities
 Press Enter to configure the boot priority.

2-7 Save & Exit Menu

The Exit menu displays the various options to quit from the BIOS setup. Highlight any of the exit options then press **Enter**.

Main Advanced IntelRCSetup Event	ios Setup Utility gs Security Boot Save & Exit
Save Changes and Exit Discard Changes and Exit	Exit system setup after saving the changes.

2-9-2 DEX Beep Codes

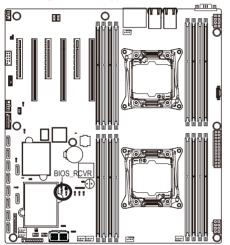

# of Beeps	Description
1	Invalid password
4	Some of the Architectural Protocols are not available
5	No Console Output Devices are found
5	No Console Input Devices are found
6	Flash update is failed
7	Reset protocol is not available

2-10 BIOS Recovery Instruction

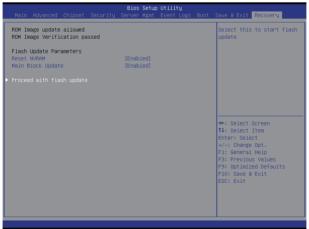

The system has an embedded recovery technique. In the event that the BIOS becomes corrupt the boot block can be used to restore the BIOS to a working state. To restore your BIOS, please follow the instructions listed below:

Recovery Instruction:

- 1. Change xxx.ROM to amiboot.rom.
- 2. Copy amiboot.rom and AFUDOS.exe to USB diskette.
- 3. Setting BIOS Recovery jump to enabled status.

- 4. Boot into BIOS recovery.
- 5. Run Proceed with flash update.
- 6. BIOS update.

Chapter 3 Appendix

3-1 Regulatory Statements

Regulatory Notices

This document must not be copied without our written permission, and the contents there of must not be imparted to a third party nor be used for any unauthorized purpose. Contravention will be prosecuted. We believe that the information contained herein was accurate in all respects at the time of printing. GIGABYTE cannot, however, assume any responsibility for errors or omissions in this text. Also note that the information in this document is subject to change without notice and should not be construed as a commitment by GIGABYTE.

Our Commitment to Preserving the Environment

In addition to high-efficiency performance, all GIGABYTE motherboards fulfill European Union regulations for RoHS (Restriction of Certain Hazardous Substances in Electrical and Electronic Equipment) and WEEE (Waste Electrical and Electronic Equipment) environmental directives, as well as most major worldwide safety requirements. To prevent releases of harmful substances into the environment and to maximize the use of our natural resources, GIGABYTE provides the following information on how you can responsibly recycle or reuse most of the materials in your "end of life" product.

Restriction of Hazardous Substances (RoHS) Directive Statement

GIGABYTE products have not intended to add and safe from hazardous substances (Cd, Pb, Hg, Cr+6, PBDE and PBB). The parts and components have been carefully selected to meet RoHS requirement. Moreover, we at GIGABYTE are continuing our efforts to develop products that do not use internationally banned toxic chemicals.

Waste Electrical & Electronic Equipment (WEEE) Directive Statement

GIGABYTE will fulfill the national laws as interpreted from the 2002/96/EC WEEE (Waste Electrical and Electronic Equipment) directive. The WEEE Directive specifies the treatment, collection, recycling and disposal of electric and electronic devices and their components. Under the Directive, used equipment must be marked, collected separately, and disposed of properly.

WEEE Symbol Statement

The symbol shown below is on the product or on its packaging, which indicates that this product must not be disposed of with other waste. Instead, the device should be taken to the waste collection centers for activation of the treatment, collection, recycling and disposal procedure. The separate collection and recycling of your waste equipment at the time of disposal will help to conserve natural resources and ensure that it is recycled in a manner that protects human health

and the environment. For more information about where you can drop off your waste equipment for recycling, please contact your local government office, your household waste disposal service or where you purchased the product for details of environmentally safe recycling.

- When your electrical or electronic equipment is no longer useful to you, "take it back" to your local or regional waste collection administration for recycling.
- If you need further assistance in recycling, reusing in your "end of life" product, you may contact us at the Customer Care number listed in your product's user's manual and we will be glad to help you with your effort.

Finally, we suggest that you practice other environmentally friendly actions by understanding and using the energy-saving features of this product (where applicable), recycling the inner and outer packaging (including shipping containers) this product was delivered in, and by disposing of or recycling used batteries properly. With your help, we can reduce the amount of natural resources needed to produce electrical and electronic equipment, minimize the use of landfills for the disposal of "end of life" products, and generally improve our quality of life by ensuring that potentially hazardous substances are not released into the environment and are disposed of properly.
